Have them look in the computer. RS appears to be driving away the better
employees at a frightening rate & the clearance prices aren't always posted on
time. Or at all in some places.

Does anyone know which freq or TRS the Plymouth, Mi. Fire Dept. is using?
Also, does anyone know the citation for the Michagan Scanner Law? Or where I
can get a copy?

John

They're still using the Western Wayne County freq of 154.37
Hmmmm...it's been so long I forget what "Base" they are on that one.
I know Northville is 20, I keep want to think maybe they're 17.
Oh well...I will be corrected I'm sure.
As far as scanners in autos in mi, don't do it without a ham ticket, or
other prior approval.
Or, just don't get caught :-)

I strongly agree! I have a pair of $20 headphones, and the only way to make them serviceable is to use earplugs UNDER the headphones. On the other hand, my "Solution 2" headphones from Frequency Fan are great. They work well even at the very noisy Bristol track.

Jack

Think you are looking for a mod where to receive "no-no" signals by
switching the band control lines?
Information is shown how to do that and many other models is shown in the
Orange Book of Scanner Repair which is available at
http://www.kenselectronics.com/books/orangebook.html
Caution: such modifications may be done only if you live outside the USA.

While hearing a couple have "phone sex" with each other I started to record (I know wrong) because my buddies with scanners said that they had never ever heard anything like that. Well, when they were very, very close to "done", it turned out that she had a husband and he just walked into the room. As you can geuss that sort of ruined it for him, but after her husband left she continued. Can you belive that? We laughed for hours and hours.....

: direction finding using it. I expect such an antenna would be fairly
: narrow band, but that's okay. Does anyone know how to build such a thing
: or know where to find plans to do so?

For a cheap start, you can use a TV antenna.
Even, if not tuned for the band, it will give you a direction
if the signal you're after is strong enough to be received
with it.

Otherwise nearly any book on HAM antennas will do.

Regards,
Friedhelm

: military aircraft radios stronger/travel further?
: Thanks

In addition to what the other posters have sugusted, as a personal tip:
You should considder investing a few $'s into a telescope antenna,
like those sold by RatShack (the one with the little coil in the middle).
You have to "adjust" it to the propper lenght.
I found it to be a big improvement over the rubber duck, while not
taking away all your money.

I don't have the Lincoln Park Zoo Freqs. but I do have the Brookfield Zoo Freqs.

463.6875 Zoo Police
464.6875 Zoo Keepers and related staff
Just a note:
Squads are numbers as follows:
181 Primary response and general patrol
182 Back-up and general patrol
183 Sgt.'s and general patrol
184 General patrol and night shift use. A Ford Bronco.

Signals:
Signal 13 Emergency
Signal 15 Minor First-Aid Calls
Signal 21 A Weapons call
Signal 27 Squad leaving park grounds on a detail.
Signal 69 A funny money call

Hope you can use these....

22. Dallas / Fort Woth Area Scanner Mailing List Started!!!

Newsgroup: rec.radio.scanner
Date: 1998-06-01 00:00:00 UTC
From: "Lindsay C. Blanton" <lblant1@airmail.net>
Message-ID: <6kvria$l14@dfw-ixnews6.ix.netcom.com>
Source record: 158829

Hello everyone,

Due to lots of requests for a mailing list for the Dallas Ft. Worth area regarding trunked radio communications and scanner listening, I have created a mailing list for folks in the DFW area.

This list will be for discussing DFW's communications systems in detail. If you are interested in coorisponding with folks in the DFW area, now is your chance!

Point your browsers to:
http://www.onelist.com/isregistered.cgi?listname=dfwscan

...and follow the instructions to subscribe to the list.

Thanks!
-Lb

It seems as though the page "type" isn't quite right. Instead of
letting the program pick the page type (alpha vs. numeric) try
forcing it to one or the other.

It is a 7 A 4. I remember having a bit of a problem a few years ago and
like an idiot, thought that I'd clear everything out and start over.
Now I can't get it to take again. Maybe it is the length of time. Can
anyone give detail other than holding "2" "9" and "L/OUT" while turning
on the unit?

I did the pro-51 squelch trail mod, works great!

I did want to say that if you put a piece of black tape UNDER the resistor, it will protect it from shorting to the other parts of the board.

anyone else have any pro-51 mods??? (I didn't think my hands would hold still long enough to do the soldering...jesus that is small stuff!)

Will

40. BC 200 XLT Help Please

Newsgroup: rec.radio.scanner
Date: 1998-06-01 00:00:00 UTC
From: zoomr@skypoint.com
Message-ID: <35721962.1762158@news.skypoint.com>
Source record: 158887

On my BC200XLT the display and keypad are working, but the audio, RF, and dial light on/off button don't function. I can tell that it is not receiving because turning the squelch to any position will not stop it from scanning, even when there is a strong signal on the frequency.

The oddest thing is the dial light not working - it's as though the digital circuits are working, but anything that is analog doesn't work. Not even a click out of the audio when I turn it on. I tried resetting with 2,9, manual but that didn't help. I measured that battery pack voltage and it is a little high at 7.5 Volts, but there is no battery indicator flashing.

Any ideas about what might fix it would be greatly appreciated!

[snip]

I see you've gotten a couple of replies. I'd keep away from the $20 Radio Shack phones; they have no soundproofing qualities.

The kind you're looking for begin at about $60. You can make something for a lot less. Get a good set of cup-type hearing protectors (NRR of at least 25) at a hardware store or gun shop. Those will run $15 to $20. Then get some "ear bud" lightweight headphones - the kind that stick in your ears with no headband. Put those on, then the hearing protectors on top.

Yeah, well owning a CB linear amplifier isn't illegal
either. But if one is found in your possession, the
FCC will presume you to have used it, leaving you to
suck rocks and whistle "Dixie".

BTW, if you are not a lawyer, you would be well advised
to not tell people what is legal. They can act on your
advise and if they get shat upon, they can come after
you for giving them erroneous legal advise.

Oddly, you can tell people something is illegal all day
long and suffer no liability.

Caution is advised when dispensing legal advice.

Hello all,
I'm having trouble tapping my discriminator output pin (IC 2, TP2) as outlined in Bill Cheeks file. I get a lot of static with the signal (too much I fear) and disconnecting my ground lead has no effect. Should the baseband audio be relatively quiet, or is a certain amount of static normal? Volume and squelch have no effect on this signal. Do I need a ground tap off of the circuit? If so, where is a good tap point? What about capacitors, Bill recommends a tantalum but I substituted an electrolytic, no problem there, right? I connected the + leg to TP2, right again? Any of you who have successfully tapped a 2035/2042 your input would be most appreciated. Thanks

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

This is what you get when you elect liberal idiots who seek to disarm
the citizens. Just remember this: NEVER ELECT A DEMOCRAT TO OFFICE.
And, NEVER ELECT A LIBERAL REPUBLICAN!
The goofy liberal in Louisana who has pushed the anti-scanner bills
is a prime example of the kind of person you must dump before your
rights are harmed. But, liberals use welfare to buy votes with, so they
always have a bunch of people addicted to welfare who will vote for them
so that the check will keep a coming in da mail box.
NEVER ELECT A LIBERAL!

Are you certain that your on the right leg of the chip? Is there a
soilder joint problem? Are you on the right chip for certain? Buy a
new LM741 and pitch the one youve got. There are lots of possiblities.

What are the rules pertaining to the usage of a marine radio.
The general rule I have heard is that you must be within 15 miles of
water to use them.

Does anyone know the if this is true?

Hello All,

SWL.NET has Been Kind enough to Provide Web Space on swl.net for The Orlando Florida Trunktracking Page.

This Page Covers the Following areas of Central Florida:
Orange County
Orlando
Winter Park
Maitland
Ocoee
Winter Garden
Walt Disney's 800 Motorola system
Osceola County
Seminole County
and Many other Municipalities in these areas

The new site is faster and does not have the annoying ad from tripod
go to http://ns4.swl.net/orlandotrunking/

Thank you

Jason

62. What is programmable CTCSS?

Newsgroup: rec.radio.scanner
Date: 1998-06-01 00:00:00 UTC
From: "Philip J. Smith" <psmith@appliedsystems.com>
Message-ID: <6ku8pb$88i$1@nntp3.interaccess.com>
Source record: 158959

Suzanne,

CTCSS stands for Continuous Tone Control Squelch System. Many (if not most) public safety and commercial 2-way comms are accompanied by a continuous sub-audible tone from 67 to 250 Hz. Receivers will not open the squelch unless this tone, of proper frequency, is detected. You should be able to hear these low-frequency tones with a good pair of headphones. Most public safety licensees in the 150's and 400's use CTCSS.

This option quickly became a necessity for me. On a frequency for the village I live in, there is also digital pager signal originating 40 miles away that causes CTCSS-less scanners to stop scanning. With the village's correct CTCSS tone programmed, the scanner skips over the pager signal without a sound.

CTCSS is called PL (Private Line) by some hobbyists, which is a trademarked name.

Philip Smith

63. New PHSSCANNER Email List Formed

Newsgroup: rec.radio.scanner
Date: 1998-06-01 00:00:00 UTC
From: jcardani@erols.com
Message-ID: <3572a4b5.4136966@news.tju.edu>
Source record: 158960
Cross-posted to: rec.radio.scanner,alt.radio.scanner,phl.scanner

Hi Everyone,

Thanks so much for your cooperation over the last several years with scanner related information! Last week I created a new email List forum for discussing radio scanner information in the Philadelphia Area called the PHLSCANNER List. This list would be a convenient way to share frequencies and other scanner related information for the Philly area. Specifically, the scope of the list is scanner related communications generally above 30 mhz and covering southeastern PA, southern NJ, and northern Delaware. Conventional systems as well as trunked
systems (including Trunk Tracker info); analog and digital modulation techniques will also be within the scope of this list. I am the list owner of the phlscanner email list.

I really hope that this list would allow us to discuss the above scanner related topics in a timely manner. This list will augment (not replace) the phlscanner news group. However there are several advantages to the list forum. First it is usually quicker than usenet news groups. Also I will not tolerate SPAM of any kind nor off topic posts (which always plagued the phlscanner news group). Also,
we can discuss topics a bit more freely than on the news group since this list is a controlled environment - I know who is subscribed at any given time and can terminate a user from participation if warranted.

Please take a moment to subscribe (free of course) to the phlscanner mailing list by simply clicking on the following link:

http://www.onelist.com/subscribe.cgi/phlscanner

Prior to subscribing, you would first need to register with onelist by entering your email address, a password (to authenticate yourself), and answering a few demographic questions. When you subscribe, you would need to choose whether you want the emails single/normal version (each time someone posts to the list you will get the email sent to you) or in a daily digest version (all posts are accumulated daily and sent to you bundled in a digest). I prefer using the later digest version.

Once you are subscribed, you post to the phlscanner list by sending an email message to the following address:

phlscanner@onelist.com

For their first post, I would request that everyone introduce themselves to the list. Please mention if you work for a Public Safety agency and what scanner equipment you use and any other notable specialty. Thanks!

You can also easily view archives of the phlscanner list. The URL for that is:

http://www.onelist.com/archives.cgi/phlscanner

The list server is maintained free by onelist. There are several good FAQs within their Help Center on their site. http://www.onelist.com

Thanks again for reading this and I hope you all take a few minutes to subscribe to the phlscanner list. I promise to do my best to keep the forum interesting, timely, and on track.

If you have any questions about how to subscribe or post or any general questions, you can either check the FAQ on the ONELIST site or email me.

thanks,

Joe Cardani

From: no@mail.please
Message-ID: <35ab9b96.4469771@ladder01.news.aol.com>
Source record: 158963

Just this morning on my way in to the office. I hear the MA state police (C4 on the old lowband) calling to any cruiser on 495S in the Hopkington area.

Dispatch calls to the answering cruiser:

"I have a TT [tractor trailer] operator on the line with me now and he says there's a black SAAB pulling up next to him and the other truckers. (slight pause) And the operator of the SAAB is naked."

As luck would have it, a cruiser was less than a mile away and they stopped the car within 2 minutes. Turns out this was pretty lucky, because it turns out this guy was from Hopkington and probably would have made it home otherwise as he was within a mile of his exit.

No funny comments from the trooper that made the stop, but they ran a Board of Parole check on this guy and he had a 1982 Indecent Exposure charge..... Gee, I wonder what took him so long to get caught again ?!

A 1496 balanced modulator / de-modulator circuit can
descramble variable frequency inversion.
With a lack of filtering in our DS49 it can decode some
of the split band as well.

Status: RO

If the test freq's (2-9-L/O) will not load, try putting the radio into
display test first, then while the display is cycling, push 2-9-L/O and
hold until the test freq's appear. My radio was coded 12A3 and I had to
do it this way.

.....

TEST MODE 3. Display Test.

Press 2, 9, BAND or 2, 9, MONI.

This put the display in test mode. Every annunciator and
every digit element is turned on in a scan from the left side
of the display to the right. To keep this test mode
continuous, release the buttons before the first scan
finishes. This mode does not affect stored memory. Press any
key to exit this display mode.

There is. By adding (or removing) a diode the 30-50 MHz band will be
changed to 66-88 MHz which it will not receive on without further
mods.

The downside is that the diode is not easy to get to.

:Thanks in advance.

That's a lot like asking where to find plans for
an ultralight aircraft and another set for a
Boeing 747.

A directional antenna for 1 GHz could almost fit
in the palm of your hand. For 30 MHz, it might take
up two rooms in your house.

What frequencies for direction-finding interests you?

Saving up for a new Kenwood ts-570s, so ...

For sale: MINT condition Yupiteru MVT-9000
Non-smoker, radio has never left the house.
I have many references from other radio sales over the Net.

$450 plus shipping

Here's info on the scanner:

Range: 0.5000 - 2036 MHz (no gaps)
Channels: 1000
Banks: 20
Modes: AM, NAM, FM, WFM, USB, LSB, CW
Priority: 10 channels
Conversion: Triple
Scan: 30 channels/second
Search: 30 steps/second
Power : 4 AAs 100V AC 12V DC
Size: 2.6"(W) x 6.1"(H) x 1.6"(D)
Weight: 410g
Features:
2 VFOs, band scope w/marker, auto-store,
alpha-tagging, S-meter search-skip, attenuator

Comes with: Antenna, belt-clip, hand-strap, manual (no box)

: Does anyone know the if this is true?

My recollection from reading a pamphlet on marine radio use is that you must be on the water while using one. That's obvious for a radio mounted on board. The same is mostly true with hand-helds. I don't think you'd be frowned on calling the harbor master etc. while standing on the dock area, but you aren't allowed to use a marine radio at an inland picnic grove etc. for personal communications.

You might try contacting the Coast Guard and asking for more definitive info.

Here's a link that's somewhat useful, but doesn't anwswer the main question:

> baseband audio be relatively quiet, or is a certain amount of static normal?

Static where? What are you using this tap for?
It should not increase the static out of your
speaker and headphones.

> Volume and squelch have no effect on this signal.

That is understandable. The tap is BEFORE the volume and
squelch controls.

> Do I need a ground tap off of the circuit?
> If so, where is a good tap point?

Yes, you need a ground. Any ground is fine.
Chassis ground is good. So is PCB ground.

> What about capacitors, Bill recommends a tantalum but I
> substituted an electrolytic, no problem there, right?

So why did you substitute?

There *can* be problems.....the kind that are hard to
diagnose and ferret out. I recommend tantalum so that
some of these problems never surface.

> I connected the + leg to TP2, right again?

Yes.

> Any of you who have successfully tapped a 2035/2042
> your input would be most appreciated. Thanks

I have.

Now tell me how you know there is all that static? I can't
imagine using the baseband audio for any purpose that involves

LISTENING. The purpose of that tap is to source an unaltered
signal for decoding data from it, etc. You would not ordinarily
listen to that signal.

So what is the problem?

The FCC has a FREE "beta test" site with up-to date freq info in all services...takes a little navigation, but you get ALL the info on each record. Free for now, but they say they plan to charge $2.90 a minute or something via a 900-line once the bugs are worked out...VERY thorough and worthwhile at:

Shortwave is not a mode, it is a frequency range. Form just above MW (AM broadcast band) to below VHF low (SW= Frequency range apx 1.6 Mhc to 30 Mhc)
Mil air is on shortwave(USB mode usually) , but if you want to get SW MIL air use a shortwave Receiver. The scanners that do cover SW do not do it very well, even when compared to an inexpensive SW Receiver.
Mil AIR (in VHF, UHF) freq's is typ. 200 to 400 Mhc
Enjoy,
Charlie

Mil a/c are AM Mode between 200-400 Mhz, so if the scanner can switch
to AM in that range you'll be ok. SW (aka HF) is used mainly on overseas
flights, you'll hear mostly airlines talking to Gander or Shannon as
they cross the Atlantic (sorry I don't recall the Pacific stations!)
I live in Ottawa, Canada and I regularly hear F-16 from Burlington, VT
having training dogfights, AWACS and tankers. Can't hear the ground
station, but because of the altitude of the a/c they will carry a
bit further, in my case 120+ air miles for UHF AM

The world of scanners is most certainly NOT ending. You obviously have absolutely no evidence to support that claim.

As for ham radio, had you been participating in any if the amateur radio activities (of which there were many with many hams attending), you would see that amateur radio is far from over.

See my page (and links to others) on:

http://www.xs4all.nl/~jstuyven/r10

>I assume this scanner is computer controllable to at least the
>extent it is manually controllable? Moreso? Less so?

You can connect a computer via the OPC-478 cable (schematics on one of
the linked pages) to :
1) program the IC-R10 'off-line' and copy all data to memory
2) control the VFO

>Is programming information available? I'd want to write my own
>software. (I run FreeBSD.)

I'm currently working on a Windows 3.11/Windows 95 program. Still
difficult since Icom does *not* supply any information (although a bit
of the CI-V protocol is explained in the manual). If it works I'll be
happy to pass you (and others) all information I gathered (via my
homepage).

You'd be suprised by the demographics of the typical race fan. Consider what is spent on tickets and food and the price of a scanner might not be to unreasonable.

I was at the Phoenix Indy Car race about four years ago and one of the vendor was selling a ton of scanners.

My 200XLT died while I was there and they lent me one for free while they repaired mine. Never even tried to get me to buy a new one and didn't charge me a fortune to fix the thing!

>military aircraft radios stronger/travel further?

You'll hear the aircraft pretty well. The ground stations are another
matter. You probably won't hear them at all.

Frankly, I think you'll be disappointed because you'll only hear the
pilots reading back the controller's instructions, not the whole
conversation. I don't know about you, but I'd get bored pretty
quickly with that situation.

The military aircraft band is not really all that different from the
civilian aircraft band. The signal levels and modulation would be
quite similar from your perspective.

> :cell freqs were in the blocked out 800 MHz. range...?

You are correct. Cellular calls are only in the (now blocked) 824-849
(handset) and 869-894 (base) ranges. "900 MHz" cordless phones may operate
anywhere in the 902-928 MHz range. Most of them use spread spectrum or other
digital modes and can't be heard on a scanner, but some may be analog FM. By
the way, many older doble conversion scanners recieve "images" of the cellular
band 21MHz higher in the 900MHz frequencies.

Rafe:

You pretty much summed up your choices, and for the most part, the PRO-90, and the BC235XLT, are one of the same, on a performance level. The Uniden BC235XLT comes with two rechargeable batteries, and a charging cradle. So it comes down to a cosmetic choice, possibly?

The PRO-91 is less than the PRO-90 in many respects, buy considering Radio Shacks current sale price, if money is a problem, it might be your answer!

My choice would be the BC235XLT.

I'm considering purchasing a frequency capturing device.I was looking at either the Scount or the Cub. There is a $200 dollar difference in the prices.From what i see the Cub has a greater frequency coverage but it will only do one frequency at a time.The Scout can hold up to 400 frequencies.It can also reaction tune a supported radio(i don't have a radio that is supported at this time,Maybe in the future) I would appreciate any and all opinions,bad or good.

E-mail-- Deforger@aol.com
Thanks in advance
Robert

Locate the small circuit board at the lower right-hand corner and
find jumper L201.
Cut it.

Radio now has continuous 806-956 MHz coverage
and 30KHz search increments in the cellular band.

111. PRO 2050 Questions/Jackson, MS

Newsgroup: rec.radio.scanner
Date: 1998-06-02 00:00:00 UTC
From: Chris Mullenix <wmullenix@earthlink.not>
Message-ID: <3574601E.F9CB041F@earthlink.not>
Source record: 158708

Just got the new 2050 TrunkTracker...

Police Call lists over 25 810.xxxx trunked frequencies for the City of Jackson, MS; however the 2050 will not let me enter anything below 850. There are also 25 860.xxxx trunked frequencies listed below the others. The 2050 will let me enter these, and I can listen to (broken) communcations on normal scan mode, but when I switch to TrunkTracker, I hear nothing. It acts as if it can't find the data channel. I can listen to other municipalities trunked systems, however.

My question is...

Is the Data channel in the 810 range? If so, is there a mod to let me enter those frequencies into the trunk tracker?

Does anyone know what type of trunked system / frequencies Jackson, MS uses?

Any help would be appreciated,

Chris Mullenix

Chris;

Unfortunatly Jackson, MS is an Ericsson EDACS system. The Trunktracker
will only work with Motorola systems.

118. TRADE: Pro 2050 TrunkTracker

Newsgroup: rec.radio.scanner
Date: 1998-06-02 00:00:00 UTC
From: Chris Mullenix <wmullenix@earthlink.not>
Message-ID: <35747872.569B4369@earthlink.not>
Source record: 158715

Considering that Jackson, MS is on a Ericsson EDACS system, I don't need this brand new Pro 2050 TrunkTracker. I like the 300mhz aircraft band anyway. I would like to trade for a Pro 2005/6. (Cellular mod NOT necessary). I used to have the 2005 and I don't think they come any better than this.

I know Radio Shack has the 2050 on sale this week, so I will entertain any offer (and make up the difference in cash). Please email me if you're interested.

Thank you,
Chris Mullenix

Hi,

Can anyone who has tapped the baseband audio (before the FM discriminator) in a Pro-43 tell me which of the three levels of the circuit board the relevant chip is on? Also, is it clear which one is pin 9? I have hazy directions and I'd rather desolder as little as possible.

Thanks,
Neil

That sounds like an obscene suggestion to me.
Hey, it's not my fault if your family tree is more
linear than geometric.

If not then you can take advantage of the 2026's normally annoying dual conversion circuitry and pick up cell (not all of course, but enough to have some fun) by searching 896.1125 to 910-920MHz. It will pick up pagers, trunked control channels, data channels and just about every other source of interference imaginable, BUT it will also get cell phones. Just keep jabbing at the search buttons until you get one.

This also works on most Rat Shack and Uniden scanners as well. Don't tell Washington.... Shhhhhh.... ;-)

You friggin' loon: "Excellent point you have brought up, thanks for your support?"

Hey loopy; his "excellent point" is an assertion that your family lineage is comprised of continuous and marrying of brother and sister for generation after generation. The butt of the joke (*YOU* Mackey), is that you're a product of strict inbreeding.

How 'bout I repost the message again? (Maybe this time you'll understand it.)

Although I agree it's an excellent post, It's at your expense.

You friggin' loon.

138. John Mackey - Radio Cybertwit

Newsgroup: rec.radio.scanner
Date: 1998-06-02 00:00:00 UTC
From: Phil Smalley <Ziggy7445@yahoo.com>
Message-ID: <3574AC0D.5B10@yahoo.com>
Source record: 158735

I have been in this NG for a long time and I have never in all my life seen anyone with such a big mouth use so many words to say so little.

John, who are you trying to impress? What are you trying to prove? Are you going for the Guiness World Record for most enemies gathered in one lifetime?

I don't get it John. You sputter on incessantly about "let's make the newsgroup a friendly place" and "Bill Cheek is calling me names again..." and on and on and on. Then when this NG actually IS a nice place and Bill ISN'T calling you names again, you come out of your hole and start snapping at everyones heels again. Make up your mind, genius. You either want to start trouble or you don't. Pick a stance and stay with it instead of being a wishy washy little insect.

And speaking of newsgroups, this one has something that you may or may not have realized it has - A TOPIC!!! Care to guess at what it is? No, it's not "piss off Bill Cheek". No it's not "call everyone a fool". No, it isn't "post the same driveling horsecrap 250 times a day" either. It's about something which your total personal knowledge of wouldn't fill half of a page - scanners.

I have seen people try it all on you. You have been insulted, banned, kicked, laughed at, teased and ignored. Nothing works. Still you are here.

So now I have decided to give what you seem to want SO BADLY - a fight. Go ahead. Post away. I will make you eat every single word. You will be so completely humiliated, so absolutely overwhelmed with feelings of worthlessness. I will make you feel as hopeless and dejected as you did when you were stood up or dumped by every woman within 3 states. I will make you feel worse than when those kids would come beat you up for your lunch money. (Say, wasn't that...yesterday?) I will make you feel worse than when you got fired from McDonalds for incompetence. I will even make you feel worse than you did when Bill punted you from Fido-net.

Go on, try me, you worthless little worm. I will make you cry for your mommy. You'll be calling the suicide hotline so many times they'll finally say "Oh just go do it and get it over with John". And I will do it all without saying ONE foul word. No bans, no sysop involvement, nothing. Just you and me, tough guy - I will not rest until you shut up.

Do yourself a favor. Go back to posting in alt.fetish.hamster, and save yourself from the verbal beating of a lifetime.

-Phil

dont be so quick to unload the 2050... although i dont own one.. from
what i hear, it is basiclly a base version of the pro90/bc235... which
make excellent analog scanners as well as trunk scanners... and with 300
chnls.. its a good radio... i use my bc235 for both trunk tracking and
fire scanning... works great...

Hmmmm this is probably when they send data to the cars computer,ie a file of the incident,and esp if they don't want to waste all the time talking..so the data just comes into the cars pc,and the guys see it there and know where or what to do next..it could be ax25 data,ie packet at 2400 baud..I never investigated it too much...

> E-mail-- Deforger@aol.com
> Thanks in advance
> Robert

Robert....I will have my Cub page back up soon....What I can tell you is
most likly the same stuff you know.
The Cub of course is cheaper and does not have several of the function
the Scout has.
No memory storage
No viberate

The Cub has more coverage.

The Scout is one hell of a freq counter but if you don't have the money
or don't plan on using the reaction tuning its a waste of money....this
counter was made to be used for that reason. If you plan on buying one
of the expensive scanners to go with it, then definatly get the
Scout.....if not then don't waste your money....the Cub is great for the
lower buget, not so rich scanner nut!

The Cub is very sensitive and can grab freq's from distances you won't
believe....if you live near a ridge where paging towers are and FM radio
transmitters you will be pissed! They are very strong signals and will
give readings when you don't want them to.

For the Price of the Scount you can have *Two* Cubs and a bunch of
eccessories!

Remember------Just My Opinion!
Oh yea.....stay away from Startek and Radio Shacks counters. I have had
them all and the Opto's are the best!

>
> I was aware of the Winradio for some time, but it never interested me as I
> just thought a radio built on the ISA bus, INSIDE a PC was not a basic good
> design.

The design doesn't have much to do with its
fit into an ISA slot. Physical, maybe. But
in terms of electronics, the matter is moot.

I'll tell you what.....INSIDE a PC, especially a modern one,
is a lot quieter of a place than outside one, especially
near a monitor and some other devices I can think of.

> Times are a'changin, and the ISA bus will
> soon be a relic of computer evolution (replaced by the PCI and AGP bus) just
> like so much other PC hardware has evolved over the past 15 or so years.

There is too much legacy equipment out there for
the public (and business) to tolerate a sudden
shift. True, the ISA bus is going....going....
going....going....but it will be a while before
it is gone. Meanwhile, talk to people who ARE
using WiNRADiO's ISA version. It works. And
it works fine.

> I happened upon an ad for the PCR-1000 and immediately one in January
> simply because I figured Icom was a solid company

That much is true.......

> and the radio sounded so intriguing.

That it does......

> I am a computer programmer,

And Icom refuses to support programmers, so?????

> so it sounded like an ideal way to
> merge two hobbies. Initially it all went well and I've enjoyed the radio a

> the PCR-1000 has met my needs well.

Even being slower than a drunk slug?

> and obviously the radio internal settings can be easily
> corrupted by experimenting.

Someone else suggested that....but the problem does
not seem widespread, so that's not one of the Icom's
glaring faults.

> Anyway, one of my biggest frustrations with
> the radio is that Icom has been so tight-lipped about the command protocols.

Seems a LOT of companies haven't learned the IBM-PC/compatible
and Open Architecture Lesson yet,

WiNRADiO did, though. They support programmers.
And....they respond in a timely fashion to e-mail
and other communications. Does Icom?

> Good luck with your choice. Personally, if Winradio is coming out with an
> external box, I'd wait to see that before investing...

They are. But the best buy...the most bang for the
buck will probably be with the ISA version since it
is tried and true, debugged, and stable as a rock.

And it works.......

> I am looking to get cell phones with my 2026. Can anyone help me out?

Maybe. Depends on when that radio was
brought into the USA. If before March, 1994,
then clip L-201.

If after March 1994, it will have empty pads
for L-201....meaning it's gone and you're S.O.L.
An Act of CongressCritters forbade scanners
with cellular or capable of cell mods after
March 1994. So in midstream, they popped in
a new CPU that didn't have cell capability
at all.

So if yours has L-201, cool. If not, well ????

Sounds like you could make use of my New Users FAQ listed below
in my signature. And perhaps my Getting Started web page as well :

http://www.qsl.net/n2mca/STARTING.HTM

> I was wondering which company makes the best

'best' is highly subjective, so you'll be better off to
find out what's out there, what you want in a radio, how
much you're willing to pay and find a model that seems
to fit your needs.

> portable radio scanners. So far I know only two brands, Kenwood
> and Uniden.

Kenwood is not really in the 'scanner' market. They make a wide
range of amateur radio gear though. As for scanners, there are 12
manufacturers making models to vie for your business : Alinco, AOR,
iCOM, Radio Shack, RCA, RELM, Sony, Trident, Uniden, Welz, WiNRADiO
and Yupiteru.

For a more detailed breakdown, see my Manufacturers page :

http://www.qsl.net/n2mca/MANUFACT.HTM

Since you're looking for a handheld, that includes them all
except WiNRADiO. Prices will range from about $100 to $600.

For more help on features and what to look for, see my Picking
A Scanner/Receiver page :

http://www.qsl.net/n2mca/PICKRECV.HTM

> I personally like the Uniden Bearcat 3000XLT

The 3000 is a nice radio and has many fans. Since this is around
the $350 mark, you might also want to check into the new Sony
models, one of which comes with a PC control interface. If you
have trunked radio systems (which you read about in my FAQ) you'd
like to monitor efficiently, you should look into the BC235XLT
and PRO-90.

Best of luck with your decision and feel free to e-mail me
with any questions!

Strong signals,

You must use marine radios for ship to ship, or ship to shore comms only. You may be able to use your radio 15 miles in, but only if you are conversing with a boat / ship / canoe on the water. You cannot use them like CB or ham radio on land.

For more info, contact www.fcc.gov

I have read many comments/reviews that say they are very good scanners
(with lots of great features), but the negative comments indicate the
need to switch to triple conversion.

From my FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

PRO-2050: 1998 vintage 300 channel Motorola trunk system
tracking base made by Uniden. Tight front end. Excellent
performance. Chassis-less, plastic construction. Squelch
and volume knobs too close and Manual key is hard to find.
IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM
modes are factory set and not selectable. 300 channels in
10 banks and a 2 second rescan delay may be programmed on a
per channel basis. Query feature identifies duplicate
memory channels. Our PRO-2050 scans at 78 channels/sec.,
skipping over empty channels. 10 priority channels. Up to
50 frequencies may be locked out from limit search. A
single pair of limits may be programmed for a limit search.
No Direct key or direct search facility. Factory
preprogrammed frequencies for police, fire/emergency,
commercial air, public service, and weather, but not marine.
See May 1998 Monitoring Times for a review which includes
quantitative test results.

A few years ago before digital cellular phones became the norm, I was listening on 935Mzh to analogue mobile phone calls..when I picked up a young foreign "escort" agency girl talking to a client.
Unusually the girl was very naive and gave much detail about herself to the punter, including the fact that she was from Sri Lanka.
Finally she gave the actual address of her apartment, ..which stuck in my mind, because it was so unusual for them to give this information over a mobile phone .
The following day the newspapers and tv news bulletins were full of photos and details of this girl who had been murdered the previous evening.
Of course I contacted the police who visited , and I gave them full details, but unfortunately nobody was ever charged with her murder!

Very Sad..but I knew at the time that this girl was pretty new to the game and was bringing trouble upon herself.

> are there any mods for the pro2026, like memory,

No memory mods, sorry.

> speed, etc.

Speed's possible by replacing the ceramic clock
resonator with a quartz microprocessors crystal
at a frequency a bit higher than the resonator.
But speed kills.....and it can kill the scanner.

> just got one the other day- a used one.

Depend on if it was brought into the USA before
or after March, 1994, you can clip L-201 to
restore cellular. If L-201 isn't present, then
cellular isn't possible.

Lots of other mods are feasible. See my recent
posting under the subject: SCANNER MODIFICATIONS FAQ.

Brenham PD frequency is 155.835. Somerville PD might be 154.830. Washington Co. might be 453.825. You can probably hear activity on 155.370 and 154.950. All the country bumpkin police like to use those channels like a CB radio. You can probably pick up Bryan, College Station from Somerville Lake. You can probably get some other good frequency lists from http://personalwebs.myriad.net/kg5ai/freqs/freqs.html . By the way, I lost a prop way out in the middle of the lake. It is just too shallow. If you find it stuck in a tree stump let me know.

Now available: The Western Pennsylvania Scanner Mailing List

This list is for the discussion of radio scanners in the Western Pennsylvania area. This area includes the PA counties of Allegheny, Armstrong, Beaver, Butler, Fayette, Greene, Indiana, Lawrence, Somerset, Washington & Westmoreland, also coverage and discussion from Mongalia, Brooke, Hancock, Marshall, & Ohio counties in WV and Belmont, Jefferson & Columbiana counties in OH is welcome. Sharing of information on local public safety and any other users of 2 way radios from frequencies to channel plans and more. Need help with getting information or have information to share? Please join the list to make monitoring in the area the best experience it can be! (Note: Discussions on monitoring of cordless & cellular phones is NOT WELCOME!)

For more information and to join the list:

From: John <mcdermon@MCI2000.com>
Message-ID: <usJc1.603$E82.811682@news.internetmci.com>
Source record: 158842

Dave,

I was aware of the Winradio for some time, but it never interested me as I just thought a radio built on the ISA bus, INSIDE a PC was not a basic good design. It meant I would always and forever have to maintain an ISA bus computer just to run the radio. Times are a'changin, and the ISA bus will soon be a relic of computer evolution (replaced by the PCI and AGP bus) just like so much other PC hardware has evolved over the past 15 or so years.

I happened upon an ad for the PCR-1000 and immediately one in January simply because I figured Icom was a solid company and the radio sounded so intriguing. I am a computer programmer, so it sounded like an ideal way to merge two hobbies. Initially it all went well and I've enjoyed the radio a lot. I had sold an AR8000 and since I rarely used it as a portable anyway, the PCR-1000 has met my needs well.

But here lately, I've managed to partially corrupt the innards of it (EEPROM I think) - probably by experimenting with too many downloaded radio software packages. The radio still works okay, but something has thrown the AFC off-center and for unknown reasons my bandscope display is attenuated (no, it is not the ATT button!).

If you're interested in writing your own software to control the radio, the Icom is NOT a good choice (IMHO) as there is NO official documentation of the control codes, and obviously the radio internal settings can be easily corrupted by experimenting. Anyway, one of my biggest frustrations with the radio is that Icom has been so tight-lipped about the command protocols. This has meant that software developers and tinkerers like myself have been left to try to figure things out for ourselves. Turns out that the 'corruption' I have seen has been experienced by at least three other PCR-1000 owners on the pcr-1000@qty.net maillist. The problem has shown up in a machine in Spain, the UK and a couple of us in the USA. So whatever it is, apparently it is a problem that is fairly easy to trip over. So far the only successful repair has been to return the radio to Icom - and wait for a replacement. Since I've done a little hardware mod on mine, I worry that Icom will not warranty it now. Maybe I should not prejudge them about that though... If I can find no solution on my own, I will soon contact Icom and see about returning it for repair. BUT, since the problem was induced by software tinkering, I feel there ought to be a software solution offered by Icom to allow us to fix such things... And even if I get it fixed, the fact that it is succeptible to this simple EEPROM corruption makes it less than ideal for my experimental nature!

Good luck with your choice. Personally, if Winradio is coming out with an external box, I'd wait to see that before investing...

There is a RF DF on the market , you can buy a cheap 1 at a HAMFEST in your area , tune into your local Amature radio Freq, there are a few commercial vendors selling them from $20 to $ 1000 you can also build 1 if your handy building electronic gear and the parts cost approx $100 for the car, all of these units use the Doppler Shift ,I built mine to look for jammers in our local area on the HAM bands and have been very succsessful in finding them, the only problem is it uses 4 antennaes in a 18 inch box on top of my car for looking in the 144 to 148 Mhz band ,,,look around and im sure you can find a cheap 1, good luck ,Ray Larsen

Source record: 158851

ISP District Chicago uses a 20 channel, multi site EDACS trunked system. Freqs are as listed in Police Call or ScannerMaster.

All Low band operations by ISP in Cook County have ended. The only VHF use is the occasional use of 154.935 for car to car and 155.460 for Aircraft ops.

Of course the various mutual aid and intercity freqs are still active. The 453 freqs are for the various state colleges and facilities.

I desoldered and completely removed pin 8 on CN3 (I don't plan on ever
restoring the beep) and it works great! No more plugging a
stereo-to-mono adapter in the headphone jack to quiet the beep when
I'm programming. Thanks for the advice. Now all my scanners are quiet
(except the TrunkTrackers and the Pro-2036, which don't have obnoxious
beeps).

Date: 1998-06-03 00:00:00 UTC
From: Glenn P Caron <gpcaronxgi@worldnet.att.net>
Message-ID: <6la85a$dib@bgtnsc03.worldnet.att.net>
Source record: 158563

These are USSS freq's out of Prov, RI office

Channel Freq
Baker 165.7850 Simplex
Charlie 165.3750 Simplex
Mike 165.2150
Tango 164.6500
Oscar 164.8850
Papa 164.4000
N Zone 154.9350 Rptr RX
S Zone 154.9050 Rptr RX
Prov Rptr RX 164.4000

These freqs may seem pretty quiet as most USSS transmissions are encrypted.

From: OpEd@webtv.net
Message-ID: <6l3unn$88g$1@newsd-104.iap.bryant.webtv.net>
Source record: 158609

New York:
I-84: 453.425; 453.525;
NYSP Troop K: 155.505(b); 154.920(m)
DC Sheriff: 151.340; 155.640; 156.210
NYSP common: 155.370; 154.695
Note: The freq's for I-84 belong to the Thruway
Authority, and you will hear traffic concerning
all thruway jurisdiction from NYC line to New Paltz on I-87, as well as
I-84, I-287. There is no seperate freq for Troop T cars on I-84. As such
it is very busy on the air. It is very useful , though in bad weather,
as you will hear about the yuppie who wrecked his BMW on Stormville
Mountain before you even pass the Danbury weigh station.

Ct:
Ct SP is in the midst of converting to 800mhz
trunking. For the old freq's which are still in use
search 42.200-42.680. Danbury is already on 800mhz. Try also 154.875 for
Ct DMV patrols.
This is also used by city of Newburgh in NY.

Hope this helps

Mounting any antenna outside will improve reception. Even if you run
coax to a whip and place it on the patio. If you can place a discone
or scantenna outside and hide it with some trendy decoration that won't
offend the condo board, this will help, Or if you can afford to purchase
another scanner try the uniden BCT-7
or one of the new RELM scanners. These are quite sensitive. I use a
BCT-7 with the back of set whip and pick up UHF signals from 60 miles
away(yes that's true). One caveat with a sensitive scanner. Beware of
intermod.

245. Re: Need NEW YORK FREQ. #'S

I used to live in Glendale AZ, and I once heard an officer and his girlfriend breaking up OVER THE PHONE PATCH!! The conversation lasted for nearly 2 hours as they sobbed and yelled at each other. It got to the point where you couldn't even make out the words from all the screaming and snuffling going on. I called a friend of mine up at work and he put it on the speakerphone for all to hear. At least 2 dozen people were listening in as the drama unfolded from my scanner. I thought for sure the dispatcher would come on and pull the plug, but the call went on and on.

It was probably after that incident that the officers were told that they were being monitored by countless scanner enthusiasts in the area, not to mention every news agency in Phoenix. No doubt every scanner listener in the valley heard the whole embarrassing thing, and probably called up a friend like I did, to share the moment. Imagine being the dispatcher that day, receiving call after call from the news agencies: "What's going on?","Who is that?", "Is this a common occurance?",etc. I can just imagine the look on the officers face as it dawned on him that probably 5000 or more people heard that whole call....

Yeah, I'd say that's about the WEIRDEST thing I ever heard on the scanner to date... but, now that I am living in California again, I should be able to top that in no time....

-Phil

> freq in ok...

I have a Pro-2041 and I'm having the same problem. The whole
800/900mhz band is in 25khz steps and I need for it to do 12.5khz steps.
The book says how, but I tried what it said and that didn't help. I also
tried re-initializing the scanner, no help either. GRE wouldn't tell me
either when I called, they didn't even know what I was talking about. :(
All of my other scanners do 12.5khz steps up in the 800/900mhz bands, it
dosen't make any sence for a scanner to come out that dosen't.
Any help on this would be greatly appreciated.

Back before listening to cellular phones was illegal, I was listening to a guy talking to his girlfriend, and he was complaining that his cellular phone was causing his scanner to lock on their conversation and he couldn't monitor other conversations. He said hi to everyone who was listening to him. I used to know who the guy was, but have forgotten. He was in Kansas City and used to hang around the BBS groups.

Source record: 158629

I found an undocumented Uniden Sportcat 150 feature (Great scanner by the way). Before you turn it on press and hold the WX and L/O keys. Turn it on and it shows the voltage left in the battery. When you are in this mode pressing the number keys brings up numbers you can adjust. Press the DC/Bank button does things too. If anyone knows what this is please Email me at afowler@juno.com. I tried Uniden customer support. It is always busy.

With the SportCat 150 the battery icon appears after holding the L\O and WX keys and turning the scanner on. If I remember correctly, if the scanner is plugged in it should read 1.72. If you do not have it plugged in it should read 1.66 if it is fully charged. If your scanner reads 1.45 or lower, your battery is running extremly low and needs recharging.

Power on with...

WX and L/O -View voltage left in battery.
2, 9, MAN -Clears all memories.
2, 9, L/O -Illumination Diagnostic.
2, 9, PRI - Puts test freqs in channels 1-21.
2, 9, SCAN - Puts in more test freqs.

I was afraid of that but hoped that I was just missing something - the manual stinks. I can't believe that it doesn't - even the bargain basement scanners do.

>From: John Mackey - KA0SSF <ka0ssf@parg.org>

>Yes, I agree! That is WHY we are trying to get Bill Cheek to SHUT UP with his trouble making!

Wackie Quackie, you're as deluded as they get. You went off somewhere (jail perhaps) and evidently did not have access to a computer. Ergo, you declared a "truce" and made a big show about wanting to stop flaming, electronic stalking and all your other nefarious activities. Now that you've served you sentence, you're back to cause trouble all over again. You attacked Cheek without provocation and you haven't stopped. You posted six flames so far today. In only four days or so, you've run your count up to more than a dozen. At that rate, you're running at about 50 percent of your 300-flames-per-month pace.

>For every topic you came at me with, I can prove you wrong & there are about 5 people who will dis-agree for every one you can find that will agree.

Will five people please step forward and agree with Quackie? Thank you.

>You state "Bill ISN'T calling you names", then how do you explain the statements below.

Wah, you called him names and he called you names back. Quackie, don't be such a crybaby.....

For those of u who have tracking software and would like to keep track of the shuttle and Mir here is the NASA site to get the orbital elements for both spacecraft:

http:// shuttle.nasa.gov/current/orbiter/orbiter/sightings/shuttle.html

There is also a check box to get tracking software but the site must have been down for some reasn when i tried it.

This will definitely help those of u who want to hear either of both of the crafat.

73 and good listening,
Tony

The only scanner I know of that receives that band is the AR-5000 base scanner that I believe goes up to 2500 MhZ. The price on that scanner is sposte to be 1,500-2,000 bucks.

Nope some are spread spectrum and some are Analog. I checked my $59
V-Tech 900 MHz cordless and the freq and range you mention is valid for
mine. I can go about 300 feet radius from the base unit before the
handset starts to noise up.

It is on the middle board. The pin with the dot next to it is #1 just count down 8 pins and go straight across to the other side of the IC and that is pin #9. Just did the mod this weekend and the only tough part is finding a place to mount the jack. I used the top cover behind the earphone jack. Good luck!

I think the weirdest thing I ever heard on the airwaves was in 1993 when a South Bend (IN) officer was being dispatched to a home where an elderly couple lived... the male party demanded an officer be sent to the residence because he wanted a divorce, and his wife retaliated by turning up the heat in the house (this was happening on a 90 degree day)! The man then wanted to know why it wasn't illegal to "cook" your spouse out of the house!!

Believe it or not, after spending hundreds of dollars on the most exotic
ones out there. I have come to the distinct opinion that the 10 dollar
Radio Shack collapsible antenna with a center loaded coil to be the very
best across the entire band (and especially great in the 46 to 50mhz
range. Forget the Diamond's and the Ferret's, this can beat them all,
seriously. This is of course for hand held use only. For the roof, I have
never found anything to outperform a high up mounted Channel Master
"monitenna" and to think it was only 50 buck as opposed to the several
hundred I spent on a couple of the highly touted one's. Good luck.

Its the software not the radio itself. The radio can do just about anything
with the right software except:

1. Monitor the bandscope when in CW or SSB mode and provide audio at the
same time. Audio is muted if the bandscope is on while in these modes.

2. Supposedly cannot provide any information on the CTCSS tones it is seeing
as the logic is the opposite, the audio is only turned on when the CTCSS
tone is received as programmed by the software.

There might be others but those are most noticeable from a user point of
view. ScanCat, Radio Max are two programs that eliminate that restriction.

Steve

286. Aurora, IL PD Freq

Newsgroup: rec.radio.scanner

From: mjlinden@mcs.net
Message-ID: <6l4lp4$8j0$2@Nntp1.mcs.net>
Source record: 158652

I'm trying to find the frequency(s) for the Aurora, Illinois police department. The information I have so far shows the frequencies as...

155.6100 Aurora PD Dispatch
151.3850 Aurora PD TAC
156.1500 Aurora PD car-to-car

However, Aurora is a fairly big town and I've heard nothing on these frequencies. A friend of a friend said that he thought Aurora went to a trunked system. However, all of my sources (Scanner Master, local WEB sites, etc.) show the above VHF frequencies and say nothing about trunking. Anyone in the area have any information on the subject?

Thanks... Mike, mjlinden@mcs.net

He's an imbecilic hermaphrodite. Whaddya expect?

> John, who are you trying to impress? What are you trying to prove? Are
> you going for the Guiness World Record for most enemies gathered in one
> lifetime?

He *thinks* he has friends

> I don't get it John. You sputter on incessantly about "let's make the
> newsgroup a friendly place" and "Bill Cheek is calling me names
> again..." and on and on and on. Then when this NG actually IS a nice
> place and Bill ISN'T calling you names again, you come out of your hole
> and start snapping at everyones heels again.

It's always been that way....ever since I popped
'im in the poopy over on FidoNet and gave 'im his
sailing orders and sent 'im flying through the air
with the greatest of ease like the man on the
flying trapeze......

> Make up your mind, genius.
> You either want to start trouble or you don't. Pick a stance and stay
> with it instead of being a wishy washy little insect.

His stance was picked....like a booger....a long
time ago. He just guilds it in lilies and
veneers it with spew and sputter.......

> And speaking of newsgroups, this one has something that you may or may
> not have realized it has - A TOPIC!!! Care to guess at what it is?

Imbecilic hermaphrodites don't guess too well....

> No,it's not "piss off Bill Cheek".

He would like to.....because he likes it when I
call 'im names and frag 'im. He's into leather
and chains and bondage and stuff like that.

> It's about something which your total personal knowledge of wouldn't
> fill half of a page - scanners.

He doesn't know a scanner from a fanny.......

> I have seen people try it all on you. You have been insulted, banned,
> kicked, laughed at, teased and ignored. Nothing works. Still you are
> here.

He's into pain and other masochistic kinds of
things...... He's especially fond of it when
people beat the tar out of him in public. He
thrives on being abused, and when no one
volunteers it, then he goes looking for it.

Up at State Prison a few years ago, when he
was voted Most Popular Bitch of Cellblock 19,
he was the ONLY inmate who stood with his
gut to the wall in the showers. Everyone else
walked around in the showers, backs to the wall.

Not HIM.

> So now I have decided to give what you seem to want SO BADLY - a fight.
> Go ahead. Post away. I will make you eat every single word.

Careful. You're making him quiver in orgasmic
ecstasy.

> You will be so completely humiliated, so absolutely
> overwhelmed with feelings of worthlessness.

That is exactly what he wants,

> I will make you feel as hopeless and dejected as you did
> when you were stood up or dumped by every woman within 3 states.

Well, that was just for show. He doesn't like
women, period. He feels they are "competition".

> I will even
> make you feel worse than you did when Bill punted you from Fido-net.

Now THAT will be hard to beat, even if I say
so myself. Me and him had to go to the hospital
on three legs to get one of mine removed from his
fat patooty, it was in so deep. THAT wasn't the
sad thing. though. The real pits is that he giggled
and tittered all the way to the hospital.

> Go on, try me, you worthless little worm. I will make you cry for your
> mommy.

Her name is Lizzy, for short. Thunder Lizard is
the full English name.

> Do yourself a favor. Go back to posting in alt.fetish.hamster, and save
> yourself from the verbal beating of a lifetime.

He's licking his chops, Phil. He can't wait for
you to put the hurts to him. His favorite expression
is, "Ooooohhhhh, THAT hurts sooooo gooooood!".

Now you know.....

Pity. He's such a sick reptile.....

IC chips never have a "pin 0". They always
start with 1, and go in a CCW direction, as viewed
from the top, to the max, whatever it is.

My business uses the Nextel system (www.nextel.com/index.shtml) and yes they are digital. Go to the web page for more info on their products. They are for the most part in the 800 mhz range. They just started a 900 mhz range (I believe it is for Japan only). Good luck on scanning the digitaly encrypted transmissions.

Hey, does anybody now a good mail order company? I'm looking at buying
a BC235XLT.
I have seen prices from $230 to $300 want a good price from a good
dealer. Also have seen
where some companies modify the volume through the head set for races,
is this true, is it easily done, is it necessary? thanks.

I have had a similar logging in that area. It turned out to be a
transmitter link for an adult Pay per view service.
I am assuming that you hear a single unbroken carrier with a
conversation in the background.
I doubt it is cordless. I believe all are digital in this range.

The PL tone for channel 1 on their extenders (car-to-station) is 173.8.
Don't know what channel 2 is (car-to-car). Channel 3 (direct
extender-to-extender) uses no tone. Hope this helps.

Most of the racing scanner vendors claim to do it, but I don't think
it is necessary. As a veteran of many NASCAR races, I can tell you
that with good headphones, volume modification is not needed. For
that matter, most scanners will drive at least two headphones with
sufficient volume. Stay away from the cheapest headphones - they have
very little noise reduction.

I like the pcr1000 so far but can't figure out how to scan more than one memory bank at one time. Any suggestions?

Yes, Upton, for you, it is. I chose a
different connotation. Perhaps it sailed
over your head? Were you in full possession
of your head ALL day yesterday?

Sorry you don't like my personal repugnance.
But if you're just jealous, I can give you some.

If it's just a matter of like or don't like,
well, heck, that's a personal problem. Talk to
your shrink about it. A number of solutions are
available to you.

That's the way I look at it, Mike. Geez, this
crap ain't ever going away and Mackey ain't
ever gonna honor any deals, so we may as well
laugh our sweet patooties off AT him and find
some mirth and good mood from it.

What the heck? And hey, it's good therapy, too.
Instead of coming home and beating the wife,
kids, and dog, just find Mackey on a newsgroup
somewhere and whack the hell outa him. You get
the day's frustrations out of your system....

He likes it. It's funny. And the family will
appreciate the elevated consciousness. And the
dog won't whimper and the kids and wife won't
hide in the closest when ya come home.

There's only one bad side effect. Mackey chaps
the hides of lot of shrinks and analysts who claim
he practices without a license, as a therapeutic
object, and takes away business from them.

:-))

I have an AR8000, and I would like to start using my computer to control it. I've collected 8 software programs that purport to do this. Before I clutter up my computer by installing and evaluating 8 different programs, I would like to ask the group for information on your experiences and opinions with any of these; programs/features you've liked and programs/features you've disliked and why. These are the programs I have:

AOR PC Manager
ARC
ScannerWear
RadioMax
ScanCat Gold
ScanStar (this one bombs during install anyway)
Radio Manager
Virtual AR8000

Thanks for your input.

Hi,

>Is there any modifications that i can do to the bearcat BC2500xlt to make
>it recieve all the bands.

I assume when you say "all bands" you mean 800MHz ?

The BC-25000XLT had/has 25-550MHz and 760-1300MHz coverage. It is not
possible to modify it for for full 25-1300Mhz coverage as the CPU won't
allow it or extend coverage beond those above but depending upon when
the BC-25000XLT you have was made it maybe possible to "open" the
800MHz. Later versions of the BC-25000XLT could not be modified for
full 800MHz.

Take a look at the following web page for further details:-

See http://www.designeq.com/BC2500xltMod.html

You will need to be happy taking your radio apart and working with
surface mount components.

Hope this helps.

> Do all wide band hand helds need this?

Need? No. Benefit from it? Yes.

> Could you use a ducky type for non- shortwave stuff?

You could use a paper clip if you wanted to. Just don't expect it to be too efficient. A single length antenna is a compromise usually and the typical duckie is made for portability and not receivability.

The ability to receive a signal is dependent on the signal's power and the antenna's length compared to the signal's wavelength. Since there are a wide range of freqs covered by a scanner (and therefore a large number of wavelengths involved) you can begin to see how a constant length antenna isn't going to cut it.

If a signal is very strong, doesn't matter how efficient the antenna is at conveying the signal to the receiver circuitry (at home I can pick up many signals with no antenna at all). But as the signal gets weaker, you want a "better" antenna. If you are using an inefficeint antenna for the signal being received it will weaken it. Weakening an already weak signal may take it to the point where you won't be able to receive it.

Some antennas are tuned to pick up signals better in various bands. But what they do to increase reception in one place is simply taken from another (so it might receive better in Band X but Band Y is now terrible).

A good compromise is to have an antenna whose length can be adjusted to match the wavelength of the freq being received (at least when not scanning or when listening to a bunch of signals in the same band). So for lower frequencies, you lengthen the antenna and as the frequency goes higher, you shorten it. Most of today's duckies are pretty good for UHF freqs but don't expect to pull in the weak VHF stuff.

Hopefully that gives some indication of the antenna supplied with the 7100. I was rather miffed to see them replace it with a ducky when the MVT-7200 came out. And it's probably the same lackluster one they supply on the MVT-3300 and MVT-9000 as well.

Actually, all you need is a Uniden or Radio Shack Trunk Tracker or trunk tracking software such as TrunkTrac used in conjunction with a computer-controlled radio. I believe the talkgroup IDs are documented in www.trunktracker.com.

Working Group at <rra-wg@theporch.com>

Votetaker: Jeremy Billones <billones@primenet.com>

STRAW POLL Q & A

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV
process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?
Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which
initiated the last major reorganization in 1993) is the point-of-contact
for questions about this opinion poll. Principal members are Paul
W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg
member, Gary Coffman, KE4ZV, also endorses this opinion poll. this
opinion poll will be conducted by an unbiased third party from the
Usenet Volunteer Votetakers (UVV), Jeremy Billones
(billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborious and time-consuming, and perhaps unnecessary), we will conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV). During the poll, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I disagree with this newsgroup's charter or I believe that this newsgroup's existence should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the preceding 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If this opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, this opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)
rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and
rec.radio.swap included in this opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are
principally used by readers of rec.radio.amateur.*, and their fates
would substantially be decided by any significant reorganization of the
rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.*

reorganization, rec.radio.cb is not included in this opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups
(except for rec.radio.broadcasting and rec.radio.info, which are
moderated). In addition, the following individuals were consulted prior
to this announcement (note that consultation does not necessarily
imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list
gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization,
former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV
process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group
_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Vote "YES" for all of the existing rec.radio.amateur.* newsgroups.

Q: I want to go back to one single newsgroup for amateur radio on
Usenet, like we had back in the 1980's. What should I do?

Vote "NO" for all (or all but one) of the newsgroups.

Q: I support some of the newsgroups for amateur radio, but not others.
What should I do?

Vote "YES" for any newsgroups that you wish to remain unchanged, and
vote "NO" for any newsgroup you wish to have reconsidered in a future
RFD/CFV.

Q: I support the existence of a newsgroup, but disagree with its
charter. How should I vote?

Since this opinion poll is for both the existence of given newsgroups
AND their current charters, you should vote "NO" for that newsgroup.
Again, this is a non-binding opinion poll simply to determine if current
newsgroups should be considered for modification or deletion, not a vote

to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups by posting them to rec.radio.amateur.misc (*NOT* by E-mail to the vote-taker).

Q: I have no opinion, what should I do?

You may wish to read the preceding 30 days of public discussion on rec.radio.amateur.misc about this opinion poll to develop your own opinions (go to http://www.dejanews.com/ and search for "STRAW POLL"). If, after reading the public discussion, you still remain undecided, you may abstain from this opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups.

IMPORTANT VOTING PROCEDURE NOTES:

Standard Guidelines for voting apply. One vote per person, one account per voter. Votes must be mailed directly from the voter to the votetaker. Anonymous, forwarded or proxy votes are not valid. Votes mailed by WWW/HTML/CGI forms are considered to be anonymous votes.

Vote counting is automated. Failure to follow these directions may mean that your vote does not get counted. If you do not receive an acknowledgment of your vote within three days contact the votetaker about the problem. It's your responsibility to make sure your vote is registered correctly. Duplicate votes are resolved in favor of the most recent valid vote. Addresses and votes of all voters will be published in the final voting results post.

HOW TO VOTE:

Extract the ballot from the CFV by deleting everything before and after the "BEGINNING OF BALLOT" and "END OF BALLOT" lines. Don't worry about the spacing of the columns or any quote characters (">") that your reply inserts. Please, DO NOT send the entire CFV back to me!

Fill in the ballot as shown below. Please provide your REAL NAME and indicate your desired vote in the appropriate locations inside the ballot.

When finished, MAIL the ballot to: < voting@clark.net >
Just "replying" to this message should work, but check the "To:" line.

Examples of how to properly indicate your vote:

[YES] example.yes.vote
[NO] example.no.vote
[ABSTAIN] example.abstention
[CANCEL] example.cancellation

DO NOT modify, alter or delete any information in this ballot!
If you do, the voting software will probably reject your ballot.

If these instructions are unclear, please consult the Introduction to
Usenet Voting or the Usenet Voting FAQ at http://www.iki.fi/~jpatokal/uvv.

======== BEGINNING OF BALLOT: Delete everything before this line =======
.---
| 1ST STRAW POLL: rec.radio.amateur.* reorg
| Official Usenet Voting Ballot <RRSP-0001> (Do not remove this line!)

Hi,
I usually refrain from actually posting to newsgroups, and although this is my first time in this group, I feel compelled to express how silly everyone sounds. I realize that I will probably end up getting flamed as well, however I would be quite interested in knowing how old some of you are (ex. Mackey and Bill), and if your daddy's know that you are using their computers. I haven't seen such childish behavior since... well, NEVER! I was going through messages in this group for 10 minutes before I remembered that I was supposed to be reading about scanners... not personal arguments. Why don't you two just end it. Stop posting unless you have something to say pertaining to scanners. Stop trying to come back with that perfect response, and stop trying to have the last word! The sad thing is that in the 15 minutes that I've been in this group, not only have I not seen anything about scanners yet, but I have also been so disgusted that I don't think that I'll be returning for a while. Any group that can get ME, of all people, to flame someone else is not a group that I want to be in.

Don't bother flaming me.... I won't be returning...
~Buck

Harris county is in the middle of switching the system over to smartnet.
They are using two control freqs right now. One is for the smartnet
system and one is for the old system. It takes a long time to reprogram
several thousand radios so they are doing it by department. That is, part
of radios are hearing the old control and some new. That is why it looks
like there are two contrl freqs.....there are right now.

Give it a little time and the confusion will take care of it's self.... I
hope!!

I tend to agree, that bozo should have declared an emergency. I would
have.

Pilots like to recount "heard on the air" silliness. The
rec.aviation.* news groups often carry that kind of stuff.

Warning to casual scanner listeners: Aviation radio traffic is about
as regimented and regulated as it gets. It's meant to be no-nonsense,
no-chatter, and all business. Even police radio traffic can sound
disorganized by comparison. As a result, even small flubs can sound
quite hilarious after a long day of flying. If you don't understand
the humor, don't worry.

After all, I don't think many folks would appreciate the sound of
laughter coming from the cockpit of their commercial airliner.

357. Hand Held Scanners

Newsgroup: rec.radio.scanner
Date: 1998-06-04 00:00:00 UTC
From: Randall Wagoner <lewis68@ix.netcom.com>
Message-ID: <3576F045.4EE8B41F@ix.netcom.com>
Source record: 158524

I'm looking to buy a hand held scanner.

I'm looking at the BC235XLT, but I see that RS has a trunking scanner for a

$100 cheeper. What, if any is the difference between the two?

Are there any other scanners I should be looking at?

Thanks

Randall

358. Re: Weirdest Thing Heard - Suicide (long)

Newsgroup: rec.radio.scanner
Date: 1998-06-04 00:00:00 UTC
From: regult@aol.com
Message-ID: <1998060419284500.PAA02706@ladder01.news.aol.com>
Source record: 158525

I would have to say that the weirdest thing that I have ever heard is a suicide.

This happened about 4 years ago, during the winter....

Cleveland Fire dispatched a box alarm to Burke Lakefront Airport for an aircraft alert. It was reported that an aircraft was going to ditch in Lake Erie. I started monitoring aircraft frequencies and came across a pilot talking to air traffic control about wanting to ditch in the water. The pilot did not sound very stable and kept saying things like he did not have a good day today. He was flying in a single engine plane at about 13000'. ATC seemed to think that he was suffering from oxygen deficiency, and they just wanted him to land. Eventually he turned his aircraft to the east, and Cleveland Fire returned all units. A Coast Guard Helo was enroute from Detroit, but when he started flying over the land, they were also returned. ATC got him to switch to a more discreet channel, and at this time, he was out of fuel and decending, he made a joke about in flight refueling. His comms started to break up at this point. During this whole time I was on the phone with one of my friends who is also a scanner buff. I hung up with him, and called my parents. They live in Lordstown, 60 miles east of here. I had given my dad a 20 channel scanner as he is a volunteer fireman there. My mom was home and I told her how to program the scanner and told her to turn the squelch way down. I maintained contact with my friend via two way radio while listening over the phone with my mom. It was learned that the pilot had been flying for over 5 1/2 hours, after taking off from Akron Fulton Airport, and he was still circling, decending, and now wanting vectors to a lake, again, so he could ditch his aircraft. ATC did an excellent job in giving him vectors and getting him to want to land, but the pilot did not listen to them. The pilot eventually got low enough and he told ATC he found a lake, keep in mind that this is winter and the lake was frozen over, the pilot knew it was a lake because he said there were no lights there. As he decended, his last transmission was "Thanks for all your help." and that was it. It was not known by ATC exactly where he went down, so the Civil Air Patrol was dispatched. I listened to them for a couple of hours, while they mobilized, but they did not find the plane till morning. The aircraft was found in the Shenango Reservoir on the Ohio/Pennsylvania border. The pilot was dead.

All in all it was an interesting night, but as stange as it sounds, the story did not end there.

About 5 nights before this happened there was a fatal hit and run near Akron. A man, who was drunk, was walking in the road, at night, when he was struck and thrown into a snow bank. It was later found out he died because of suffocation, and not from injuries sustained in the hit and run. The only clue was a side mirror. Police checked out some shops and found out that someone did indeed get a side mirror replaced. The police in fact later revealed that they were not

going to press charges for murder or whatever, because the man was in the road, and visibility was poor, they really said they just wanted to talk to the driver to get their story. But before they could, the driver of that car took off in his plane from Akron Fulton Airport for one last flight....

This is also the only thing that my mom has really listened to on the scanner, and she is still a bit shaken up over it to this day.

360. Motorola Trunking: How to track?

Newsgroup: rec.radio.scanner
Date: 1998-06-04 00:00:00 UTC
From: Jay O'Brien <w6go@xxxnospam.com>
Message-ID: <35770346.A66F4475@quiknet.com>
Source record: 158527
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a Radio Shack PRO-90 TrunkTracker. I have found many shortcomings with this unit. Is there anything else out there, especially something that will utilize an external computer, that will overcome some or all of the following items?

Note that the Trunking system I am monitoring uses 27 radio transmit frequencies (not including the receive frequencies) and has over 300 active talk groups.

1. When scanning talk groups, if special functions are used such as patching between groups, the talk group ID is offset by +1 to +15. To hear all of these possibilities, each must be entered as if it were a separate talk group. Obviously the user radios ignore this offset. The scanner should be able to ignore (and perhaps display) these offsets if desired.

2. When scanning for active groups, only a total of 100 groups may be locked out, over all banks. I would like to see at least 300 lockout possibilities for each scanned bank.

3. When "Monitoring IDs", I would like a sorted list of active IDs, perhaps with the number of transmissions.

4. I would like to identify exactly which frequency is used for each transmission on a talk group. This will help in determining if there is a problem with an individual transmitter.

5. I would like to identify the talkgroup usage over a period of time by number of transmissions, total transmission time, transmitted frequency, and perhaps relative signal strength. The talkgroups quantified could either be those specifically entered or ANY talkgroup, perhaps with some channels "locked out".

6. I would like to be able to have an ASCII readout for each channel. for instance, I would like "S.O. North" to display with talk group ID 8208 (plus the offsets when used).

7. I would like to be able to prepare the complete memory data for the scanner on my computer and upload it to the scanner, thus avoiding pushing the buttons on the scanner itself.

Any leads? I have DOS and Win95 computers available and two IC-R7000's, if that is any help.

How's come you changed, then?

> and although this is my first time in this group,

Ahhhhh.....a green weenie! Cool. I can just feel
it in my bones how you're fixing to puff up your
chest and breathe some sanctimonious words of salvation
upon us......

> I feel compelled

By whom or what? The devil or a deity?

> to express how silly everyone sounds.

Does this asinine statement include you, pray tell? Or
are you excluded as one of these "do as I say, not as
I do" types of wannabe messiahs? Reason I ask is that
we get a wandering messiah in here about every 2-3 weeks,
and we were just about due for one again. I think this
makes you the 96th "Coming", give or take..... Ferget
the Second Coming....that'n's long behind us here.

But do continue.....please.

> I realize that I will probably end up getting flamed

Why would you expect that to happen? We don't flame
asinine, nescient newbies until they've been "broken in"
a little. You know....greased real good and warmed up.

> however I would be quite interested in knowing how old some of you are
> (ex. Mackey and Bill),

Smacksie is an imbecile who defies mere age. And me, well,
I figure that's kind of like asking my race and religion.
What size belt do you use, 54? What size hat, 2 ?

> and if your daddy's know that you are using their computers.

Sorry, it's MY computer and my Pop's been dead and gone
for going on five years, I guess. R.I.P.

> I haven't seen such childish behavior since... well, NEVER!

Hmmmmm. Well, I see messianic behavior here every 2-3 weeks.

> I was going through messages in this group for 10 minutes
> before I remembered that I was supposed to be reading about
> scanners... not personal arguments.

Hmmmm. You must be a very stupid messiah, then. Most of the
threads in this newsgroup are about scanners. You'd almost
have to be looking for shit to have found this thread. Of course,
most messiahs do come looking for trouble.......

> Why don't you two just end it.

We did. About two or three weeks ago. But Smacksie got
bored and started in on me again, so after a while, I had
to give 'im what he wanted. He'll shut up again after I
hose 'im down real good some more. He's "that way", you know.

> Stop posting unless you have something to say pertaining to scanners.

Sorry, I don't obey messiahs all that well. In fact, Smacksie
is a saint compared to the likes of you wannabe Mohammads and
Buddhas and Jones's and Swaggerts' and such..... I'll take
Smacksie any day. He's m'boy, you know.

> Stop trying to come back with that perfect response, and
> stop trying to have the last word!

Well.....if you think about it, that would not be possible
if YOU didn't take the FIRST word..... Of course, I don't
expect you to be able to do much in the way of clear thinking,
not without hiring someone to do your thinking FOR you, but
you get my drift, right?

> The sad thing is that in the 15 minutes that I've been in
> this group, not only have I not seen anything about scanners yet,

That's odd. Anyone with so much as a sphincter for an
eye socket can see most of the goings-on here are about
scanners. It was about 99% scanners until Smacksie came
back for another hosing.....but so what? It's still 96% scanners....

So the only legit conclusions are that you came here
looking for some shit....and found it; OR you're just
stupid. Or both......

> but I have also been so disgusted that I don't
> think that I'll be returning for a while.

Puh-leeeeze don't let the door hit you in the arse
on the way out.

> Any group that can get ME, of all people, to flame someone
> else is not a group that I want to be in.

It would certainly appear that we drew you outa the
flames of Hades without even trying. I wasn't aware that
we had sounded your call anyway. And what with you being
Messiah #96 or so, about all I got to offer you is an
especially crusty pair of shorts to eat. Do you prefer
Fruits of the Loom or BVD's? Know what I mean?

> Don't bother flaming me.... I won't be returning... ~Buck

Awwww, don't run so fast, Buckminster Fuller! You might trip
over your "buckyballs" and hurt yourself. But definitely
scoot smart-like and tuit suite so's the door doesn't smack
and bruise your tender arse on the way out. There'll be
some other hardcases here who'll want some of that tender
patooty of yours, so nourish and cultivate it, y'hear?

Be along with you now. Shoo fly.

Source record: 158537

When the band is open, which is rare these days, but soon with the rising solar cycle F layer propogation should be coming in on the VHF low and possibly VHF Mid bands, you can hear coms in the 78-79 MHz range, the only country at this time that I know of using this range with any amount of power is Thailand which use the VHF-Mid band. Maybe some other listeners have more info on other users of the VHF mid band, aside from infrequent military users which seem to be scarce these days.

The manual for my PRO-64 (handheld version of 2041) says that if you put
in an off-step frequency it will round it down to the next lower good one.

I wonder if the original problem and your solution are somehow related to
that documented behaviour. :-)

You're absolutely right, Bill Conduit... I guess I just wasn't in a mood to see bickering posts earlier... It kinda pushed me over the edge, ya' know? But now, I've returned (against my better judgement) and this time I entered the group knowing exactly what to expect... and when you take a step back and relax, it's quite entertaining. (In a "Jerry Springer" sorta way)...

I apologize to Bill Cheek... The one thing I gathered from reading all of the previous BS is that you are the good guy in the battle between Cheek and Mackey... Although in my opinion (which I'm sure you don't want to hear but I'm going to give anyway) you're both being immature... My previous post was supposed to be directed more towards Mackey because he is obviously unable to defend himself at any intelligent level and his babbling had gotten on my nerves (as well as everyone elses as I had noticed). I guess I should've known better. What made me think that *I* would be the one who would say those "magic" words that got everyone to stop complaining. Silly me... If people want to argue, they're going to argue.

By the way, Cheek... You were right about the scanner info... after I closed that LONG-ASS thread, I saw all kinds of scanner info, and I actually found some useful information that I had been looking for for quite some time now.... I apologize for snapping at everyone earlier... I'll crawl back into my hole now... :)

> bill conduit

(Thanks bill conduit, for reminding me to lighten up)...

I believe Radio Shack helped develop SAME and got some sort of exclusive right to manufacture for about a year.

This Fall you might see other radios hit the market and I would expect the price to drop.

You might also research QST, an amateur radio magazine, for additional details on SAME. I think they published something lat quarter of 97 or first quarter 98. Maybe somebody else will reply with details.

381. FT: Icom R 7000 and TV 7000

Newsgroup: rec.radio.scanner
Date: 1998-06-04 00:00:00 UTC
From: Greg Renner <grenne19@mail.idt.net>
Message-ID: <35777DE0.3495@mail.idt.net>
Source record: 158548
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

I have a near flawless Icom R7000 uncut receiver with the TV 7000 adapter.

All manuals and boxes included

Works and looks like new

I would like to trade for an Icom PCR 1000 and some kind of desktop shortwave radio eg. Icom R 70, Kenwood R 1000, Yaesu FRG 8800 or the like.

Email me
Greg Renner

383. Wabted: The new Honolulu PD Freq.

Newsgroup: rec.radio.scanner
Date: 1998-06-04 00:00:00 UTC
From: Bill <bport@pixi.com>
Message-ID: <3576e4c0.0@bonaparte.pixi.com>
Source record: 158550

Honolulu has gone to a trunked 800 system. Does anyone know what
frequencies they are now using??? Thanks, Bill

384. Freeway Camera freqs?

Newsgroup: rec.radio.scanner
Date: 1998-06-04 00:00:00 UTC
From: zxzx777@aol.com
Message-ID: <1998060400064500.UAA01630@ladder03.news.aol.com>
Source record: 158564

On some of the Detroit freeways, and possibly in other cities as well, there are cameras mounted to monitor traffic conditions. These cameras have a yagi antenna installed on them. Is this antenna used to receive signals to tell it to move in certain ways, or is it used to transit video back to a central location? Can the video be intercepted? Anybody know what frequencies may be in use? Could a amateur radio type SSTV interface be used to capture these images? Seems like a sorta-neat way to spend some time if interception is possible. TIA.

I have one extra now of the above unit. Last week I had none.
I advertised for one and I grabbed two of the most promising ones
offered. I have no use for two, sometimes I get carried away.
Anyhow Here's the details on this one:
Model#19-1120. Shows some signs of use (not any of abuse). In good
physical and great operating condition.

From the mnual: True FM Modulation;16 Memories; Individual repeater
offset; CTCSS;Touchtone Page; 16 Didgit DTMF Output;Dual Power
Transmit;Programmable power saver;5 DTMF dequences; Multifunctioning
scanning; Programmable frequency steps; Can be powered by Nicad pack
(included); "AA" battery pack Included, but no batts);or for car
operation, they make an optional cigarette lighter plugin adaptor.
Comes with manual, nicad pack & charger; "AA" pack, rubber duckie
antenna; belt clip. I am asking $135 firm and I pay the freight UPS
ground anywhere in the continenbtal USA. Pyment in the form of a money
order or chck only please.

Trades.....If you have something in mind in the hobby of either
hanm or scanning or shortwave, a trade may be possible.

If interested, please write to me.
Ray Miller N2NJK

Comms were heard on the 43 MHz Band , this was a MNR Freq....seems tthe OPP can show up anywhere .

They were doing 10 -28 , 10- 29 on parties...

Maybe a Fishing Sting OP ?...Ill get tuned in...also Comms on 143.160 no PL tone...may not be OPP , however was Police of some sort.

Point of post...SEARCH...then SEARCH more....

Ya really never know what may turn up....!

I was surprsed the O.P.P had Comms on the 43 MHz band, Using an MNR repeater, with ID's via the MNR Phone patch.

No Ctcss tone on the MNR Freq that I could decode...was SIMPLEX.

- Happy Signals -

Boy did I luck out , Radio Shack made a good Outdoor Amtenna about 5 yrs ago , the one with 3 Vertical Elements , and 3 Horz ones.

It was a BEAST to assemble , however it was the best I ever used...

Well I asked a friend who is a Shack National Rep , he said : I come accross em once in a while " he sent one this week....

Up on a 15 Ft mast ...with nice Coax , man WHAT A DIFF....Iloved that Antenna, glad I found it gain...for 29.95 this time..use to be 49,95...was sure worth every penny...See if you can get one , I think it was made by Archer ....Ugly thing , but man is it a HOT one for 25 - 1300 MHz...

I wont sell this one EVER...

Just a thought.. ;)

> if you think about it?

Shooooooey, I didn't think anyone could relate if
I were to tell it that way....like it is. But you're
right on the money on all counts. And those who
don't like it......well, they can eat our shorts, eh?
I've a mind to send our good buddy Upton a real
crusty pair of Fruits of the Loom......

Though there is one thing you can take to the bank....
that those who don't like it CAN'T think about it.
If they COULD think, then they'd conclude that "like"
just isn't all that important in the Great Scheme of
things, past, present, and future.

> the operative idea is : If you think
> now, back to our mission

Just my point....the pricks don't think. They lay in
wait "out there", all hunkered down and ready to
spring....so when they get a half a chance, they leap
without looking.....and land in a steaming pile of doo-doo.

...and then get mad..... and project.... and snivel....

And rules....oh yes, da rulz!!! Rules are a lot like
titles....which are for people who don't know what they're
supposed to be doing. So someone decides FOR them and
hangs a title on 'em. Well, "rules" are for those who'd
never have a chance of being "right" otherwise". Stop
at all stopsigns, and you're a model citizen, right?

Ri--ght.

> bill conduit
> with an attitude
> etc.

Might that be a "bad" attitude, perchance? :-))

With over 900 scanners ever made, that FAQ
obviously has only a fraction. But it also
contains hints and techniques for "discovery"
in those scanners not listed.

Of course you'd have THAT problem. Nothing would
ever be assigned THAT frequency. To solve the matter,
try entering: 912.0625 .... all four decimal
places for the correct assignment. Works fine.
Do a SEARCH in that band....it steps in 12.5 hKz
increments.

I have an AR-2700 scanner with the optional descrambling (internal)
card. I think I got one of the last two that EDCO had.

It's very cool when you run into an audio inversion scrambled
conversation. BTW, I've heard a number of COMMERCIAL stations in
Phoenix using audio inversion scrambling. Most are cab companies. It
seems the gypsy (is that a PC term?) cab companies were using scanners
to swipe fares. Ditto on tow tucks. Plus it works well descrambling
my own Panasonic cordless phone (as I would never listen in on other's
phone calls...) :)

I once heard of a guy who received a cell call in his car. Apparently, his cell phone number had been published in a gay magazine (yes there IS something wrong with that) and a fag had called him on his car phone. The guy in the car had no clue what was going on. He finally clued in and got VERY irate at having to pay for airtime to listen to some fag ask what he was wearing. The call abruptly ended at that point.

A month or so ago, I heard a plane radio in that it had lost ALL instruments due to an intermittent electrical failure. (this was in the middle of the night) The tower asked if he wanted to declare an in flight emergency. He said no, I think I'll be ok..... FREAK. I wish I had the name of that pilot so I could find out if he was flying my plane.

Saving up for a new Kenwood ts-570s, so ...

For sale: MINT condition Yupiteru MVT-9000
Non-smoker, radio has never left the house.
I have many references from other radio sales over the Net.

$429 plus shipping

Here's info on the scanner:

Range: 0.5000 - 2036 MHz (no gaps)
Channels: 1000
Banks: 20
Modes: AM, NAM, FM, WFM, USB, LSB, CW
Priority: 10 channels
Conversion: Triple
Scan: 30 channels/second
Search: 30 steps/second
Power : 4 AAs 100V AC 12V DC
Size: 2.6"(W) x 6.1"(H) x 1.6"(D)
Weight: 410g
Features:
2 VFOs, band scope w/marker, auto-store,
alpha-tagging, S-meter search-skip, attenuator

Comes with: Antenna, belt-clip, hand-strap, manual (no box)

Source record: 158601

The NYSP helicopters utilize programmable
Wolfsburg radios. Most likely communications
between air and ground for routine patrol will be on the tower
frequency of its domicile airport. Communications to ground law
enforcement will usually be on the statewide and emegency channels
(155.370, 154.695) or the freq of the agency requestng its services.
Usually if there is a search operation one channel will be used to
coordinate all agencies. This would be a freq that all agencies in the
area have access to.

Unfortunately, iCOM likes to design them this way. Even their
"normal" radios are like this.

> the manual stinks.

Suppossedly, the newer units are shipping with an actual "manual"
to supplement the on-line windows info. If so, then perhaps one
of these could be purchased from iCOM in the near future.

> I can't believe that it doesn't - even the bargain basement

....a relevant and undeniable FACT of which is the
addition of substantial COST to the "total" package.

In a word, he has to PAY out a lot more money in order
to get the radio to do some basic things.

Which....by the way.....is perfectly fine *if* it's
spelled out that way, right up front. People don't
object to paying X dollars for a radio, and Y dollars
more for the case and knobs.

That's how it is anyway....it just isn't *normal* to
sell a radio without the case and knobs.

Nowadays, people don't object to paying X dollars
for a computer and Y dollars more for the software.
Times were when, however, that distinction was not
so clear. People bought computers thinking that a
push of a button would turn on the bathroom light
or flush the commode..... And those were very
seedy and shady times in the computer scene.

Shady and seedy times for radio never seem to completely
go away, however. And one only wonders why... Ri--ght.

But people who buy the Icom based on your glowing,
gooshey, loving reviews soon learn that the advertised
price really isn't what they end up paying. Again,
that's fine for Icom-groupies who know and understand
the product and the company.

But you can't legitimately suck people in on the glamor
and glow without telling the WHOLE truth.

So if you are going to pit one radio against another, at least be EXACT, ACCURATE, and totally TRUTHFUL in the *big picture*, and take into account all the "fine print" and "after-the-fact" discoveries with which they're going to have to reckon.

TELL the guy what he can expect to pay for the Icom, and how much MORE he will have to pay to make the radio do the basic thing he was given to expect in the first place. If he doesn't mind, after knowing all the facts, then he might well make a wise decision.

But THAT is not for us to determine. Ours is to tell the truth....ALL the truth, not just a part of it.

Though, I am sure you don't agree.......

What are you saying? The scanner can pick up the signals but listening to spoken words is entirely something else. You don't mean to say that a scanner listener can understand a digital conversation do you? I hope not. You'd be terribly wrong if that is so.

Rich,
thanks for providing that very informative site for us new guys. I do
have a question about the legality of being able to hear cellular phone
calls. In short, I just bought a Uniden BC80XLT. When it is searching the
800MHZ band, I hear cell phone conversation. According to your site, is this
scanner illegal or is the monitoring illegal? Or both?

Reposted without permission ---> Kudos to Richard Kendrick <wa7twi@primenet.com> who is the author of the original version of this story. It was first posted on October 30, 1996 in alt.radio.scanner and rec.radio.scanner.

"All Hail King Mackey The Great Liar"

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

There are two major products that came out of Berkeley: LSD & UNIX.

Johhny boy your the liar, the flamer, the trouble maker on here.
Fact: You lied when you said you had evidence that Bill was a child molestor, you have never shown any proof yet you have accused him again.

Fact: The newsgroup was peaceful and on topic for a change.
Fact: You started all the off topic posts and attacks on Bill , this proves you are the trouble maker of the newsgroup.

>for their "AutoProgramming" feature. In a word, those
>scanners require plain ASCII text files in the below format:
[snip]

You left out one resource for this topic: the authors of the programs. :-)

You're talking about the file formats that the load programs want to see. The 64/2041 require a specific data stream that includes the channel, the frequency, and various codes that only GRE's programmers (and maybe their mothers) care about. The load programs just have to get the channel and frequency from the user's file.

LOAD/LOAD64 already take two formats, selected by a command line switch. Bob Miller's WLOAD is automatically flexible about the channel numbers.

Dealing with a file like

>Bess Eaton Donut 457.5375 467.7625 Rhode Island
>Big Boy 30.8400 154.5700 UNKNOWN OH area
> 457.6000 467.8250 UNKNOWN OH area
>Burger King 30.840 154.5700 UNKNOWN OH area
> 31.0000 170.3050 UNKNOWN GA area
> 457.5500 467.7750 Baltimore, MD area
[snip]

is definitely a chore for something like APFTOOLS. But simple alternates that include an extra comma, or maybe a comment between the channel and frequency, are easy enough to make the LOAD program handle directly. Dirt simple to implement if the user is willing to specify the format via a command line switch. Probably not too hard to have the program recognize stuff automatically, within reason. After all, there are only two data items per line: the channel number and the frequency. And one of those has a decimal point, while the other doesn't.

I encountered another frequency management issue a couple of weeks ago. I use my scanner at car races. On the same weekend I was going to the

Indianapolis 500, the CART race in Illinois, and some short track races. I had a CART frequency file by car number, an IRL file by car number, and a short track file. Barely enough time to eat and sleep between races, let alone fire up the laptop.

So I wrote a little utility that would merge the files, adding an offset (I kept IRL as-is, added 200 to CART frequencies, and put Short Track in Bank 10), and also clear all unassigned channels.

If I can get feedback on what file formats people would like to use, I'll be happy to update LOAD to accomodate as much as I can. I'll also clean up my "Multiple Race Series" file merger for general use.

There are cordless phones that have a scramble feature similar to that used by law enforcement, etc. They are more expensive, but the added cost is worth it if you value your privacy while on the phone. Before you give out credit card information or your address on a cordless phone, ask yourself...."Who is listening in on the conversation today?"

Ahhhhhh, yessss! The BEST resources on the
planet, too, I might add! The exception there is
that most don't know data and databases...or seem
to shy away from it, if they do.

> You're talking about the file formats that the load programs want to see.

Ahhhhhhh, and I was testing with WLOAD, too. No wonder it doesn't
need channel numbers. So I take it you're saying that the
scanner itself DOES need a channel number and will not assume
one, if it doesn't come across in the data stream? And that
Miller's WLOAD does that part on its own?

> Dealing with a file like
>
> >Bess Eaton Donut 457.5375 467.7625 Rhode Island

> stuff automatically, within reason. After all, there are only two data
> items per line: the channel number and the frequency. And one of those
> has a decimal point, while the other doesn't.

Well, that's what a user needs with respect to his own
unique requirements for AutoProgramming....automation for
preparing his frequency databases. And all the better if
he can use the database directly without having to manipulate
it to meet the needs of the specific scanner or interface.

That's the nice thing about the CE-232 Scanner/Computer
Interface and APFTools. Say somebody posts a haphazard list
of frequencies on the newsgroup - all the CE-232 user
has to do is copy the entire message into a text file and
run APFTools on it.....and out comes a perfectly prepared
and organized APF file, ready to go into the scanner.

So apparently, there is a sideline benefit to Miller's
WLOAD for the PRO-64 and PRO-2041 in the sense that his
program is smart enough to know when to stop accepting
superfluous data.....like the ID information that falls
in right after the FREQUENCY data. The scanner and interface
don't need it.....but the user sure does. And it's a pain
in the arse if he has to create separate files, one for
each purpose. It's that kind of thing that diminishes
the fun of scanning........

> If I can get feedback on what file formats people would like to use, I'll
> be happy to update LOAD to accomodate as much as I can. I'll also clean
> up my "Multiple Race Series" file merger for general use.

Well, IMHO, anything that allows the user to have a
master data file for his own personal purposes and
still can be downloaded into the scanner, is....in
my books....pretty hot stuff.

Now since there is no such thing as a universal standard
for frequency files in form and format, it's not up to
you to create one.....but anything you can do to permit
a detailed info file to be casually dropped into the
PRO-2041/PRO-64 in the blink of an eye would be pretty slick.

Seems it might not be a terrible problem so long as the
channel number and frequency got the appropriate emphasis
at the beginning of each line. Then LOAD could ignore
everything thereafter, right? And since APFTools already
exists and can feast on random, chaotic text files and
output something mighty close to the needs of the PRO-2041
and PRO-64 as it sits, maybe you could incorporate an
APF-file cruncher into LOAD and let it output the requisite
data for the scanners.

APF files are consistent; they are useful as is; and they
can readily be imported by any database manager and spreadsheet.
So basically, the framework is already there, no?

Or, am I missing something? If not, here is the format
for APF files for you to look over:

========

An APF file must be a text file with data in the format shown below.
The CE-232 AutoProgramer requires the delimiters (commas) to be
present. The field sizes given are maximum values. Blank fields
can be indicated by adjacent delimiters (eg: ,,125.35,,,,). Each
line is limited to a maximum length of 255-chars, including spaces
and commas.

Field Reference Labels and format: A,B,C,D,E,F,G=optional fields

A - User Filter field consists of zero to twelve alphameric
characters. The AutoProgramming function can be specified
to program or not, based on any legal filter. For example,
if "government" is a filter, then the AutoProgrammer can
select or reject all data lines with "government" in the
filter field.

B - Channel Number field consists of zero to three numerals.
Leading spaces and zeroes are acceptable, e.g:

,32,
, 32,
,032,

NOTE: The CE-232 has the option to DISREGARD channel numbers.
This is useful because there are times when the listed
channel numbers might not be desired. When the user selects
this option, channels are AutoProgrammed sequentially.

C - Frequency field; consists of four numerals, decimal, and
four numerals. Leading spaces and zeroes are acceptable, e.g:

,1234.6755,
, 243.0,
,0243.0000,
, 26.915,

D - Mode Field; 0, 2, or 3 chars for wfm, nfm, am NOTE: This
field is case sensitive to the CE-232; must be in lower case.
We consider this a "bug", and is the only case sensitivity of
which we are aware.

E - Delay Set/Unset Field: 0 or 1 char;
blank = delay off; D = delay on

F - LockOut Set/Unset Field: 0 or 1 char;
blank = lockout off; L = lockout on

G - Optional Fields G-Z are not recognized or used by the CE-232,
but may be present at the user's discretion.

Examples:

```
government,001,0162.4000,nfm,d,l,NOAA Weather
police,082,158.9700,nfm,,L,San Diego North Dispatch
,,26.915,,,,
,14,97.3,wfm,,,KSON-FM
,002,243.0, am,D,L,mil-air ELT/emergency
```

All five lines are legit APF data lines. The third line is the
minimum acceptable to constitute a valid APF line.

For clarity, the above 5-line APF file is shown again below,
space delimited to make all the data line up:

```
A B C D E F G
========== ==== ========= ==== = = ========================
FILTER CHAN FREQ MODE D L OPTIONAL
========== ==== ========= ==== = = ========================
government 001 0162.4000 nfm d l NOAA Weather
police 082 158.9700 nfm L San Diego North Dispatch
26.915
14 97.3 wfm KSON-FM
002 243.0 am D L mil-air ELT/emergency
```

```
=====================
```

Pretty straightforward, actually. Seems made in the shade
for LOAD and the PRO-2041/PRO-64 by ignoring the 1st, 4th
and subsequent fields.

```

Analyzer2000 ist an indispensable tool for every radio amateur and other people, working with signals in the audio frequency range.
It's running on Windows95/NT and needs no additional hardware, only a sound card!

download at
http://members.aol.com/btf1

features/benefits:
+superfast spectrum analyzer with full control over span, dynamic range and resolution bandwidth
-> switch your radio to SSB and you will have a professional IF-panorama for free!
+time analysis with oscilloscope and envelope display
-> use Analyzer2000 as a digital scope with trigger, grid, single shot and more!
+superhighspeed waterfall display with several coloring schemes
-> use this sonagram to see time/frequency agile signals with a resolution of less than 50us!
+several tools like level riding markers with delta function, averaging, peakhold...
-> measure fsk-shift, harmonic distortion or intermodulation with only a few mouse clicks!
+fft-based morse decoder
-> decode several CW signals within one band simultaneously with automatic speed and threshold control!
+realtime processing thanks to the multithreading architecture
-> do not lose any sample even on slow machines
+20 seconds post trigger memory
-> analyze the signal several times with different settings
+Snapshot and recording feature
-> save your signal to a wave file (last 20 seconds or all new)
+Analyzing of standard wavefiles
-> analyze signals from former sessions or other stations

Available or coming options:
+Low IF input on 11.025 kHz +/- 5 kHz for real IF analyzing capability
+TCP/IP server for remote controlled operation (via LAN/WAN) with multi client capability
+Baseband analysis with constellation diagram, phase diagram, frequency diagram for signal classification
+Demodulation of FSK/PSK signals with bit analysis

> OK Phil, where are my "poor grammar and demented opinions"?

You are seriously demented, John. You sit here every day blasting people for not posting scanner related issues, for cursing, and for abusing their ISP's when you are more guilty of all of the above then anyone else. A dejanews search on you reveals that you have posted literally thousands of flames to this NG alone in less than 3 years. And then you wonder why and cry and snivel when people give you what you so richly deserve - an ass whupping from here to kingdom come.

Just about every post you put up shows what a hypocritical idiot moron you really are John. If you need me to point them out for you, then you're worse off than I thought. (Believe me, that's bad...)

Even Emilio Goldsteins ridiculous posts have more redeeming value than ANYTHING you have ever said. Take the hint and find a new hobby - like bungee-jumping without the bungee.

> good as the 2006 minus the trunk tracking?

No, and actually you can't do a direct comparison between the two models. The 895xlt is made by Uniden and is basically the 890xlt with 100 more channels, military air band, and CTCSS included (instead of optional). The PRO-2006 was made by GRE of Japan and sold by Radio Shack. The two are totally different internally. Any GRE-made product is a very good product, but you can't always say that about Uniden products. The 895 is not as good as the 2006 in frequency coverage and quality, but the 2006 can't trunk-track.

> What is the 2006 worth. I am thinking of selling mine.

There's a demand for them. Try $300 at least.

There will be a Panasonic cordless coming out within one or two months that operates on 2.8 GHz. Otherwise, any capable scanner can receive cordless phone conversations, digital, SST (spread spectrum), or of course, analog.

Not many scanners today available for purchase can receive 2.8 GHz, and if they were able to be purchased, they would virtually be thousands of dollars.

http://www.arrl.org/arrlletter/98/980605/#scanner

"The FCC plans to further tighten its rules on scanning
receivers to prevent reception on cellular telephone
frequencies."

Briefly, they want much higher filtering of images (not a bad thing)
and "completely inaccessible" RF and control sections (a bad thing)
which "will likely render the equipment inoperable" if modified.

I guess "receiver alignment" is a phrase that will fall out of usage...

The next question is, what about all that certified equipment on
the market? Will it have to be recertified? (FT-50, VX-1R, etc.)

The devil is in the details and there are a lot of details. I've not
decided if, overall, it is a good thing or not but the 33cm ham band
can be written off.

The FCC has a 30 day comment window. Comments?

No need to hire. I think your insecurities have gone too far; and get your crap out of this newsgroup. You are such a rude little bag of water, I cringe even thinking about you. *Your* posts are sounding weaker as time goes on, however time for you has stopped - you're caught in your young and ill-experienced two-year old period and years of your life's world, and acting like it very well. I believe you will have to find yourself some compassion before thinking about others' well-being.

Put more simply, get some help.

Beware I was not defending Mackey in my first reply (I think he is questionable himself), nor anyone else. The level in which you've dealt with your own problems is incredibly low. Quasar stupid. So stupid, in fact, that stupid collapsed on itself.

Bill Cheek is actually intelligent. I realize he may be sometimes rude, but everyone has a right to be at sometime. It is an "intelligent humor" kind of thing - a unique and good thing to have. Now, being rude as you are, is not something that will get you anywhere above the depth at which you are now.

In North Carolina The State Highway Patrol uses 6 or 7 frequency
pairs in this frequency band for Studio-Transmitter voice links
between Dispatch Centers (Which are usually in Towns that are in
the lowlands) and mountain-top Transmitter sites.

For example in my area 72.90 is an STL from E Troop Dispatch
(Salisbury) to the Xmtr site on Buck Mountain in the Uwharrie Nat'l
Forest.

> MHz range,

There's also a good possibility of picking up signals in that band via "sporadic E" propagation and weather-related phenomena. Both seem to peak around this time of year, so it would be a good time to start experimenting on the band. This past Monday June 1st about 5-6 AM, I was repairing a B&W portable tv in my basement (below ground) shop. With just the whip antenna I was picking up WCCO Minneapolis on channel 4, and CKY Winnipeg, MB on channel 5. I couldn't identify the station on channel 3, and channel 2 is out of the question because of a local station. It didn't occur to me to tune around with the scanner, but I'll bet both the 30-54 and 72-76 MHz bands would have produced some interesting catches for the Minnesota, Manitoba and NW Ontario regions. One summer, conditions held in for about 3 days. I was able to trip a Ham Radio repeater over 70 miles away with just my handheld, and I logged many of the low-power UHF-TV translators that are on the air in northern Minnesota.

> the only country at this time that I know of using this
> range with any amount of power is Thailand which use the VHF-Mid
> band. Maybe some other listeners have more info on other users of
> the VHF mid band, aside from infrequent military users which seem
> to be scarce these days.

I've always wanted to find an accurate, reliable list of North and Central American low and mid-band frequencies that wasn't limited to a specific region. This might be a good idea for someone with a scanner website who wants to provide something useful and different - instead of listing frequencies useful only in a small geographical region, and regurgitating the same old, tired links to other sites. I've always made a point of copying any low-band listings I've come across when cruising the Web. I'll bet a pretty good, accurate list could be assembled by accessing the bandplans posted at the FCC and Industry Canada homepages. There used to be some point-to-point stuff on 72-76 MHz used for linking the highway

department's towers here in Ontario, but I haven't checked for some time to see if they're still active. Getting CURRENT activity lists is the problem. A lot of sevices are abandoning their low-band comm channels and mid-band linking channels. I sure miss some of those state police and highway patrol channels!

I have a few favorite 30-50 Mhz channels I keep in my scanner to let me know when the band is open, and once I notice things are happening I usually start searching the public safety frequencies. Those small-town sherriff departments in the 37 MHz segment can be quite amusing. I don't have much in the way of listings for 72-76 MHz, though, and most of that stuff is low-power industrial comms that wouldn't propagate very well.

Best Wishes, Alan - VE3NNM

oh

oh john

oh martha

ooooooo eeeeeeee yazoo....

Mackeral is infirm and infantile and infected
with infectious vermanized stupiditis....very
anal kind of BVD smeller....

OH...now according to the heightened acumen
of the Mackeral...an ASS is Swearing and Cussing
topic. Or an Ass is he.

An ass...nice sight.
An ass...hers glows in mood-light
An ass...what a joy
Her ass...nothing like tinker-toy

An Ass...fine and true
an ass...don't remind me of you
An Ass...sloped to please
an ass...bumps pop up in cold breeze

An Ass...not cuss or swear
An Ass...hers so soft when toilet paper...does tear
An Ass..how does this end up in a MAckeral view
An Ass...he considers it a sin ... do you?

The Mackeral has a main-brain, lost
accusations so stuporific and at what cost
he alludes to a religiousness in what other's say
he don't like it...obey him or rue the day.

bill conduit
etc.

scanning is not spelled scaning. this is
to keep it topic-oriented.

Well, I guess he got you there the Cheek Guy

I guess you will have to hide now seeing as how
his majesty of tragic nuances seems to have found
you out....what will you do now that he's thinking
he's won one over on you?

How will you face your ASS when you look in the
over-head mirror each morning?

decisions, decisions, decisions...with a scanner
in hand listening for the "saving saviours voice"

are yee damned the Check Guy?

curse you mackeral ?

i guess the Cheek Guy will fade away now
that the Mackeral has made his secret pubic
knowing?

it dont' look good for the check guy....

Has the mackeral made his final move? Does he
think he's got the CheeK Guy on the ground
hovelling at his command to "obey?"

stay tuned next week for "when will the
Cheek Guy recover? Will he recover?"

we have news crews on the way and will report
back as soon as the sun don't shine yesterday.

> see bickering posts earlier...

There is a sure cure for that. DON'T READ THEM.
No one is twisting your arm. You are master of
your own computer, are you not?

> It kinda pushed me over the edge, ya' know?

Lack of self-discipline and control?

> But now, I've returned (against my better judgement) and this time I entered
> the group knowing exactly what to expect... and when you take a step back
> and relax, it's quite entertaining. (In a "Jerry Springer" sorta way)...

Or.....the parts that aren't entertaining can be ignored.
Liken unto those hundreds of folks who may not have been
entertained by you....sure didn't unload on you.

> I apologize to Bill Cheek...

THAT isn't necessary. The score was evened up....

> The one thing I gathered from reading all of the previous BS is
> that you are the good guy in the battle between Cheek and Mackey...

Mackey and a few others have no love lost for Bill Conduit. In
fact, they may loathe him more than me.....because they don't
understand him at all. He tells them lots of things that go
over their heads. They understand me. I tell 'em to eat my

shorts. No prose and rhyme from me. But Conduit loves all
over 'em....and they can't stand that.

> Although in my opinion (which I'm sure you don't want to hear but
> I'm going to give anyway) you're both being immature...

Let me assure you that I can render judgments every bit
as harsh as you.....plus one.....even to infinity plus one,
if need be.

The easy solution? Judge not, lest ye be judged. Every wannabe
messiah knows that one.

> My previous post was supposed to be directed more towards Mackey

You didn't say that. Nor even hint at it.

> because he is obviously unable to defend himself at any intelligent
> level

Smacksie has no intelligence. He ranks on a par
with a turd floating in the Punch bowl of Life....
a pustule on the face of humanity.....a wart on the
tip of your favorite booger-picker....a canquer
sore on your soup coolers. Smacksie resembles a
case of the Herpes....he just keeps coming back...
and coming back.... You get used to him after
a while.

> and his babbling had gotten on my nerves

Short fuse?

> (as well as everyone elses as I had noticed).

First thing you have got to learn here is that you don't
speak for anyone else but yourself. Regardless of what
you see or think you see. If a guy pops the ace of spades
out of a fresh deck of cards, and it squirts apple cider
in your eye, you just act like it's normal.

> I guess I should've known better.

Indeed....

> What made me think that *I* would be the one who would say
> those "magic" words that got everyone to stop complaining.

Like I said....we get a messiah in here every couple of
weeks or so. You were a little overdue, actually.

> Silly me... If people want to argue, they're going to argue.

Speaking for myself, yes.....if I want to, I will.

> By the way, Cheek... You were right

Wuz there ever any doubt?

>.............about the scanner info... after I closed
> that LONG-ASS thread, I saw all kinds of scanner info, and I actually found
> some useful information that I had been looking for for quite some time
> now.... I apologize for snapping at everyone earlier...

That LONG ASS thread is actually rather short compared
to some that went well over a hundred posts.....

>I'll crawl back into my hole now... :)

Which one?

> (Thanks bill conduit, for reminding me to lighten up)...

That's the "etc. guy". He's kind of like the spiritual
leader of this newsgroup. That's why we're leery of
messiahs. He holds his own and doesn't pretend to have
a lot of answers. He meditates and spreads ooommmmmmm's
and other mantras over the Group. And there's just no
room for more than one messiah at a time around here.

Reminds me of a couple of preachers I knew back in my
Navy days. We stopped off for a night of R&R in Chu Lai
in about '66, I think it was....and both Deacon Dan and
Bible Bob went to town with us.

Right at 7 days later, they were both standing in the
clappe line down in Sick Bay right along with the rest
of the crowd. Legend had it they caught it off a
toilet seat. At least, each claimed that's how HE caught
it, and at the same time, they accused each other of
lechery and debauchery.

Years later, traipsing along come the good Reverends
James Jones, Swaggert, and Bakker.

Now do you understand? A feller does real well around
here to just take care of his own mess and not fingerpaint
in someone else's..... You stick to that, and you'll always
be able to pick your nose and never, ever have any doubt
about what is and ain't under your fingernails.

Capiche?

It is odd.....because if you ENTER 912.072, it rounds
down to ....guess what..... 912.0625. Doesn't appear
to be any rounding up in these scanners.

Naw, you are as filthy liar, as everyone knows. All was quiet when you were unable to post here while off doing who knows what (I still suspect that you were in jail). Then you broke the supposed "truce" that you now claim to have engineered and have been posting one flame after another. Let's see, this is what day 4 or 5 of your return and you've posted more than 30 flames. I'll guess that today alone you have posted more than a dozen.

You've already resumed your vendetta against Cheek; you've been flaming with abandon; and you are busily engaged in electronic stalking. Soon, the forgeries, the impersonations, and all of your other nefarious activities will recommence. All the while you will be claiming hypocritically that you are making the newsgroup a better place.

30 flames and not one on topic post yet... PARG (who you claim to represent) must be really proud of your accomplishments.

Hey Mackey ... You complain about on topic posting and constantly complain about Bill Cheek but as I read the posts Bill is posting on topic and actually helpinng people. I have gotten good information from several of his posts. I have not seen one of your posts be on topic about scanners lately. They are all bitchin' about Bill Cheek and Bill Condiut.

I speak only for myself, but I suspect most people will agree with me when I say ... If you post stay on topic and quit bitchin' at everyone. I told myself I was not going to take sides in this but I'm tired of this. When was the last time you posted something that actually helped somebody. If you can't be nice to people (and I mean everyone) then SHUT THE HELL UP !!!

Enough said ... Good Night ...

Mike

To the rest of the group ... sorry for losing my temper but this getting old ... thanks for your patience ...
--
Happy Scanning ... Don't let the government take our scanners !!!

>sense.

It makes perfect sense to anyone over the age of 30. Barry Goldwater (K7UGA) and several diehard amateur radio operators ran phone patches from troops in the Viet Nam war connecting them to family and loved ones at home.

This was done out of Barry's hamshack in his Metro-Phoenix home. Several Phoenix hams, including many people in my ham radio club spent thousands of hours in this endevor. A little known fact: Sen. Barry Goldwater also took a complete slow scan TV setup (a newfangled invention then) to Viet Nam, so troops could also send and receive pictures!

Remember, this was a time when their were no communications satellites, no public internet, and very few land lines on the Asian landmass. Our own military was stuck using HF or MOONBOUNCE to relay over-the horizon voice and data at the time.

Barry Goldwater's contributions to this country are numerous, he was a pioneer in aviation, radio, photography, and government.

Another little known fact: Both the Pentagon and the Senate Office Building have hamshacks.

73,

Mark Fellhauer, KC7BXS
V.P. and packet coordinator, ThunderBird Amateur Radio Club (formerly Honeywell ARC)

Well... IT IS a glaring fault if you encounter it! :)

And to tell the truth, I've done relatively little experimenting with the radio software. I suspect there are a number of people who have encountered this problem and just don't realize it yet. The symptoms don't disable the radio - just diminish its bandscope display sensitivitiy, and cause the AFC to malfunction. I know of 4 radios on the pcr-1000@qth.net mail list that have encountered identical problems.

>
>> Anyway, one of my biggest frustrations with
>> the radio is that Icom has been so tight-lipped about the command protocols.

In total agreement with ya on this one!

Whats the scoop on the rumors of a new Winradio 1000e and/or 1500e (e for external?) models? Are they available? Or will they soon be? I'd jump ship from my Icom in a heartbeat if so.

Anyone want a deal on a slightly used and slightly confused PCR-1000? :)

You really don't have many choices when it comes to self contained trunking scanners. The only choices that I know of are the Uniden BC-235XLT (handheld, 300 channels), the Uniden BC-895XLT (base, 300 channels), the Radio Shack Pro-90 (handheld, same as BC-235XLT), the RS Pro-91 (handheld, 150 channels), and the RS Pro-2050(?) (base/mobile). I have been using a BC-235XLT for about 6 months now and don't really have any complaints about it. It really just depends on whether you need a handheld or a base model, and which one is on sale right now.

Distracting other drivers? When I drive, I don't care if the person in front/side of me is naked or jamming to a song, I just care if they are swerving in my lane and what not. Your car should be like your mobile house..do whatever you want as long as you don't endanger anyone else, like drinking beer..i hate that. My girlfriend was killed by a drunk four years ago.

Anyone have any info on the new RS trunktracker? I saw it advertised for about $160 in a flyer that showed up in the mail yesterday. How does it compare to the others in the field??

> frequencies they are now using??? Thanks, Bill

Bill;

Here are the frequencies from the FCC database. Unless you are running the EDACS trunk program on your computer you will not hear much because it is a Ericsson system.

From the looks of the licenses it's probably a multiple site system so you should be hearing several data channels at one time.

Let us know what you hear.

The frequencies are (in MHz)

Look for a RESET or RESTART button somewhere behind
a hole on the back panel. A keyboard reset button is
NOT what we're looking for here. We need a system
RESTART...serves the same purpose as the one on your
PC....Turn the scanner on and press that button and
hold it for a couple of seconds.

Hopefully that will do it. If not, then the radio
is a candidate for repair by the Radio Shack Service center.

I have just started using the Trunker program which will do just about all of the things that you want to do. It involves building a simple interface for under $15 and tapping into a scanner's discriminator pin. Not hard to do. I haven't been able to use the program for tracking because I do not have a computer controllable scanner but the information that Trunker will display if great. I'm pretty sure that the IC-R7000 is supported for tracking control. Check it out at http://web2.airmail.net/lblant1/dfw/digital.htm

Looking for a Pro-2045 for the pure purpose of using it to monitor trunked control channels. I know a handful of you out there must be hoarding these, I haven't seen any near me. I would also be interested in other base scanners that already have a discriminator tap or would be moded easily for one. I am not looking to pay any more that $150 for such a unit. Thanks in advance . . .

553. pro-2021 programming question- channel spacing

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: ameijers <ameijers@mail.tds.net>
Message-ID: <3579CC69.6DD5@mail.tds.net>
Source record: 158210

Apologies in advance if this is in a FAQ somewhere- if so, please point me to it.

RS pro-2021, from a garage sale, so no manual. (and yes, I downloaded the 'manual' from RatShacks web page, and it doesn't mention it.)

Is it possible, and if so, how, to make this unit cover the frequncies that end in 5 rather than 0? (ie, 171.5125- when I punch it in, it rounds to 171.510). I heard from my radio guy at work that the FCC changed the chanel spacing awhile back.

I just wanna program the freqs from my at-work repeater (federal) into this thing, so I can get a heads-up with the morning coffee. (and if it is too crazy, know not to go in... :^))

Replies via e-mail also, plz- my ISP only posts most of the traffic.

aem sends....

Don't try and back pedal Johnny boy , your intent to accuse was there otherwise you would never have posted it .
You wanted to start a rumor and were hoping other people would pick up on it and condemn Bill as a child molestor.
But the people on the newsgroup were not buying it as you and your buddy OBFD have never been able to show any proof that would back up your statement, even after the grandstand posting that you were waiting for the San Diego courts to send the proof and once the two of you had it you would post it for all to see .
So what happend to this proof of a warrant out for Bill, did it get lost in the mail or was it just something you and OBFD made up and conspired together in order to discredit Bill.

Johnny boy the only one you are discrediting is yourself , you can stop all this nonsense and let the newsgroup go back on topic, all you have to do is stop your feud with Bill.
And don't spout the crap about Bill restarting it because he didn't you did.

558. Scanner in the News

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: Don <kingfish@sprintmail.com>
Message-ID: <6lcnob$bi5$1@newsfep4.sprintmail.com>
Source record: 158215

From the June 6, 1998 Albany, NY "Times Union":

" Conspiracy overheard on scanner

Police arrest 3 suspects after good Samaritan hears plot to
burglarize elderly women

While listening to the routine chatter on her home police scanner one
morning this week, a Stillwater woman heard an unusual conversation - two
males plottting to beat and rob an elderly Malta woman.
The woman immediately reported to State Police. After swift detective
work, three suspects were in custody and charged with conspiracy. The
elderly woman was unharmed."

" ..... As the scanner crackled with chatter about emergency vehicles
responding to the storm cleanup in the Stillwater- Mechanicville region, a
private phone conversation crept in."
^^
(emphasis added)

" A male was telling his friend 'about an elderly woman who lived alone in
Malta and was known to keep large amounts of money in her purse in the
kitchen', Investigator Frank Cameron said"

"... One of the men was on a cordless phone, allowing the scanner to
intercept the conversation, he said."

The article goes on to detail the arrest of three men who were charged
with a felony count of fourth degree conspiracy.

Could this case produce a precedent concerning listening to phone
converations if there is a good reason, i.e. stopping a violent crime?

You are correct- I should correct *myself* in saying that most scanners capable of receiving the transmissions are also able to decrypt/"de-digitalize" (if you will) using an external unit. I apologize for my possibly misleading info.

Thanks again Rich,
After browsing more of your site last night, I went and returned my
BX80XLT for a RS PRO91 on sale for $179. I seem to have gotten bitten by the
bug! Now I have to try and figure out some of these features!

Unfortunately, the QSL server seems to have gone down early this morning and has yet to come back up. I got in early this morning around 8 but when I went back around 11, I could not get in myself to do some page updates.

Keep trying!

Hello,
I have the Optoelectronics Explorer for sale. This is in excellent condition, with boxes and all receipts. Has been modified to include the cell band.

Paid $900 for unit not including the case I also purchased for it.

Really can't let everything go for no less than $800. Used very little.

Thanks..

Yes it is thebest antenna I have ever used ! :)

The Cat # for Shack is.... 20-014

See if you local shack can hunt one down , they are still around !!!

Not in vast amounts , but I got one just the other day , and again...cant
be happier with it!

This is my 3rd one too....the 1st one died a violent death due to high winds ,
thats about the only draw back on that Antenna.

The 2nd one , I sold...

This one is NEW, and welll never leave my collections of ' toys ' :)

I did wx proff it..and will replace the spacers Next Spring , in the North of
Ontario , the temps can get VERY cold...and the summers...very hot...not a
very good combo for this antenna.

Again , they are avail!!....just gotta look around , needles to say I was
surprised that my friend a shack national rep found one...!! :)

Good coax , good PL-259's on it...MAN what an antenna...suck in those ' Skip '
Freqs VERY WELL....

I missed this antenna....and again , glad I found one...do I want to sell
it...heheh , no...took too long to find one *new* again.

And the price seemed to have changed , I paid 29.95...did we not in Canada
pay more yrs ago for that ant ?

Ok , enuff said...hope many of you looking for an Outdoor Antenna can find
one of these! You wont regret the 29.95!

Add this antenna into a TV AMP...(50 - 950 MHz) at 30 db , and MAN do you
have a EAR out there!

Happy Signals!

578. FreeTracker version 2.2 beta 1 released

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: read.the@reply.to
Message-ID: <50CC374C6D24D1B9.CA7DAD91BA04BB4F.7DF3EB998B8F0330@library-proxy.airnews.net>
Source record: 158268
Cross-posted to: rec.radio.scanner,alt.radio.scanner

http://www.AutoWinNet.com/freetrack.html

FreeTracker is a powerful Windows95/NT program for controlling your
Bearcat 895 base scanner. And as the name implies, it's FREE!
To operate it, you need a cable that connects your scanner to a Com
port. You can get this cable from a variety of sources, including
making it yourself. See the program's documentation for details.

What's new in 2.2 beta 1:

The beta is essentially a bugfix for a couple of issues...
a. Fixed problems when creating new databases
b. Fixed "Field FREQ not found" error that locked up program
c. CTCSS was completely removed
d. Added Activity Scope
e. Letterpad now stays down instead of retracting after use

The main features are:

* Supports up to 25,000 "Virtual Channels" which are like the radio's
normal channels, but add Callsign, Description, Color (for activity
log), Alarm, location, hit count, and more. VChannels can be scanned
for activity, or stored into your BC895

* Descriptions - You can store Descriptions, Callsigns, and Locations
for frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup
appears, a description is shown, along with Callsign, City/State, etc.

* Alarms - You can assign a Wav file, graphic, .RTF file, speaker
beep,or run a script while that freq/group is active. For example,
have all local police codes shown during police calls. I just added
some Cool bitmaps that appear with local police and fire stations

* Colorful charts and graphs show you what frequencies/talkgroups are
most active

* Powerful script language lets you create your own custom scripts,
and run when a certain event happens on your scanner.

* PerCon database lookups from their web page (stored as html) can be
imported. Also imports from Grove, Probe, and PerCon Dbf files!Drag
and Drop channel editing throw any database entry to a channel, or
vice versa. If that frequency is already assigned, it zooms to the
channel # to avoid a duplication

* Activity Report is color coded - you can assign any color to any
specific freq/talkgroup

* Search Ranges - you can store up to 2,000 search ranges, then double-click them to activate an immediate search of that frequency range

* All BC895 keys are supported, allowing a virtual radio on your desktop

* FreeTracker can be minimized as a TrayIcon, with a feature-rich right-click menu for easy access to popular functions

* Database-editing in a simple grid. Click the record you want, and change any value

* Communicate with your radio interactively - type any command in, and see the response.

* Power users can utilize the quick-command box. Simply key in a command word to change frequencies, channels, scan, hold, search, manual, etc.

Example Syntax:
f15189 tunes radio into frequency 151.890
c56 takes scanner to channel 56
Up arrow emulates SCAN key
Down arrow = Manual
Right arrow = Search
Left arrow = Hold
... plus about 50 more powerful commands

* Export all scanner channels/freqs to a text file or Dbase, then import back into the scanner at a later date.

* Complete logging to a file, or printing just about anything.

* Export your VChannel/talkgroup database to a HTML file for posting on your favorite web page.

* Multiple copies can be run for multiple BC895 scanners

579. Electrical interference from vehicle?

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: MacUser@Penn.com
Message-ID: <MacUser-ya023580000606981349260001@news2.penn.com>
Source record: 158269
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi!

Is it possible to exclude automotive electrical noise that interferes with a mobile scanner? (One way would be to turn off the car. I'm looking for other options!)

I have a bc3000XLT that I use primarily in my car. Itï¿½s a great little scanner, and works well, but reception on some bands is somewhat limited inside the vehicle using the stock rubber duck antenna.

Iï¿½ve tried connecting the scanner to an external antenna on the car. In fact, Iï¿½ve tried patching it off the vehicleï¿½s AM-FM antenna, connecting it to an old CB radio antenna, and finally to a radio shack broad-band scanner antenna. In all cases, reception drastically improves, especially in the lower bands.

However, in all cases, I also run into a problem. As soon as I start the car, the scanner picks up interference on a specific lo-band frequency, 46.14 mhz. Stop the engine, the scanner works fine. Start the engine, and it locks onto that channel. With the engine running I can bypass the problem by locking-out that one channel. However, as luck would have it, 46.14 is the local fire/emergency dispatch frequency, the one channel I *donï¿½t* want to exclude!

Interestingly, I donï¿½t run into the problem with just the rubber duck.

Is there a way I could reduce or exclude the electrical noise from the car? Shutting off the engine isnï¿½t a very practical approach! ;-)

Alternately, would a better rubber duck antenna (like an Austin Condor, perhaps) improved reception in the vehicle without duplicating the auto interference problem?

- Dave

>Any ideas ?

It too is a cheapie......

Most scanners that do not display the fourth decimal place will round
off the last digit . On the 900mhz band the scanner is not very
selective to begin with. You many not notice a difference. Good
chance the scanner is off frequency or offset to fall on the standard
channel steps in the first place when in fact your display shows the
frequency 12.5 KHz off.

I would not lose any sleep over it.

Only other suggestion would be to buy a newer scanner.

That is a question that MANY of us have asked Bill Cheek.

Hang in there, the situation will improve.

They have been on a killfile of mine for over a year now. The filters were set to expire, but it was too tiring wading through 50 annoying useless posts to get the one good one. There are plenty others out there that contribute, so killfiling these two is no great loss.

Plus, you can always check his webpage or email him if you really really need to know.

their names are also in a subject header killfile, and this post didn't have any of the key words (hint hint hint) so I read it.

On with the SCANNING TOPICS!

Alright you guys flushed me out of my hole...I've got about 4 of these puppies located (one's mine though). They're catalog # 20-014 Archer all band monitor antenna. Willing to deal, trade, whatever, I'm not too hard to get along with. Anyhow, let me know if you're interested, I think these are the antennas you all were talking about...

BTW: I've got the $59.00 discone, I bought it because they said it was the best...should I take this back? I've heard several bad things about it. I'm going to get the 20-014 regardless...

James:

It's triple conversion, it scans slow, inter mod is not a problem, nor is overload.

It's typical Icom in many respects. It's made well, somewhat complicated to program. Scan modes are a little different from your normal scanner. It has very wide band coverage. There are three antenna connections. Early generation models were unblocked in the cellular band. Audio is good, with external speaker. Selling prices vary from around $375.00 to $450.00 depending on condition, and cell band.

The reason that you will never see any on-topic posts from Quackie is that he what he knows about scanners can fit inside a thimble that already has been stuffed with paper. One time a fellow asked his opinion about a particular scanner and all the Quackie could reply was: It's a good scanner." He's really deep for a little man.

The fact is that all Quack Mack is interested in is causing trouble. Note that he's posted about 50 off topics messages in the past week alone, most of them to further his personal vendetta against Cheek. One memorable month, he posted more than 300 off-topic messages here. He won't stop--he loves the attention because his life is so miserable that he's completely ignored at home by his girlfriend and the two kids that he is supposedly looking after...

You know, I feel terrible when I see responses like this from Quackie. It is quite apparent that he's a pathological liar and a plain old unimaginative, uneducated dope. There's probably a law against my beating on this miscreant but I just can't help it: It's so easy to poke holes in his shabby facade.

50 posts so far this week Mack the Quack and still not one on topic. When do you think you might stop flaming, stalking, lying, impersonating, forging, censoring, and all of your other nefarious activitities Quackie? Let me know, you beginning to be an utter bore, which for me is the worst sin possible. Once you were amusing, then enraging, and now--well now, you're pathetic.

602. beginner scanner & low freq mods?

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: rjb2@po.CWRU.Edu
Message-ID: <6lcek9$e0j$1@pale-rider.INS.CWRU.Edu>
Source record: 158292

Hello,
I am interested in buying an inexpensive scanner that can be modified
to monitor frequencies in the kHZ range (1kHz-200kHz), as well as the
standard MHz frequencies.
I am wanting to modify it so that I can "hear" ultrasound (bugs, water,
gas leaks, etc.) Anyone ever hear of this before? I have a couple of
ultrasound transducers, and I can make a preamp if necessary.
Can a scanner do this? Can it "scan" for those frequencies?
I assume (a dangerous thing to do) that a scanner works like a radio,
in that is uses an inverse carrier frequency to cancel out the carrier
leaving the "info".

Please send all advice or offers of scanners to me by e-mail (and
post for others).

Thanks for the help,

Randy

Dave,

How are you powering the scanner while in the car? Direct 12VDC connection or batteries only?

If you're using the car's battery, you may want to find a good place to ground the radio. That may be your problem.

Good luck.

Charles

>scanner itself DOES need a channel number and will not assume
>one, if it doesn't come across in the data stream? And that
>Miller's WLOAD does that part on its own?

Right - the scanner needs the channel and frequency. You can see exactly what it wants by looking at Cathy's "print" file or my FRDUMP diagnostic file. If you use the "frequency only" variation of LOAD, the program generates the channel numbers, beginning at 1. Bob's WLOAD goes one better: you can use channel numbers, and if you stop using them it just keeps counting up from the last one.

>program is smart enough to know when to stop accepting
>superfluous data.....like the ID information that falls

Easy enough for the program to ignore information - just use a compiler that's going through its teen-age years. :-)

>APF files are consistent; they are useful as is; and they
>can readily be imported by any database manager and spreadsheet.
>So basically, the framework is already there, no?

Yep. It's a straightforward comma-delimited file. Just need to take the second and third columns. If the channel is blank, then we use Bob's trick of incrementing from the last channel given. If the frequency is blank, that can be taken as zero and the channel cleared.

I should be able to make LOAD automatically recognize APF format and the two that it already does.

Hmmm. Will this count as a "mod" for the program? ;-)

If your radio is powered from the accessory circuit, there is probably no current to the radio when the ignition is turned off. You may need to run wires from the battery, directly to the radio to assure continuos current. Just a guess

WRONG!

FACT: I asked that it anyone had proof that Cheek was a child molester to make it public, otherwise we should drop the issue as only heresay rumor with no facts behind it. I NEVER SAID I HAD EVIDENCE THAT CHEEK WAS A MOLESTER. If you still say I did, then please provide that message here with with date & subject to verify thru dejanews.

> Fact: The newsgroup was peaceful and on topic for a change.
> Fact: You started all the off topic posts and attacks on Bill , this
> proves you are the trouble maker of the newsgroup.

WRONG!

Fact: Cheek started flaming again because someone posted a message with an opinion contary to his. This started a long thread of trouble. I said nothing for a week, then warned Cheek & he continued. Then I started in on Cheek as he must be held accountable for his actions in order to preserve the integrity of this NG & keep it a nice place.

So far, youhave proven yourself to NOT be factual & to only be a liar & manipulator.

Ok, I've had it. While Mackey is useless, Bill Cheeks can be just as obnoxious when he is not on the subject of scanning. I hate to lose useful info from Cheeks, but both are are going into my kill list. I thought things were getting better for a while, but when I checked the group this evening, a good portion of the messages are dealing with the Cheek/Mackey feud. From what I've seen I expect this from Mackey, but Bill, you seem to be an intelligent person, why do you fan the flames?

Cheek claims to have 30 years experience in the field of servicing
scanners. Up until only a few years ago, the "General Radiotelephone
Operators License" was legally REQUIRED by the FCC.

According to the FCC database, Bill Cheek has NEVER held the
required license for servicing radio equipment.

> Whats the matter John? Did you read one of Bills books (you can read?!)

It's OBVIOUS that you are a newbie to this NG. Bill has made statements
in the past suggesting the use of metallic tuning tools for RF
oscillator
adjustments (a BIG no-no) and denying that there are effects of UV on
most coax (again, wrong).

644. Motorola Trunking: Using Type I IDs on Type II system

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: Jay O'Brien <w6go@xxxnospam.com>
Message-ID: <3579090D.D7789C02@quiknet.com>
Source record: 158334
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Thanks to all who have provided lots of guidance on my quest for information. Following up on one suggestion, in my Trunktracker I am now using Type I talkgroup IDs with size code S-1 to track Type II groups which have occasional special functions which offset the ID code by 1-15. This scheme is supposed to ignore the "extra function" byte.

I note that each Type II ID code has a corresponding Type I ID, and using Side Code S1 I am able to program 50 IDs for each bank using Type I codes.

Is there any disadvantage to using Type I IDs in this manner rather than the Type II IDs? It seems to me that the advantage is that if "special functions" are enabled, thus shifting the Type II ID code, that I don't have to be concerned about entering all the possible shifted codes.

Jay O'Brien
w6go
@
quiknet.com

PS.. I am convinced that the only person who understood the manual provided with the PRO-90 the first time it was read is the person (droid?) who wrote the manual. What a piece of work!

For anyone interested, here are some Type I (Size code 1) equivalents to Type II IDs. The first digit of the Type I code is Type II code MOD 8192. The rest of the digits before the dash are MOD 64 on the remainder, and the digits after the dash are MOD 16 on the remainder.

Type II Type I (Size code S-1)

Glen, if you're so smart, why is it that YOU never post anything about scanners? All you and that Mackey do is flame. If you don't like what you read, why don't you just get the hell out? Looks like it's time to turn the bozo filter on and get rid of the number one loser around here. See ya BOZO!

[the usual anti-Cheek rantings of a lunatic deleted]

Quackie Mackey, if you're so smart, maybe you can help out some of the kind folks here with an occasional on-topic post. So far, you posted 40-plus off topic messages this week, and not one about scanning.

Look around little man, maybe there are posts that you actually answer. Naw, that would be too much to ask. You've got your hands full carrying on your personal vendetta, engaging in electronic stalking, posting flame after flame, impersonating other users, issuing rogue cancels, broadcasting forged messages, lying to everyone in sight and whining about your petty grievances going back to the days when you were booted off the FidoNet radio forum.

> My BC350 has an occasional loss of memory (memloss) -- this problem has become
> quite annoying. I have this radio mounted in my car and is powered from the
> accessory circuit. Is there a "fix" of something I can do to the circuit. I
> have looked over the circuit board looking for cold solder joints or visible
> defective components but have spotted nothing.

The BC350 was one of the first ones with EEPROM memory. It does
not need batteries or constant power (except for the clock).

Are you ending up with weird frequencies like 9xx.xxx or 6xx.xxx?

Is the display dim?

The same DC-DC converter that powers the fluorescent display also
generates voltages for the EEPROM and processor. If the converter
is starting to fail (and it will), the memory could be getting
corrupted. This happened to both of my 350's.

To make things worse, as the converter starts to fail, the unit
has problems "starting up". Usually, the display is blank with an
open squelch occompanied by a "ringing-pinging" sound. Turning it
on and off a few times brings it back to life. Does this happen
to you?

Read the Scanner FAQ by Bob Parnass. There is a section about the
BC350 and the "C98" problem. Basically, replace C98 (next to the
little transformer near the front of the RF board) with a
47uF/35V electrolytic cap (Tantalum recommended - both avail at
Radio Shack). These capacitors fail after about 8 years or so.

The 350's are *loaded* with bad solder joints. Even if they
"look" good - resolder them. Check that the mounting bolts have
not cracked the PC board in the corners, and make sure they are
tight (not too tight, or you'll crack the PCB). Resolder all the
grounding and shield connections, especially the one that is
riveted to the back panel. My guess is that life in an automobile
may have taken it's toll on the poor soldering job.

There are also a few IC's in sockets. Make sure they are firmly
seated. The 14(?) pin one in a socket mounted on the back of the
keyboard PCB is the memory chip. Make sure it is firmly seated.

Good Luck!

Cheers,
Paul Grohe

What's really sick is that the FCC has nothing to do
with the kinds of examinations he performs.....

> > Truth hurts, huh Bill?

> Oh yeah I bet he's cowering under his keyboard this time loser. Oh yeah,
> he's shakin'....

"Truth" from that peckerwood is worse than no truth
at all. There isn't a thing that comes from him that
has any relevance or relationship to anything meaningful.

> > Why don't you try telling us more stories like there is no
> > UV effect on coax or tell us it is OK to use a mettalic
> > tuning tool on an RF oscillator!

Gawd....he's swooning on that again? You know, I asked
the degenerate reprobate to tell me exactly WHAT was the
proper tool for the adjustment in question.....and he
never did reply. Yet I specified a #3 flatblade jewelers
screwdriver from Radio Shack....which is about as exact
and specific as it gets. And yes, I said it was Okay....

....because it IS okay. Doesn't get any more exact than that.

Amazing how the nitwit doesn't know which coax's are tolerant
of ultraviolet. He was out wallowing in his pantyhose one
afternoon and got the bejeezus of sunburn...and now thinks
the sun eats coax. What a relationship there. The ninny has
lost all cognizance of basic reality. He's trapped in virtuality
somewhere....probably a video game......

> and mess up your PRO-10 because you wouldn't know a soldering iron from
> a 9 iron? All together now everyone: "Awwwwwwwwwwwwwwwwww...."
>
> Why don't you shut up John. It's not Bill's fault that your idea of an
> engineer is "the guy who drives the choo-choo".

He can't shut up. He is one of those kinds of degenerate
reprobates who thrive on abuse. He invites it. He begs for
it. He shrieks in the dark of the night, "Ohhhhhhh that
hurts sooooo gooooooood."

The peckerwood's arse is still burning from back when I kicked
it sailing through the air off a FidoNet messaging forum. He
liked that so much he's been screaming for more ever since.

Which reminds me.....if that peckerwood could peck wood, how much
wood could the peckerwood peck if the peckerwood could peck wood?

Did you ever hear the story about his eyelids and eyelashes?
If not, it may enlighten you to his "condition" that contributes
to the way he is.

Oh, and he had a 20-ft tapeworm not too long ago. Ask 'im
how he got it cured up? heh heh heh heh.....

Barry Goldwater did a lot more for Amateur Radio than most folks would ever dream of.

Vietnam and Korea were only 2 instances of his willingness to help others.

However, Amateur radio is but one small facet of the larger picture that he created.

So Long Barry!
Hope to QSO with you from wherever you might be!

> anyone know of any mods worth doing to the 2021? being memory,speed,etc.

Speed is hardly worthwhile as there is some danger of
blowing the CPU.

Memory can be expanded to 12,800 channels or more by
replacing the resident 2k x 8 SRAM with a 128k x 8 SRAM
and externally switching the six "extra" address lines.
2^6 = 64 memory blocks. 64 x 400 = 12,800 channels.
Also 640 Scan Banks, etc.

The procedure is well written up in books and newsletters.
It isn't something that lends itself to putting in so
many words or less in a newsgroup.

> Is there any disadvantage to using Type I IDs in this manner ...

An S1 size code allows 128 fleets, but the BC-895 (and, I assume,
it's Uniden siblings) displays only two digits for the fleet. This
would appear to be a design flaw in the TT, even if few trunks would
actually assign fleet numbers > 99.
If the TT actually chokes on fleet numbers 100-127, then 22% of
the possible type II talkgroups could not be displayed as Type I IDs.
Size code S5 would avoid this problem, as well as grouping all special
functions for a Type II talkgroup as one ID.

Ahh yes ... a wonderful antenna indeed. The only one that I ever had any luck with pulling in those distant signals, and the most reliable for skip reception! It's too bad though that they are so hard to find nowadays. Mine succumbed to the natural elements after about 8 years. (The plastic insulators between the vertical elements dried out, broke, and the wind took it from there).

I know a guy who still uses one ... I've been trying to buy it from him, but no such luck. I still have my eyes open though, and given the opportunity, it will be up once again on my mast.

> When it is searching the 800MHZ band, I hear cell phone conversation.
> According to your site, is this scanner illegal or is the monitoring
> illegal? Or both?

The way the law reads today, it is not illegal to own a cell-capable radio nor use it, per se. It is illegal to import a cell-capable radio, illegal to modify it to receive cell frequencies and illegal to listen to cellular phone transmissions regardless of how they are heard (directly, through images, intermodulation, down-conversion, etc). So there is nothing illegal about your radio but you are picking up images of the cellular frequencies and to listen to them would be illegal (per the letter of the law).

It is also illegal to listen to cordless phone transmissions but nearly every scanner ever made picks these frequencies up easily. The powers that be have not seen fit to block these ranges from present-day receivers like has done for cellular.

Hope this helped and best of luck with the new radio!

More laws, rules, and regulations is never a good thing when we currently find ourselves drowning in legislation.
Who exactly is being hurt by allowing scanners to receive cell reception?
What civil right is being violated by allowing these things to exist? There is none. This won't stop at cell phones. There has already been talk of making monitoring of police, and fire frequencies illegal. There are many states now where it is illegal to use a scanner in a vehicle. Is this the USA, or the (former) USSR? Lately it is getting harder to tell the difference. It is not about scanners, it is about personal freedom.
There is a presidential executive order already signed which will (when invoked) make illegal the use of any scanner, or Shortwave radio. When will this be invoked? Your guess is as good as mine. I'll try to find the Order number, and post the relevant passages here...

Too many people just don't care, as long as domino's deliver on time, and the cable TV works.

671. FYI - Proposed action on Scanner laws

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: John Mackey - KA0SSF <ka0ssf@parg.org>
Message-ID: <35788DBC.468D@parg.org>
Source record: 158379

The below is from today's ARRL LETTER:

The FCC plans to further tighten its rules on scanning receivers to prevent reception on cellular telephone frequencies. In a rulemaking notice released June 3, ET Docket 98-76, the FCC proposed to require receiver filtering adequate to prevent cell phone reception even when the receiver is tuned to frequencies outside the cellular telephone bands, such as an image frequency. To prevent modification of legal receivers to receive cellular frequencies, the FCC wants scanning receivers designed so that the tuning and control circuitry is "completely inaccessible," and that attempts to modify the receiver "will likely render the equipment inoperable." The proposed rules also would prohibit scanner kits.

The FCC said the proposals were in response to a petition (RM-9022) from Uniden American Corporation, which manufactures both cellular telephones and scanners.

The proposed rules would affect Amateur Radio equipment that includes scanning capability, as defined in the FCC rules. The FCC has invited comments on whether it should modify its definition of a scanning receiver to include units that can be manually tuned or which automatically switch among fewer than four frequencies.

The FCC wants to require that scanners provide at least 38 dB of rejection for cell band signals at any frequency the receiver can tune. The FCC also proposes that scanners be unable to receive a signal level of 5 mV/meter or less in the cell band at any tunable frequency.

The FCC suggested covering control and tuning circuits with epoxy or some other substance, or encasing them in a non-removable metal compartment, to make them impossible to access and modify. The Commission also plans to ban the import or manufacture of scanning receiver and converter kits capable of receiving cellular frequencies. Test equipment would be exempted from the definition of a scanning receiver, however.

The FCC also proposed modifying the rules to make it clear that modification of scanning receivers on a substantial scale to receive cellular frequencies would be the same as manufacturing, which already is illegal. The FCC took the opportunity to point out that it's still illegal to modify receivers imported or manufactured prior to the effective date of the current scanning receiver rules. Those rules became effective April 26, 1994.

The FCC has opened a 30-day comment window. The complete petition is available at the FCC Web site at http://www.fcc.gov/oet/dockets/et98-76/.

Hardly true, all the problems started about a week BEFORE I
entered this thread. I had nothing to do with it.

Don't believe it? Then go look in Dejanews for how the
winradio thread started a few weeks ago. It started with
Bill Cheek flaming a guy because he gave an opinion
differing from Cheek.

Truth hurts, huh?

683. Cheek/Mackey Bandwidth Waste Index

Newsgroup: rec.radio.scanner
Date: 1998-06-06 00:00:00 UTC
From: CharlestonRhett@yahoo.com
Message-ID: <35789770.554310@news.mindspring.com>
Source record: 158391

For what it's worth, I just logged onto rec.radio.scanner. I had 46 unread messages and 25 of them concerned Beavis and Butthead rather than scanning. That's 54% B&B, 46% scanning for a bandwidth waste index of 46.

Goal for June: let's get it down to less than 10.

RB

Heh, actually I figured it out myself. I was just to lazy to read some of
the faqs before ;) All you have to do is open up the case and wire pin 9 of
the KA3361 IC to the center pin of an RCA jack, and ground the rest out.
Its worked for me so far with decoding POCSAG and DTMF. Hope that helps.

Source record: 158116

Going from memory here..........the 3 to 5 digit numbers is one way your scanner follows trunking, the others (400-2) is another way it tracks trunking. It is how you program your scanner. I have a RS Pro-90 and I use the 400-2 methos as you can hold your scanner on that ID number and if it is the correct fleet map for the type of trunk system the agency uses, you won't miss a thing. I used to track my local police witht he 3-5 digits but found that 'channel 1' traffic was being monitored by me on several of these ID numbers (thus, harder to track a specific channel by holding your scanner on a partivular 3-5 digit ID number). I use the preset fleet map E1P1 for my local police and it works great. Your scanner should have 16 preset fleet maps and if you experiment with each of them (listen to the broadcasts of the people you monitor) and try to see if there are any 'gaps' in the conversations you are following. If it seems you are not missing any responses in the conversation, you probably have the correct preset fleet map. Of course, you can program your own fleet map, but it seems too difficult without first experimenting with the 16 presets.

I am a man of my word. If you remember, I suggested Bill & I STOP
all posts of any type of flaming & such. He complied with this
agreement for a couple weeks. Then, when he thought I was off line
at the DAYTON HAMVENTION, he started again.

As far as the 64 and 2041 go, make that "apparently not" a firm "no". GRE has a full two-way protocol that allows setting lockout, delay, etc. I don't know which (if any) scanners use the full protocol, but the 64 and 2041 use a one-way version of it. The spec for the one-way version says just channel and frequency. I've tried sending my 64 every possible permutation of the two-way codes. Ones that don't change the data stream format just get ignored. Those that do change the format cause the scanner to barf.

I figured out how to get Mackey's goat. It would be neat to delete the word "cheek" from any subject line when wacking the Mackey.

He'll insert the "Cheek" word in every subject line, no matter who he's arguing with.

Take a wack at Mackey. But when you click on the "reply to idiot" button in your newreader, simply delete "cheek" anywhere it appears in the subject line.

Not only will this make Mackey mad, (ok-ok-ok,.....madder), but everyone who puruses the NG subject lines will see Mackey's obsessive "cheek" streak.

Give it a try. I'm starting tonight.

$300 for a 200xlt with a bad battery, no antenna & no charging
adapter????? I will admit that the 200xlt is a nice scanner, but that is
pretty steep! I sold mine not too long ago for $150 (cell mod done,
antenna & charging adapter included).

From: ROBERT J FORLINI <FORLINI@prodigy.net>
Message-ID: <6lfi7q$d2go$1@newssvr04-int.news.prodigy.com>
Source record: 158148

I bought and returned the Pro-91 because I also noticed the high noise level. The salesman told me that the Pro-90 is made by Uniden and the 91 is not. If you put them side by side, they do look different. He also said that there is a new 150 channel version of the 90, also made by Uniden, due out soon and recommended I wait for that one.

Bob

John Habbinga wrote in message <6kqnt3$70b$1@news4.wt.net>...
>I like the Pro-91. I too like the battery arrangement. I don't think the
>fact that the Pro-91 only has 150 channels is too much of a disadvantage. I

739. State of Florida digital voice

Newsgroup: rec.radio.scanner
Date: 1998-06-07 00:00:00 UTC
From: R J <randyj@mpinet.net>
Message-ID: <357B51F9.743F80B4@mpinet.net>
Source record: 158149

The State of Florida DIGITAL VOICE trunk system in the Orlando area.
It has been digital in the Miami area and is being installed throughout
Florida.

Frequencies in MHz (minus 45 MHz input) Orlando area:

866.9375 .9625
867.4375 .4625 .9375 .9625
868.4375 sometimes trunk data
868.9375 sometimes trunk data

Possible future frequencies not yet used in the Orlando area:

866.4375 .4500 .4625 .4750 .4875 .9500 .9750 .9875
867.4500 .4750 .4875 .9875
868.4625 .4750 .4875 .9500 .9625 .9750 .9875

Turnpike Patrol, Highway Patrol verified in the Orlando area.
Trunk IDs:
1027
1088
18432

The Florida Sunshine open Government law should apply to scanner
manufacturers to allow production of digital radios.

Their is no reason to consider most of this routine radio traffic
private from law abiding citizens.

Especially State, County, or local Government services.

Digital voice is an improvement from analog voice radio.

With knowledge of Federal Government communications before the FBI went
digital in Memphis, TN in 1981 and remodernized their system in 1989
throughout Florida, it is understood why the FBI and other Federal
agencies digital voice is suppose to be confidential.

743. Commercial LMR Radios won't do Cellular?

Newsgroup: rec.radio.scanner
Date: 1998-06-07 00:00:00 UTC
From: Andy M <enzo@ibm.net>
Message-ID: <357B85BE.2BDA@ibm.net>
Source record: 158153

Does anyone know if the ECPA act applies to commercial 800MHz two-way radios destined for the USA? I've been told that Kenwood's mobiles, and other LMR radios, cannot be programmed into the cellular frequencies!

My company's radios won't do it either but that's due to a design constraint on the Rx engineering and nothing to do with the ECPA.

Anyone know?

Cheers!
Andy

747. Dialup FCC Database for searching, applying, etc

Newsgroup: rec.radio.scanner
Date: 1998-06-07 00:00:00 UTC
From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <6lfv85$4hc@news.snowcrest.net>
Source record: 158157
Cross-posted to: alt.radio.scanner,rec.radio.scanner

The FCC has just established a direct 800-number for computer dial-up into their databases. To apply for or change licensing info you need a password, but SEARCHING doesn't require it. They even tell you how to set up your computer's dial-up networking, then you use your browser and search. So you can now bypass the internet and go straight in to the FCC! They say AOL's browser won't work, "you must use either Netscape 3.01 (or higher) or Microsoft Internet Explorer 3.02" or higher.

The info is at http://www.fcc.gov/wtb/uls/

HOWEVER, I don't see a link to the general database, so once you connect with the 800 number, go HERE with your browser:
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

Looks like the gov'ment has done something right for a change...

Utterly slick and fabulous, IMHO.

> It is supposed to decode packet and fax among
> other things.

I haven't messed with packet yet, but everything
else I've tested and it works! I'd say it's all
worth it and more.

> Also is there any mods for the winradio?

Not really, unless you've got an older unit, in which
case it can be brought up to current standards. You'll
need to refer to the selected back issues of either
Monitoring Times or the World Scanner Report for that
information as it's much too detailed and full of
graphics to post here.

Also, there are cool ways to import and export
WiNRADiO file data..... For that info, you can snag
two files from my FTP site:

perl95nt.zip
wrcnvprl.zip

ftp://204.210.11.204/winradio/

These files and information make it real easy to put
lots of data INTO WiNRADiO's files or extract that
information for use in other ways. Have a ball!

The "girlfriend" is one thing, but them kids
are "bedwetters", according to Smacksie himself.
I caught him posting questions about them to a
self-help newsgroup last year. From the sound
of it, them kids are freaked out when Smacksie
is around. No wonder they're bedwetters.

Oh, and the "girlfriend" is a 380-lb squaw from
the Paiute tribe. FWIW.

761. Alinco DJ-X10 discriminator output

Newsgroup: rec.radio.scanner
Date: 1998-06-07 00:00:00 UTC
From: Sima <sima@technologist.com>
Message-ID: <357A2E12.3A74B813@technologist.com>
Source record: 158171
Cross-posted to: alt.ham-radio.mods,alt.radio.scanner,rec.radio.scanner

NEW! Alinco DJ-X10E modification for direct discriminator output.

Locate IC 31136 on the lower side of second RF board. Pin 9 of this IC
is
baseband audio (discriminator) output. If you don't need clonning
function,
you can trace one of the 2'5 stereo plug pin, cut it from other circuit
and
connect to 9 pin of 31136.

Now you have audio and discriminator output in one receiver with
0.1-2000MHz
coverage. Have a nice scaning! :)

p.s. more information about this receiver and your comments send to
sima@technologist.com, please.

He's got some decrepit piece of crap that gets 10 channels and he has only managed to program three. The reason that you will never see anything on-topic from Quakerel is that he knows squat about scanning. His sole purpose it to disrupt this group with electronic stalking, personal vendettas, imersonations, forgeries, lies, censorship and similiarly nefarious activities.

His agenda is to post flame after flame in hopes of driving as many people out of the group as he can. We've resisted him for a long time and periodically, when he senses that he has lost his cause, he goes away. He's posting at a rate of about 10 flames a day for the last 7 days. He's on a record pace at the moment.

Okay I must be crazy. But I'm trying to raise capital for that
end-all, do everything radio. Prefer Atlanta area residents so we
don't have to deal with shipping and COD.

PRO-43 Scanner for $150.

This is similar to the current Radio Shack PRO-51. Handheld scanner
with 200 memories. 30Mhz to 999Mhz. am and fm with ni-cad batteries.
Used but in very clean shape, low serial number (<1500). No mods have
been made but plenty are available if you want to change the coverage.
I'll even leave it programmed (Marietta GA area frequencies, local
airports, frs, gmrs, wireless stuff, 2m and 440 ham, etc.). With
Ni-Cads and charger. Make offer

You could try what I use....a Radio Shack TV Signal booster.

For 29.95 , it will Boost any signal 30db in the 50 - 960 MHz range.

You will need to re do the ends of your Coax with "F" connectors , (Cable Tv
)

did wonders for me !

Even had a adjustable gain knob....from 0 db to 30 db....my airport came in
rather scratchy as well...I heard the planes on 123.0 MHz , but never the ppl
on the ground, now all is fine :)

Try a freq of 123.450 MHz , thats plane to plane chit chat in Canada , freq
may work in the US as well , good freq to listen to Pilot chit chat.

73 , & Happy Signals

"Chips" will always have an even # of pins, i.e, 8, 14, 16 & divisible by 2. If it started with 0 on a 8 pin chip you would have 0 - 7 pin numbers. You may be confused by what a manufacturer has printed in a service manual, but the physical numbering starts @ #1 just CCW of some kind of marking on the top of the IC/chip & always looking @ the top of the chip where the printed info is.

I recently purchased a trunk tracker and could use some assistance. It has
been working fine but I am a little confused. When I have been tracking this
system in my area the numbers come up for instance 3393. 1024, 4014 etc
now I am tracking the same system and getting numbers like 400-1 300-4 and
things of this nature. Did I do something wrong hit a wrong key on the keypad
or didnt something change with the system. I am a little frustrated with trying
to figure out what I did if anything or maybe this is correct that things
change
automatically Any replies would be much appreciated
Thanks in advance

Military aircraft in the United States use five primary frequency ranges for radio communications.

1.6-30.00MHz (USB mode) - These High Frequency (HF) or shortwave frequencies are used for long-range communications, often for phone patches between the aircraft and their base or destination.

30.00-88.00MHz (NFM mode) - commonly used by Army aircraft, and USAF aircraft such as the A-10 which frequently coordinate their work with forward air controllers on the ground.

108.00-137.00MHz (AM mode) - the so-called civilian VHF airband, you can also hear military aircraft here, particularly the tankers and cargo aircraft. The majority of communications here are with air traffic controllers. Most military airfields have both VHF and UHF frequencies.

138.00-144.00MHz (AM mode) - although this is technically a military land mobile band it is heavily used by aircraft for tactical and air-to-air communications. F-16s seem to prefer this band.

225.00-400.00MHz (AM mode) - the UHF military airband. Comms here include air traffic control, air-to-air tactical, refueling, air-to-ground attack coordination etc. Almost any type of communciation can be heard here.

Please note, these are rough guides only. Many military aircraft have equipment that can operate out of band, and they sometimes use it, popping up on ham frequencies, public safety frequencies or anywhere they want. Remember, they're from the government, and they're here to help you. ;-)

> connection or batteries only?

Good point! I've tried both. To be more accurate, I should have indicated
that the interference on 46.14 occurs anytime the scanner is powered from
the vehicle *or* connected to an external antenna.

It does *not* occur only when it is powered from its own ni-cad batteries
and using the stock rubber duck antenna. That is not bad, but the
interference problem stops me from either running from the vehicle's power
or improving reception with an external antenna...

Now I haven't tried it with *both* power from the car and an external
antenna. But that shouldn't resolve it...

Yes, the 3000xlt is a handheld.

> If so you could try holding the broad-band out the window (in your
> hand) and see if that cuts down on interference. If so use a mount
> that won't let the antenna touch the car.

...or I could just hold the scanner out the window, right? ;-)

The broadband antenna is one of those cellular lookalikes. I had used it on a previous vehicle, hadn't taken time to install it on this car. It fastens onto the rear window. I have installed it now for the duration of figuring this out, maybe longer, if I can get it to work without the interference. In theory, the window mount should be insulated from the vehicle, shouldn't it? That's why I thought that one would work better than just a patch off the FM or an old CB radio, both of which I tried earlier to see what results I might get...

Thanks for your help...

Here are a couple of lines from the instructions I used many years ago (that worked).

Locate the microprocessor IC labeled "UNIDEN UC-1147" and the 10k ohm (brown-black-orange) leadless resistor positioned above the letters "DEN" on the IC.

Using miniature wire cutters, cut the resistor body in two without disturbing anything else near it. If the left solder pad comes loose it may be peeled from the board. Brush or blow away the residue. This completes the restoration.

If you are unsure of what you are doing, you really do not have to. In the 400 & 800 & 900 Mhz range you can just add 21.7 and pick up the real frequency anyway.

>I'm attempting the cell mod on my scanner. I found the UC-1147A chip.
>Above the "den" portion of "Uniden" is a silver thing marked "103". Is
>this what I'm suppposed to cut? Please email answers. Thanks in advance.

Be very careful!! Not all scanners cover the ranges you need for mil
air. You need the normal civilian air band 108 - 137mHz + 137 to 144mHz
(AM & FM selectable), and 225 - 400mHz (AM/FM (mil sats 260 - 270mHz)).

Does anyone here have any confirmed frequencies in the 225-400 Mhz band? I've been trying to listen for years with nothing heard.

Frank

788. FS Icom R10 no gaps

Newsgroup: rec.radio.scanner

Hello All,

I have a Icom R10 for sale , Full coverage, 500khz-1300mhz, no gaps,

4 months old, manual, antenna, strap, nicads , charger/supply,
original box,
excellent condition. $325.00 shipped

I'm starting a new hobby and have to thin out my current stock of

equipment to pay for it.

thank you!

Jeff

Good grief. Grow up, all of you. Turn off the computer and go for a walk. Read a book.

Life is short. Do you really want to spend it saying "You're a bigger one" over and over?

791. Kansas Column 0698

Newsgroup: rec.radio.scanner
Date: 1998-06-07 00:00:00 UTC
From: andy <andyb@qni.com>
Message-ID: <357AC509.4835@qni.com>
Source record: 158201

Kansas Column 0698

The column is later than usual this month. Why? It is because I am on vacation. One would think that being on vacation would supply oodles of time for things such as writing a column, but not so for me. I had so many things to do around the house, and took a short trip to Las Vegas, that I had little time for anything else. My wife had me install some outdoor low-voltage lighting, plant 23 bushes, repair some siding, place cement step stones in the front yard, plant tomatoes, clean the shop, spray our 4 acres of land for thistles and dandelions, level out the dirt left by the backhoe operator who put in a natural drain west of our house, dig a hole for a swimming pool and put an elevator in the garage. I lied about the last 2 tasks, but the rest were true. Those mentioned were just the highlights. I can hardly wait to get back to work so I can get some rest!

1. "New" PRO-2006 clones?
2. Lawrence, KS and North Kansas City shared frequency
3. North Kansas City trunked system
4. New Leavenworth County FD freqs
5. KHP Centralized dispatch
6. JOCO FD/EMS and 867.1375
7. Bonner Springs FD radio number clarification
8. KCMO Ericsson SNAFU
9. Leavenworth CO 800 conventional system & statewide EMS 800 conventional
10. Douglas CO/Lawrence KS low power simplex 800 stuff
11. Great Mall of the Great Plains
12. Doyle
13. Trunker program assistance needed!!!

---

1. My Radio Shack PRO-2006s (I am lucky enough to own 2 of them) are getting rather tired. The thought of needing to replace them has been floating in and out of my mind the last few months, but what current radio in that price range could fill their "shoes?" They are highly modifiable, outstanding performers with full frequency coverage, and are simply the best darned scanners to hit the market IMHO.
Well, while poking though the newsgroup "rec.radio.scanner" I saw someone mention a European handheld scanner called the Commtel 215. It was reported to be a clone of the US version of the PRO-26 without the cellular frequencies being blocked out. To make a long story short, I dug around until I found a European dealer for Commtel scanners and began an exchange of e-mails with them. According to the dealer, another Commtel scanner called the Commtel 205 is a clone of the 2006.

It is made in Japan, not China, so the parts are probably of the same quality as when RS sold them. The price is $359.
In one e-mail I voiced my concern about the radio being confiscated by Customs at our borders, but he said in the years they have been shipping to the US, not one has been nabbed. He even offered to ship it in a plain wrapper with no store logo or other indications that it is being shipped from a radio shop.
I haven't decided what to do yetï¿½$359 is a lot of bucks, and my wife handles all our finances. Not only does she oversee the money in our family, she carries a gun! (The bullet wound scar from my TrunkTracker purchase is nearly gone, but it is in a spot no one but she and my doctor would ever see anyway.) If I take the plunge and buy one, I will be sure to relay all the information to you. Should one of you decide to try it first, please do the same. Here is the web site address for the dealer:
http://www.cbshop.com/

---

2. Bob made a discovery that has both bad news and good news. He lives where he can monitor Lawrence KS, and has been listening to 856.7125, which is a stand-alone channel assigned to them. Once it came to life, he found out it was not only Lawrence, but North Kansas City's new trunked system as well! His radio will operate using DPL tones which allows him to block out any transmission without the particular tone he selects. That would give him the ability to stop NKC from being received when listening to Lawrence. I have not been able to find the DPL tone, but I must admit I have not exhausted all my resources yet. Anyone with that info should let us know so Bob can listen in peace.

---

3. North Kansas City's new system is reported by Bob to be an analog non-Ericsson system due to the lack of the nasty series of tones at the end of each transmission. For reason stated in the first paragraph, I have not been able to listen to it, so I am depending on you folks to help confirm what type of trunked system they are using. Try 856.7125, 857.7125, 858.7125, 859.7125 and 860.7125.

---

4. Dr. Smoke indicates that Leavenworth County FD is getting 2 more frequencies. They are reported as 150.805 and 154.130, but no activity yet. Those freqs are not 100% confirmed yet.

---

5. Ray from the Salina area says they are having no problems with their new KHP centralized dispatch center. I do not recall mentioning this before, but Ray dispatches for them, so he should know! Latest word from him is that KHP Troop C (Salina) will be on 800 MHz by the end of this summer. Towers have been installed in McPherson and Mitchell counties, and most of the cars have been wired and "antenna-ed" for 800. No radios yet, but that part is easy once the wiring is in place.

Ray says that whenever a Trooper is issued a new car it comes wired that
way already. Not a bad idea. Thanks, Ray, for that update.

---
6. Dwight is a supervisor for Johnson County Fire/Med-Act dispatch, or
more correctly called the Emergency Communications Center (ECC.) He has
been working the consoles there for many years, as well as taking care
of their in-house computer system. He is also a scanner/radio geek like
us. Last month, Gary mentioned that he had been hearing Med-Act
dispatch on 867.1375, which is not one of Johnson County's trunked
frequencies. Dwight informed me that they have been pumping traffic on
that conventional channel is due to the "use it or lose it" phenomenon.
That frequency will eventually be used for Automatic Vehicle Location.
The ECC is in the process of purchasing an AVL system, so look for that
frequency to come alive with some digital junk real soon.
I wonder how hard it would be do decode that stuff? Bet someone will
come up with something someday!

---
7. More from Dwight. One of his dispatchers is also a Bonner Springs FD
volunteer, and he had some details on the change for their FD radio
numbering system. Bonner and Edwardsville are soon to be handed over to
one of the law enforcement zones on the KCK/BPU trunked system. Bonner
and Edwardsville are in Wyandotte County, and all city/county services
are on that system already. Dwight was unsure which talkgroup/zone it
will be. In order to avoid confusion, the radios numbers have been/will
be switched to the 2500 series.

---
8. Bob from the Tonganoxie area offered the following:
"In a new development the mayor of Kansas City, MO, whose administration
has been exceptionally graft-ridden with several officials indicted
and/or already convicted, has made a public statement taking the blame
for the defects in the infamous KC police and fire radio system. This
means that the city will have to finance the 8 to 10 million additional
dollars in upgrades projected to be necessary to make the 18 million
dollar system 'work.' For months the city had been making loud noises
about suing Ericsson, and several police officers and fire fighters had
already filed personal suits.
This 'admission' will probably have the added effect of covering up the
processes by which the original deal was made, since it would probably
take a court proceeding to bust loose all the information. It will also
render the lawsuits by the individual officers moot, although they can
probably try to sue the city govt. now if they wish.
Anyone wishing to look into what details are available might want to
start with http://www.kansascity.com and follow links to the various
media to see what they have today. The Kansas City Star newspaper might
be the best place to start."
Government in actionï¿½

---
9. He also has this note on the Leavenworth County 3 channel 800 MHz conventional system. It has been 5 years since the system went on line, and to date there are still many areas in the county where the deputies cannot receive their main dispatch channel 851.5625. Their other freqs are 852.5625 and 852.5625. Bob quips with "can you say 'not ready for prime time?' " Government in actionï¿½
Bob, the "energizer bunny" of the Kansas scanner scene, just keeps on going with some more good poop. Last month one of the folks (Gary) mentioned hearing some EMS phone patch attempts on 867.9125. That is reported as a statewide EMS frequency. Bob poked it in his radio and heard it come to life with 3 patch attempts. The dialer got the dial tone, punched in a phone number, and kept getting the Ma Bell message of "We are sorryï¿½." There was a Morse Code ID given, but he got only the last 2 characters of 87. Another piece of the puzzle. It might be interesting to have someone with a DTMF (touch-tone) decoder discover what phone number(s) they were dialing. Hint, hint, hint.

---
10. Bob's batteries have not gone dead yet, so here is some more from him. Around Leavenworth he hears 855.7375 as a low power simplex channel in or around the Lawrence Justice Center and CourtHouse. The radio numbers used were 121 and 122, which used to be Lawrence PD car numbers. No DCS tone captured yet.
Additionally he listens to 866.7375 that is also a simplex channel. They ID themselves as "Control Desk." DCS tone of 432. It is licensed to Leavenworth County Sheriff. Bob suspects one is the Douglas County Jail and the other is Courthouse Security, but he has not been able to decide which is which. I would bet that the one with "Control Desk" is probably the jail. My lovely and gracious wife, Lois, spent 3 years in the Johnson County Jail (as a deputyï¿½NOT an inmate!) and she said that jails routinely have one or more areas called "control."
He confirms that the N.E. Kansas Juvenile Detention Center in North Lawrence is using 855.7375 with a DCS tone of 351. The aforementioned user of 855.7375 shares it with NEKJCD but with a different tone. The NEKJCD units use radio numbers in the 1600s.

---
11. Here is the information you all have been waiting forï¿½the scanner discovery of the monthï¿½the answer to the puzzle that has been on all of our minds, which is "What frequency is the new Great Mall of the Great Plains in Olathe using?" Wellï¿½it has been bugging me, anyway. Months ago I found 861.0875 was an active frequency there. Word was that they were on a trunked system, but I had no luck finding out which one. Exhaustive research (scanning while sitting in the parking lot as my wife shops) makes me think that they are not trunked at all. I hear all the security and maintenance people on 861.0875. I was able to receive both sides of conversations with no missed transmissions. Obviously not trunked. Using the Trunker program (see the Feb 98 column, article 3, archived at Dr. Smoke's site http://www.crcltd.com/sm0ke/scanner/) I

could find no trunked system using any frequency ending with .0875. It is entirely possible that other stores there may use a different frequency, but they are no doubt simplex, too.

---

12. Doyle has been sending some interesting information to me, but it has not necessarily been scanner related. Humor has been the subject. I just wanted to publicly say "thanks" for the stuff. Much of it has made the rounds at work.

---

13. My wife let me buy an OPTOElectronics computer interface board for my 2006. It was the OPTO Lite version at $99, so there was no gunfireï¿½just a superficial knife wound. (Just kidding, Lois!) I am still a big fan of Bill Cheek's CE-232 interface, but the OPTO unit works with the various Trunker programs. Now I can follow the trunked systems on the computer. My only problem is that I am having trouble getting a good, clean signal of the control channel into the computer. The Trunker programs have an indicator showing the percentage of accuracy of reception. Many times I cannot get a good enough signal to the computer to get to the recommended minimum of 80%. I have a signal strength meter on my scanner, and the signal to the scanner is STRONG! It lights 8 of the ten LEDs. There is no lack of signal strength. These problems seem to be unique to the Motorola version. Here is the catch. The older Trunker version 3.5.2, which does not support the OPTO unit, receives a quality signal that yields a consistant 95% or better accuracy rating. Without changing the antenna, radio, frequency or anything else, I can switch to the most current Trunker version I have (beta Feb 1998) and I get a measly 50% rating. With the Etrunker program and the Overland Park Ericsson system I get 100% accuracy! Aaaarrrrrrgh! My computer is a Pentium 120, so speed is probably not a problem. I am using a modified data-slicer with a single com port. If anyone has any ideas, send a note to meï¿½PLEASE!

That is it for June. I am looking forward to input from you so we can keep the Kansas Column going strong.

Andy

I have done the mod several times. The hardest part is disconnecting the upper and lower boards...be very careful. Also, be sure to make a list of all your frequencies prior to splitting the boards because your memory is reset on some of the pro34's when you take the boards apart. I have done this mod and had the frequencies all clear and on another one it held the frequencies...better to have them written down just in case.
Good Luck....word of caution: If in doubt...leave it alone...they are real easy to mess up.

I used to have one and it picked up VERY strong images in the lower 800 Mhz range (where the trunked public safety usually are). I mean, it was as good audio as using a scanner that picks them up in the range they are supposed to be in.

Alternately, look for other frequency ranges on that model that might be scanned to pick up the cellular images.

Or - check that site that Reverend Tweek listed to find out the mod for it (I think it involved removing a diode).

good luck!

The TPS trunk uses less than ten frequencies (my Pro-43's and
8086 laptop confirm this). The remaining TPS frequencies are
conventional repeater channels (with the odd simplex channel
thrown in).

>Workaround?

Sure - use two scanners. (Or one scanner and a laptop!)

Chances are this arrest will be thrown out of court unless the officers developed an independent means of obtaining the probable cause. A murder-for-hire case here in Tampa was dismissed - and the dismissal upheld by the higher courts - when the trial judge ruled that since it's illegal to monitor cordless phones all the evidence that was developed based on the intercepted conversation was considered "fruit of a poison tree," therefore in admissable in court.

Hello All,

I have a Motorola Astro Saber, model number H04UCF9PW7AN that I would like to trade outright for a UHF Astro Saber. Prefer one with MODAT capabilities, and MDC decode, but please let me know what you have available. Also, please make other offers, I will consider all offers seriously.

Thanx
Mike

816. Another antenna question

Newsgroup: rec.radio.scanner
Date: 1998-06-07 00:00:00 UTC
From: gcrankbait@aol.com
Message-ID: <1998060703441100.XAA24773@ladder01.news.aol.com>
Source record: 158243

Since antennas seem to be a popular topic, I have a question I would like to ask some of you. I am using the $59.00 radio shack discone antenna. It is roof mounted on a 10ft mast and connected to my BC895XLT using RG6/U coax.

I am getting good reception (I guess) but was wondering if there was some type of powered signal amplifier I could hook up to it to get more gain and reach out
a little further.

For anyone in the D/FW area, I live in mesquite and would like to pick up the D/FW airport frequencies. Currently I cannot. I would guess I am probably 40 to 45 miles from the airport. Just wondering what type of reception other D/FW scanners are getting. I have picked up some of the regional approach freqs. but no control tower freqs.

Thanks for any input on this....

In this case I believe the police waited for the men to come to the
home. On another similiar note when I overheard conversations about
drug selling, the cops all but asked me to keep listening to get more
information. I didn't, however, because who knows it might have been
me with my scanner being confiscated.

jobyrnern@aol.com (Jobyrnern) asked:
> What are the blocked cellular frequencies in all the new scanners?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

In my experience with a UHF/VHF amplifier I got an increase in signal, but also got an increase in noise. It seemed to cancel any gains out. You may have different results. I use a discone from RS, probably the same one. I recently started using a directional antenna on a rotor and the results were much better than the amplifier. I also got even better results after I got rid of the rg-58 (got that tip from Bill Cheeks "Ultimate scanner" book #1 about 1 week ago), and replaced it with a higher quality belden cable (the number escapes me I believe 8259). I can look it up for sure if you would like when I get home tommorrow.

Anyhow that is "my" experience, I wish you success....

Derick

Did you hear this in Walnut Creek? About a month ago? There was
a similar item listed in the Police Calls section of the Walnut Creek
Record (or it was lamorinda or pleasant hill?) and the disposition
of the call mentioned was that the officer responded and told the RP
that it was not illegal.

> get that: throw-aways are now
> criminalized if you take them
> and then profit by them.....

Actually, it is illegal in some areas, if you actually dig them out of
the recyclable bin and not the trash... something to do with the garbage
sydnicate's lobby passing laws to protect their assets...

> what next?

You'd be surprised... some garbage companies issue residents a can
of spray with which to spray their recylables... and the local redmeption
centers use a black light to detect the stolen recyclables.

: is too crazy, know not to go in... :^))

: Replies via e-mail also, plz- my ISP only posts most of the traffic.

: aem sends....

I don't know if you can do what you are trying to do, but it probably does
not matter much-most consumer scanners are broad enough to receive signals
ok even if you key it in slightly off-frequency.
This applies even to some of the slightly better models:
To give a example:on a PRO-2006, there is very little difference in
reception between 476.7375(the real frequency) and 476.735 or 476.740.
All 3 of the above work!
Just key in the freq, and let the scanner round it-you will probably hear
the desired signal fine.

I am having the same trouble with my mobile CB. I went to the local
Radio Shack and was told their 'noise filter' would do the trick. I
installed it on the power supply leads as instructed. Guess what.
Nothing. Not a drop better than before. I have had some luck by
isolating the antenna from the vehicle and then grounding it through
the noise filter (removed from power leads). This keeps most of the
noise out, but is difficult to accomplish. Is the scanner a handheld?
If so you could try holding the broad-band out the window (in your
hand) and see if that cuts down on interference. If so use a mount
that won't let the antenna touch the car.

Good Luck.
Lemme know how it works out

I know that because of the number of dangerous storms this year and the publicity that the SAME weather radios are getting that RadioShack has sold out of them. They can special order them and ship them to you with no shipping charge, but they limit you to a quantity of two. (do you need two?) I would think that $80 each is pretty steep, but since they are sold out the price must be a fair market price.

<<Does anyone know who manufacturers weather alert radios with the new SAME technology, other then Radio Shack?>>

<<Oregon Scientific is producing a SAME receiver for about half the cost of the RS version. I saw them at Fry's Electronics.

844. The Death of John Mackey

Newsgroup: rec.radio.scanner
Date: 1998-06-08 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.SCREWSPAM.com>
Message-ID: <357CB123.112543D4@primenet.SCREWSPAM.com>
Source record: 157972

Infamous Internet stalker John Mackey was found dead at his dingy studio apartment in Portland, Oregon last night. Known for his relentless pursuit and harassment of technical author Bill Cheek, Mackey was found electrocuted in his bathtub. The coroner has determined that Mackey was indulging himself with an AC operated sexual appliance when the device malfunctioned, killing him in the process. Also found in the bathroom by the coroner was a VCR playing a Richard Simmons workout video.

Long considered hapless, incompetent, and inept, his death came as no surprise by those who knew him. Devoutly claiming to have held a Masters Degree in Communication Technology, Mackey could never provide credible proof when he was challenged to do so. After repeated displays of technical incompetence and blowing up numerous power supplies through idiotic interconnections, no one believed he had really earned the degrees he claimed.

After years of abusing Prozac, K-Y Jelly, cough medicines, and Preparation H, his behavior became increasingly erratic. He began to publicly proclaim his love for fitness guru Richard Simmons and boasted of patronizing child prostitutes. Shortly before his death, Mackey was seen performing billy goat gonad transplants as gland cures for the spermatically challenged and often went door-to-door collecting for static cling. Considering it his civic duty, he diligently tried to answer all his "occupant" letters.

Once known as King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity, he fell into disrepute in his later years, simply being known as a pitiful liar.

Before his death, he was active in the amateur radio group, Phony Amateur Radio Goon-balls. Having no relatives or friends who would claim Mackey's body, the coroner's office will cremate the remains in accordance with public law regarding the death of indigents. The ashes will be recycled into asphalt to be used in new public works projects. There will be no ceremony or public viewing.

Think about
>> > it...

Based on memory of a few years ago, cordless phones are not
illegal to monitor. This may have changed but I havent kept close
enough attention.
As I remember it, when the bill went through for cable tv,
satelite tv and cell phone monitoring, there was no provision to
make cordless phone monitoring illegal. I am guessing that this was
an attempt to make it easier for the feds and locals to wiretap you
without getting a court order.
Even as I speak, the feds are trying to force the cell phone
companies to provide easy access of your supposed "private" cell
phone conversations to the FBI.
I believe the official term for this work is called CALEA or
something very close to this. I may be mistaken on the term as there
are hundreds of acronyms in Gov. doings but the concept is really
there and is really being implemented now.

Have a RS Pro 90, and once in a while I get loud feedback type squeaking when the volume is turned up. If I tap on the front of the scanner it goes away. I think it may be something internal, but RS is telling me there is nothing wrong with it. Anyone else have this problem with the 90 or the Uniden model, and how can I resolve it?

I actually *found* the right adjustment tool for those pesky TCXO modules (a la PRO2004/5/6). You know the ones with the small, flat, cross-hatch pattern? It was at the Rochester fleamarket the other weekend. The fella wanted 24$USD for it. It's a stubby thing made of porcelain. I didn't bother getting one though. Much as I don't want to take sides in this "issue", a small screwdriver and a gentle hand does work fine by me.

Cheers!
Andy

|The below is from today's ARRL LETTER:
|The FCC plans to further tighten its rules on scanning receivers to
|prevent reception on cellular telephone frequencies. In a rulemaking
|notice released June 3, ET Docket 98-76, the FCC proposed to require
|receiver filtering adequate to prevent cell phone reception even when
|the receiver is tuned to frequencies outside the cellular telephone
|bands, such as an image frequency. To prevent modification of legal
|receivers to receive cellular frequencies, the FCC wants scanning
|receivers designed so that the tuning and control circuitry is
|"completely inaccessible," and that attempts to modify the receiver
|"will likely render the equipment inoperable." The proposed rules also
|would prohibit scanner kits.

Prohibit "scanner kits?" "Prevent modification of legal receivers..."
"Completely Inaccessible" controls...

Wow, you could almost take the federal gun control laws and plug in "scanners"
instead of "machine guns" and get the same result.

|The FCC said the proposals were in response to a petition (RM-9022) from
|Uniden American Corporation, which manufactures both cellular telephones
|and scanners.

So, our US rules are to be written by a JAPANESE CORPORATION; gee, awhile
back the Japanese were campaigning for increased US gun control laws and
more international regulations on small arms...

|The FCC suggested covering control and tuning circuits with epoxy or
|some other substance, or encasing them in a non-removable metal
|compartment, to make them impossible to access and modify. The
|Commission also plans to ban the import or manufacture of scanning
|receiver and converter kits capable of receiving cellular frequencies.

Sounds like the FCC is taking their que from Colt Manufacturing Company
who modified their AR-15 semiautomatic rifle to the "Politically Correct"
Colt Sporter rifle be placing a metal black in the receiver to show that
their rifle could not be easily converted to a machinegun...

|The FCC has opened a 30-day comment window. The complete petition is
|available at the FCC Web site at
|http://www.fcc.gov/oet/dockets/et98-76/.

Gee, all those Wild & Crazy Right Wingers(tm) heard on World Wide Conspiracy
Radio (WWCR) et al. appear to be have been right all along; it's a
"New World Order" afterall; our American culture, our Right to Keep and
Bear Arms, our long cherished right to radio receivers that could pick up

ANY frequency, slowly but surely being annihilated by "Progressives" who assert that to allow these American cultural icons is far too great a risk to the stability of "society."

Get out those pens and write your Representatives and Senators to point out that Asian corporations are now instigating rules that are intended to eviscerate our long cherished liberties; that perhaps Clinton's free trade policies might be giving these foreign corporations a swell head... and maybe we need a domestic manufacturer of scanners and VHF/UHF receivers that would be willing to design equipment more appropriate to the US market i.e. be willing to release the appropriate design information to allow third-party vendors to bypass the government regulations...

Sounds to me like your a typical asshole "agressive driver", how about it ?
"FRIEND"... am I right ? I see that kind of scum everyday, tailgating cars
doing the speed limit, cutting off other drivers, giving them the finger,
shooting across 4 lanes right before an exit. Why are you so sensitive to
this issue ? most normal people would find it of no consequence if an
unmarked patrol car drives by them. Only people that worry are the ones
that suddenly find it necessary to alter their behavior (out of concern
that they'll be caught)

Really Big,

I hope you like this "MINT" scanner. At that price, you`re going to
have it forever. Try a starting price of about HALF of what you asked for &
go from there. BTW, I have a "MINT" bridge for sale, if your interested.

The Pro-64 thinks a "zeroed out" channel is locked out, so yes, the channel WOULD be locked out. I've got a Pro-64 - I made many sets of frequency files. One to clear everything, and then others for different areas of the US.

What's cool about that is, is that if I know where I am going, I just plug in the scanner, run WLoad64 using the respective frequency file, and go. Very nice feature!

874. New Pro2006's

Newsgroup: rec.radio.scanner
Date: 1998-06-08 00:00:00 UTC
From: Lucas45@my-dejanews.com
Message-ID: <6lheq3oqq1@nnrp1.dejanews.com>
Source record: 158030

I just went to Radio Shack. I bought two brand new, still in the box Pro2006 scanners. The manager had them in the storage room. He said that he tucked them away four years ago because he thought that it was illegal to sell them after the law went into effect. He just recently learned that he could sell them. Since they were so old, he sold them to me for $240.00 each. I could only afford two of them. He has four of them left. I inquired about Pro43's but he said he sold the three that he had over on Saturday to one guy. I am just tickled about my scanners.

You are the worlds worst liar and this NG is living breathing ugly evidence of it each and every day. You need a hobby John. Let me suggest a few:

Bungee jumping - without the bungee.

Or hangliding - in the flight path of an international airport.

You could play chicken with semi's.

Perhaps a 500ft base jump with a backpack full of bowling balls.

Try shooting yourself out of a cannon pointed at a brick wall.

Take a bath with your toaster.

Become a crash test dummy - this has REAL potential, John...

Nitro-glycerin juggling.

Russian Roulette with a semi-auto.

How about gargling peanut butter?

I could go on and on, but I think you get the gist. Go find something else, more beneficial to yourself and others, to do.

Shut up John. If you so whole heartedly agree that this NG should be about scanning and not this constant Cheek/Mackey B.S. then start by dicussing scanning instead of acting like some kind of god-damned 3rd grade tattle tale!

Have you ever even bothered to think that if you just shut up everyone else would too? Jeez what a moron....

John, I am shocked and appalled. You used a foul word. And you borke your own truce - AGAIN!! Now your hypocrisy is complete:

" Lets ALL stop the flames & nasty comments IMMEDIATELY! Those who agree or disagree with this will demonstrate their TRUE intentions for this NG. CHEEK has backed off of his attacks so there is no reason to keep this up." -John Mackey, rec.radio.scanner, Sunday June 7, 1998.

You liar. Indeed you have demonstrated your true intentions for this NG. Well fine then, John. You aren't going to ruin it for me. Consider yourself on permanent ignore.

Oh, and I will encourage all others to do the same. Once no one responds to your petty whimpering, things should then return to normal. Enjoy the silence John. It's all you deserve.

Do you want to make John Mackey SO MAD that he goes away, never to return?

Do you want to watch him squirm and shout, writhing and whining in pure agony and despair, only to finally give up in disgust?

If so read on. I know one way to get rid of him for good that is completely fool-proof:

---------------> Ignore him.<----------------

Sounds simple, but it's not. It's SOOO tempting to let someone like him have it with both barrels. Hey, I too am guilty of perpetuating the madness. It's just that he's SO Goddamn ignorant.... anyway, I am taking action and doing my part to see to it that Mackey disappears for good. I am going to ignore every word he says. I will even set up my newsreader to hide all of his stupid messages. If we ALL do the same, he WILL go away. I guarantee it.

But we ALL must agree to and take this course of action. If there is even ONE person who responds to his crap, then it won't work.

ONCE YOU START, STICK TO IT GUYS! Ignore him no matter what he says or does - just ignore him. The attention he gets is what makes him stay. He obviously does not listen to reason. Once he doesn't get any more fun out of it, <POOF!> he'll be gone.

Anyway that's the plan folks. If we all stick to it, he'll go away. If we don't, he won't. It's up to each of you out there to do your part. If you don't, then you lump yourself into the same category as him. As of now, I am doing mine. Consider this my LAST off-topic post. So long and good riddance, John Mackey.

Hmmm... did anyone else notice the hotmail.com return address? Explains the ignorance of the author. T'wouldn't surprise me in the least to hear of $300 bucks+ being taken from all parties involved, with no scanner forthcoming...

Moron: MINT means no scratches, dings, dents, missing parts, etc. And the unit is hardly "very hard to obtain." My father in-law purchased his last year via mail order as a refurb - NO scratches, NO cracks, in the box with ALL of it's accessories INCLUDING A LEATHER CASE - for 90 bucks + shipping.

Truly this crook proves the theory that there truly is a sucker born every minute. I hope the idiot who buys that scanner likes bridges, 'cause I have one for sale....

-Phil

P.S. Did I mention that I'm parting with my Geo Metro for the measly sum of $13,500? It's in MINT condition with only 4 dents, 6 scratches and only 70,000+ miles.... ;-)

Go to any competent Uniden dealer and get a spare pack from them. I got mine for about $25 bucks. It's the same pack you'd get from RS and mine included the charger.

A hobby store that sells R/C cars will have just the ticket for a quick charger - they recharge R/C car packs in about 10-15 minutes. Splice in a suitable adapter for your scanner pack and you're all set - they even work off of a car cigarette lighter. A good one will also have a meter to let you know when the batteries are fully charged.

889. Traffic Signal Antenna

Newsgroup: rec.radio.scanner
Date: 1998-06-08 00:00:00 UTC
From: tweek@netcom-NO.SPAM-com
Message-ID: <Eu91FF.4nD@moraga.ness.com>
Source record: 158045
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Caught an odd sight this morning... twice. Riding into work this morning, I noticed at two separate intersection, a dipole antenna (two oposing horiz monopoles mounted on a junction box with a cable coming out ot the box) laying (maybe duct taped) on top of the signal head arms of one of the light posts.

[No, this was not a Ricochet Modem sort of setup]

This was in Pleasant Hill, Calif. along Taylor Blvd and the two intersections I noticed the antennas at were Taylor/Norse and Taylor/Ruth.

The antenna looked like it was just layed on the signal head, and was not in a horizontal or vertical orientation, but rather, the orientation was just that way because that's the way it layed on the signal arms.

The length of the antennas were about that which would be appropriate for VHF-hi use. Using the FCC database, I don't find any Pleasant Hill licenses for VHF (453, 460, 465 and 860 only).

I did not see any antennas at any additional PH signals which I passed after that this morning (Taylor/Willow Pass/CCB, CCB/Viking, CCB/Concord) but I have an odd feeling I might find a set at Taylor/Morello as well as at Taylor/Apollo. I'll check tommorrow morning, and if I do, that may be a clue as to what these are for... just recently, the four intersections (the two with the antennas and the two I suspect might have them) had vehicle sensors placed in the bicycle lane... I can assure you that these sensors don't do diddly as far as changing the signal when a bike crosses them... so I wonder what Big Bro might be up to.

Anyone with any other ideas what these might be for? I think I'm gonna try to mount my freq counter on my bike for tomorrow morning's commute. (if it's under 175 mhz, my counter should read it.)

WOOHOO!!!!! I borrowed some money from my father and bought the other four scanners. The manager was thankful and sold them to me for $200.00 each. He had no idea what they were worth. This has been a banner day in my life. Now I have a question. If I hold on to these until Congress passes this new legislation being considered, will I be able to sell these for considerably more than they are worth now?

>I just ordered the OS535, awaiting delivery, Does any one know of
anywebsite or Review or anything that talks about the installation of
the board?

I don't know about a review site but I installed the OS535 n my scanner a couple of years ago. I'll assume that the installation process hasn't changed in that time.... If you want to be all set to go when it arrives, make sure that you have a thin-tip soldering iron, solder (obviously) a nibbler, and if possible, a pair of leather or otherwise heavy-duty gloves. It takes some work to cut out the back neatly and the gloves will cushion your hand and protect your knuckles from some very sharp metal edges.

Before you do anything, read the instructions carefully, all the way through. The instructions could be better written and the directions more precise. They may have improved them--my instructions were photocopies--and crappy ones at that. If you're not paying attention, it's easy to screw it up.

Other than that, the job is pretty straightforward. The only tricky part is having to solder a very small wire to one of the legs on a chip. Again, that might have changed since I did mine--I can conceive of Opto putting one of those small clips on the end of the wire and doing away with having to solder.

Take it slow, and expect to spend close to two hours for a neat job.

I'm a complete klutz with a soldering iron and easily distracted when having to read many pages of detailed instructions but I got it right the first time I attempted it. If I can do it, anybody can.

895. attenuating cable

Das ist BOS (Beh�rden und Organisationen mit Sicherheitsaufgaben (Polizei, Feuerwehr, THW, Tettungsdienst etc.)) Technik.
Das sind eigene Kan�le mit einer ganz speziellen Technik, die von Aussen nicht zu
erreichen ist. Das ganze wird �ber das System der Feuerwehr laufen, da die auch
mit diesen Empf�ngern arbeitet und das THW meistens alamiert. Basteln bringt nichts und ist nur teuer. Son Pager kostet zwischen 600 und 1500DM, je nach Modell und Ausstatung. Ist aber auch 1000 mal zuverl�ssiger als alle anderen Pagersysteme.

I have seen something similar here in Hurst, TX and Wichita Falls, TX.
In both paces the antennas are 800 or 900 MHz yagis, and appear to be
pointed in the general direction of the city service center or city hall.
The antennas are mounted on a small (about 5 ft) mast attatched to the
main signal light post, not on the crossarm.
the one in Wichita Falls is vertically polarized and the ones in Hurst
are horizontal. The one near my house has the antenna on the traffic signal
pole across the street from the controller box (strange?).
I haven't figured out what they are used for. In Hurst, we have the opticom
strobe light system on emergency vehicles... I don't know if it has anything
to do with that.

Not one lie, Glennie--and even a pompous ass like you can add zero and zero. You have never posted a single on-topic message and neither has your little man friend Quackie. You two must be very happy together. Losers need all the support they can get and from what I can see you're both doing a wonderful job of cooperating in ruining this newsgroup. Again, I might add, or is that again and again? You both have been causing so much trouble for so long, it's hard to recall.

You have a lot of gall for a known LIAR. You re-started this crap without any provocation and we all know it. Please commit suicide so we can get on with our scanning discussions.

I have a Yupi MVT-8000 that took a voltage surge. I would like to get it to an authorized service station for an estimate for repair. Anyone know of any such firm?

I really like the unit and if it can't be repaired I'd replace it.

Can anyone help out?

Thanks.
Gordon

That's all well and good.....but it really
has to start with YOU. Your very posting of
the above gives your tacit approval of what's
going on.

If you don't like the goings-on, don't read them.
Do you read the newspaper from front to back every
day? Every word?

There's not a lot of difference betwixt the newspaper
and the newsgroups. Read what you want, and don't
read what you don't want.

THAT is as good as it gets....

Lemme tell you a little story about this Queerstrom
dude. You're right....he never posts on topic. Probably
because he doesn't know anything about scanners and
scanning....but I digress..... on to the story:

It was about three years ago over on FidoNet
about the time I sent Mackey flying through the
air with the greatest of ease with a Size 13EE
imprint crosswise on his sorry patooty, that good ol'
Queenstrom showed up.

Not only did he show up, but the damned fool launched
an all out attack on me because I recommended TV antennas
for "scanner beams". Queenstrom huffed and puffed
and puckered up and blew me everything but kisses over
the "foolish idea of using a TV antenna as a scanner beam".

(The nerve of me!)

He kept it up and up and up....until I warned him I'd
have to give him his sailing orders like Mackey, if he
didn't cease and desist.

I guess since then, he's done found out how well TV
antennas do work as wideband beams because he sure
doesn't whisper a peep about it anymore.

But obviously, he's still in the attack mode....
Next to Smacksie and PjB, ol' Queertrom is about
as low as they come. Which is why he's on my Twit
List in good company with his "bretheren". Joined
at the hip with 'em is more likely, but..anyway, that's
the story about ol' Queenie. That and him being about
as useful as hips on a snake are all a body needs to
know about 'im.

He's worthless, no two ways about it. But he seems
to fancy himself as some sort of a great savior.....

We've seen a few of those, eh?

Drats!

But I've seen that protocol manual and it sure does
lend "hope" that other discoveries might be made.

But the PRO-64/PRO-2041 may have been "feet wetters"
for GRE to where they gave it a limited command set.

One only wonders why Radio Shack pulled these scanners
so quickly....not even a year on the shelves.... but
maybe full blown models are coming?

We can hope. August is when the new RS Catalog comes
out, so the new stuff should be announced by then.

Cheek & I were discussing the deal. He stopped responding. I told
him the terms & that if HE would stop then I would stop (regarding the
flames nasty messages). It worked great for about 3 or 4 weeks, then
CHEEK started up again!

Perhaps you should put blame where blame is due. oh I forgot, you could
NEVER do that with your little hero CHEEK because it would SHATTER
your image of him.

> Please join us in stopping the flames. (

I have a deal ALL who have wanted to cause problems here. Lets
ALL stop the flames & nasty comments IMMEDIATELY! Those who agree
or disagree with this will demonstrate their TRUE intentions for this
NG. CHEEK has backed off of his attacks so there is no reason to
keep this up.

Bill Cheek wrote:
> That's all well and good.....but it really
> has to start with YOU.

Acutally Bill it would have to start with YOU. This NG was fine & quite until YOU started flaming a couple weeks ago because someone stated an opinion contrary to YOURS. We had a deal of NO FLAMES, NO ATTACKS, which YOU VIOLATED.

If you would like to start over again then I would support such a plan. NO ATTACKS, NO FLAMES, NO NASTY COMMENTS on this newsgroup of rec.radio.scanner. I invite YOU & YOUR trouble making supports like MAlexander, allsafe, pja, John Arthur, & a few others to join us in this plan. Support & participation in this would demonstrate your intentions to redeem yourself to the NG & to make this a nice place to the adult discussions of scanners.

> THAT is as good as it gets....

I can only qoute your fine words & say back to YOU,
"THAT is as good as it gets...."!

I do hope that YOU, BILL CHEEK, & the other posters in the flame war will agree to this. Not agreeing will demonstrate your desire to continue the flames & making more problems on this newsgroup.

Bill - you may respond to me privately if you like, but I would encourage you to respond publically. If you respond privately, I will be forward your UN-EDITED RESPONSE (with all headers) to the rec.radio.scanner newsgroup for purposes of public inspection of your response & to make it a matter of public record via the dejanews service.

If we are going to behave like grown-ups John, does this include you? I count 17 posts from you today and they are all off topic and flames. I think everyone is ready to drop this whole thing, but it has to come from you first.

This used to be a very informative newsgroup, lets see if we can return to a little civility and help each other on topic, the topic being scanners.

Thanks,
Mike

I forgot to add to my list of Quack Mack's nefarious activities, his penchant for resorting to vulgarities when at a loss for words. Electronic stalking, personal vendettas, impersonations, lies, flames, forgeries, cancellations, and the regular use of vulgarities.

Can you help me out people? I believe that I may have missed a few items. The list has gotten so long that it is sometimes difficult to remember this PARG thug's underhanded methods.

Hello All

Im posting a log for this weekend North and South Atlantic
Airspace.
Many Selcal Info included.
Interesting to refer is the strong tail winds traffic eastbound
had (Saturday's night, North Atlantic).

If you want to see how the airspace looked like you can download:
http://www.geocities.com/SiliconValley/Lakes/9420/shotex2.gif
for North Atlantic

http://www.geocities.com/SiliconValley/Lakes/9420/shotex3.gif
for South Atlantic

Hope you enjoy them.

North Atlantic:

949. Pager des THW

Newsgroup: rec.radio.scanner
Date: 1998-06-08 00:00:00 UTC
From: Bastian Hönscheid <a2809982@smail1.rrz.Uni-Koeln.DE>
Message-ID: <6lgkr1$p0@news.rrz.Uni-Koeln.DE>
Source record: 158105
Cross-posted to: de.alt.radio-scanner,de.comm.mobil.pager,rec.radio.scanner

Ein Freund von mir hat -im Rahmen seiner Verpflichtung beim
Katastrophenschutz des Technischen Hilfswerks Rhein-Sieg- vom THW einen
"Piepser" zur Notfall-Alarmierung bekommen.

Seine Frage ist jetzt: kann man ein solches Geri¿½t auch als Privatperson
(i¿½ber irgendeinen Funkdienst, z.B. i¿½hnlich wie Europiepser) anfunken.
Dann wi¿½re eine private Nutzung, i¿½hnlich wie Scall oder Quix mi¿½glich.

Kennt jemand die Technik, die beim THW verwendet wird?
Das Geri¿½t ist ein kleines schwarzes Ki¿½stchen, bietet Text- und
Tonempfang. Hinten beschriftet ist es mit: "THW SU" und der
zweistelligen Piepsernummer, dann "BZT A118 768F EU".

Weii¿½ jemand was ni¿½heres hieri¿½ber? Antwort wi¿½re nett!

Gruï¿½,

Bastian

>Acutally Bill it would have to start with YOU. This NG was fine &
>quite until YOU started flaming a couple weeks ago because someone
>stated an opinion contrary to YOURS.

Oh, Cheek's flaming someone is you rational for resuming your personal vendetta and in the process disrupting this newsgroup. That explains your 80 off-topic postings and flames in the past week.

>We had a deal of NO FLAMES,
>NO ATTACKS, which YOU VIOLATED

No, you violated it with your threat to "take him to the woodshed again" and similarly provoking comments.

> I invite YOU & YOUR trouble making supports like
>MAlexander, allsafe, pja, John Arthur, & a few others to join us in
>this plan.

As everyone repeatedly tells you Quackie. If you want people to stop flaming you, then shut your pie hole and stick to the subject at hand. That is something that you have never done and have always refused to do.

>Support & participation in this would demonstrate your
>intentions to redeem yourself to the NG & to make this a nice
>place to the adult discussions of scanners.

Support and participation in this would demonstrated blah, blah, blah. You're calling for **others** to moderate their postings.... Why not start with yourself? Why not do yourself what you want everyone else to do? I notice that you aren't declaring, "I John Mackey will stop flaming, posting off-topics messages, engaging in ersonal vendettas and so on and everyone who wishes to do the same should follow my lead." Nope, as always, you're telling everyone else what they ought to do.

>Not agreeing will demonstrate
>your desire to continue the flames & making more problems
>on this newsgroup.

Not doing yourself what you want everyone else to do will demonstrate your desire to continue the flames and make more problems in this newsgroup.

The challenge is there for you going to do as you say. If youdon't post another off-topic message, I won't respond to it. Pretty simple, eh?

<petesmith@mindless.com> wrote:

> How about calling up the dispatch office, and requesting they change
> frequencies? That'd solve the problem right quick!

I may have been really lucky and found an even easier fix.

First, I re-examined the cable and found a section that had a short slit in
the rubber (plastic?) coating. I wrapped that section in electrical tape.
Then I traced the route of the cable and made sure I kept it separate as
much as possible from the vehicle's antenna cable.

So in theory, I now I have a mobile antenna that is pretty well insulated
from the vehicle's electrical system. And the interference on 46.14 is
gone. It still exists to a lesser degree on a couple of other frequencies,
but the primary goal of getting it off the fire/emergency dispatch channel
is achieved.

There have been some great suggestions in responses, I may yet be able to
make the situation better. The interference does still exist when I power
the scanner from the vehicle, so maybe I can eliminate that too if I keep
after it..

Thanks to all for thoughts and suggestions...yes, even Pete! ;-)

- Dave

I don't know each channel, but they are in the 902-928 MHz range (also the 33cm ham band - where cordless phones don't belong!). Each type/make of phone has different frqs.

Hallo,
vielleicht sollte man sich als Helfer mal informieren, was und wie dort
ï¿½berhaupt alarmiert wird, wenn man so ein "ding" gekommt, oder?
Wenn es ein BOS-Empfï¿½nger ist (Digitaler Alarmempfï¿½nger - beim THW?)
dann klares NEIN.
Vielleicht ist es aber auch ein "normaler" Cityruf oder Quiy oder so ???
Kann alles sein. Ihr solltet euch mal beim THW schlaufragen.

I have an antenna mounted to the side of my house on an
aluminum mast. When I plug it in too my scanner I can't pick
up anything even the weather frequency. When I put on the
antenna that came with my scanner I can pick up everything
so I not it isn't a scanner problem. Could I be getting
interfernce from the aluminum? Please help.

This story has the smell of "urban legend in the making" on it but they only way anyone will find out for sure if the buyer decides to sell some of those long-lost scanners.

In a similar instance, I bought two new 2006s a couple of years ago through rec.radio.scanner. Guy bought a couple of hundred (I believe it was at a government auction but I'm not sure). I paid $300-$325 for them. I'm sure that I wasn't the only one to grab one or two.

Sounds more like a short between the center conductor and the ground
(outer shield). You may try a new hunk of coax to start with. I
personally recommend the RG6 for it's price to performance ratio. Good
luck.

In my area there is a sensor that detects the strobe light on the front
of Fire and Ambulance vehicles and turns all lights red. It used to
turn them green in your direction - until some clever dicks put strobe
lights in the front windows of their cars.

Cheers!

Have you checked your coax to the antenna to make sure that
it is not open or shorted? That sounds like what may be the
problem. If you are unsure how, drop a note here or to
me direct.

Actually they live between 869.010 and 896.1125 (repeaters - mobiles 45MHz lower)

Dual conversion scanners will pick up some of the range if you search between 896.1125 and 912.0000. Triple conversion units like the BC895 and 235 can't do this - however, mine picks up nearby cell phones in the VHF-lo band. Really stinks when you wanna hear the CHP and get "Should I pick up one loaf of bread or two...?" instead. Stupid cell phones!! (stupid scanner, really)

>about this.

You ain't gonna believe this... those antennas are so the signal
controllers can get the time. At least that's the story given to
me by Da Man over in Pleasant Hill Public Works. (I did tell him
what I imagined they were for and heard a hushed snicker on the other
end of the line.)

When I asked if they listen to WWV, the response was "Yeah, the system
is called WWV, that's what it is." I couldn't really find out if all
signal controllers have their own receiver (with less conspicious
antennas) or if these are the main receivers and they use the signal
communications lines to let the other signal controllers know the
proper time.

985. Re: headphones

Newsgroup: rec.radio.scanner
Date: 1998-06-09 00:00:00 UTC
From: Dale Klotz <not@available.net>
Message-ID: <6lkimraim1@suriname.it.earthlink.net>
Source record: 157889

Radio Shack has one for $1.99, it's black, just like the secret service wears. It's not as efficient
(volume level) as one I have from a Sony travel alarm radio. That may be due to the impedance which
I suspect is higher than the Sony one.

Hmmmm.... I did the same thing on my 895 and the test stayed on until I
turned it off and back on... which scanner is it??

About the only thing I could suggest would be a total reset of the
scanner (manual+2+9 and turn on) but you'll need to reprogram the
scanner...

Listen to the control tower of the airport if you want to hear the flight control communications. You can also scan the frequencies for the Secret Service on VHF, but they often use digital encryption. Try listening to 165.375 MHz. You might get lucky and hear something in the clear. Also try listening to the local police department's "special" channels. The Secret Service tries very hard to keep most of its sensitive communications private. Since you are close to the airport try listening to airport security frequencies also.

Good Luck

>
>Clear to me!

Hey, I just work as a mechanic at the public works garage for a big city.
I drive the patrol cars (marked and unmarked), but I have no desire to be
a cop. But I want to ask you and all the rest of these people who promote
lawless behavior on the roadways, how would you feel if your friends or
loved ones were the victim of an "agressive driver" causing a fatal and
crippling accident ?

My brother in law driving a Jeep Cherokee, was hit by some asshole who
thought obeying the posted speed limit in the right lane was keeping him
from exiting a little too late. Result ? 3 car accident, from the asshole
tailgating him, bumping him, causing him to spin out into the car next
to him. Net total 2 fatalities (unbelted driver being ejected from one
vehicle), my brother in law spinning out into a phone pole and being
asphyxiated from the crushed metal around him....

So do I have a problem with "agressive drivers" who think they're entitled
to disregard the rights of law abiding motorists obeying posted speed limits
and exercising common courtesy ? your DAMN right I do !

Old saying, never a cop around when you want one. If a marked unit, or even a conspicous "un" marked unit was around, 2 people would still be alive right now.

Who the hell said I promote lawless behavior?

I merely pointed out, that your post make you seem like one of
the guys that hangs out with his scanner, his old 82 Caprice, and
tries to go out and get a woody by impersonating a Police Officer.

Just my impression.

1015. FS:Icom IC-PCR1000 Computer Controlled Receiver

Newsgroup: rec.radio.scanner
Date: 1998-06-09 00:00:00 UTC

I have for sale an Icom IC-PCR1000 computer controlled receiver. Covers from 150 KHz to 1300 MHz all mode. Radio is approx 3 months old and in mint condition. Was purchased from Lentini Communications in Newington Ct. Includes box, manual, and all accessories including software. I have used the radio with a 486/DX4-75 MHz IBM ThinkPad sub-notebook, a 486/DX4-100 desktop, and a Pentium 200 Desktop with great success. Will include disks of third party software which the buyer will use at his/her own risk!!! For those unfamiliar with this radio, information for it is available at the URL below:

http://www.icomamerica.com/featured/

Reason for selling: I love the radio but am more geared to VHF/UHF/800 conventional and trunked monitoring. Decided I'd try to sell this when I caught wind of the Optoelectronics Optocom.

Price: $400.00 non-negotiable, plus shipping. This radio is just about brand new, folks, and in mint shape, so I figure $100 off the new price is a pretty good deal.

Method of payment: Pre-pay with POSTAL money order only! Or, I will ship COD Cash/Postal Money Order only. In either case, you pay all applicable shipping charges.

Please reply to the E-mail address below only. Do not post replies to the newsgroups! Thanks for reading.

I ordered a scanner from MULTICOMM, because they had the best price and shipping method. The scanner arrived in less than 10 days . As a side note I would highly recommend the YUPITERU soft case for their hand held units.....very well made and it provides total protection of the unit.

Hi,

I just bought a second handed scanner the ICOM IC-R100.
It's a great scanner allthough i'm missing the manual.
I need some help to scan a certain frequency, does somebody know how this scanner has to be programmed for running between 2 freguenties.
for example between 30.000 and 40.000. Any help is appreciated.
please mail me to yvonowee@hotmail.com

p.s. if someone has the manual in a txt file or doc it would be terrific when you send me a copy

best regrads, Yvonne

Well your impression is wrong. Have somone in your immediate family
killed by a jerk who thinks everyone has to get out of his way just
because he happens to be in a hurry. And then come back and report
how you feel about having cops on the road to enforce laws, or alter
the behavior of reckless drivers by just being present to deter
discourteous driving.

Oh, and for the record I drive a trick 84 Buick Regal. No cop cars.
I was telling you my observation of driver behavior when I drive
the unmarked cars from the DPW garage on road tests. Despite the
fact I look like an outlaw biker, people see the K-55 and back off.

G'day, we have had for a number of years VHF Hi-Band (150-174Mhz)
antennae fastened to many traffic lights here in my area in Sydney NSW.
These are mainly 1/2 wave Ground-Independant antenna (Whip with a
loading coil and cable straight from the base.) and have been used for
traffic flow monitoring.
Transponders (Low powered fixed frequency, Data units) have been fitted
to many vehicles participating in traffic flow trials. Thes units
transmit a constant ID that is picked up by the receivers that are
conected to the antenna's, these are generally located in the light
controller boxes, and the data is then sent down a dedicated leased line
to a central location for recording.
It is only used to check trends in traffic flow when new light phasing
is trialled or lane markings changed and different weather conditions.
The ones you are talking about could also do the same either for bikes
or motor vehicles to show times taken to pass through all the
intersections you mentioned.
Regards,
Sam

>

To add detail, the system picks a working channel & reverts it to conventional repeater operation. Unless the system is huge (in which case there may be more than one channel in operation, with each failsoft channel assigned to a big subfleet), all units revert to this channel & it runs like a conventional repeater system. Ususally there is a warning beep on the audio so users know everybody can hear everybody else in this mode.

I'm gonna attempt to respond to several posts at once...

From: Tom <tomc61X@sprintmail.com>
>
>I have seen something similar here in Hurst, TX and Wichita Falls, TX.
>In both paces the antennas are 800 or 900 MHz yagis, and appear to be
>pointed in the general direction of the city service center or city hall.

These aren't Yagi's. I don't even suspect that they are true dipoles.
They look more like a cheap version of a diversity antenna. They are
not aimed at any specific location. Not that they need to be, since
both of these are within a block of the Police Station and Public Works.

From: Tom <tomc61X@sprintmail.com>
>
>The antennas are mounted on a small (about 5 ft) mast attatched to the
>main signal light post, not on the crossarm.

These aren't on a mast. They are bolted to a top arm of the light standard
which has two or three signal heads attached as well. The antenna box is
attached with a strap similar to a hose clamp.

From: Tom <tomc61X@sprintmail.com>
>
>I haven't figured out what they are used for. In Hurst, we have the opticom
>strobe light system on emergency vehicles... I don't know if it has anything
>to do with that.

We use Opticom out this way too, and since the fire department (main Opticom
user) is county wide, it wouldn't make sense for PH to use anything else.

From: zoomr@skypoint.com
>
>Many areas are putting up cameras to watch intersections. You might
>look to see if there is any camera visible, though many are so small
>that it wouldn't be noticible.

Really the wrong frequency... the antenna looks too large for 150 mhz,
but too small for 46 mhz... definately not UHF, so it wouldn't be live
video... could be digitalized video sent as data, but they'd get a better
view from Police radio tower nearly across the street.

From: Nicholas McLarty <nickm@texas.net>
>
>Many areas are now beginning to install a traffic monitoring system which
>consists of sensors embedded in the road which detect the speed of the

>traffic flow through that location. The data from these sensors are then
>sent through those antennas to a central receiving point. You're
>probably looking at the transmitter for such setups.

That's something I considered, being that these two signals are two of four which recently had bicycle loop detectors addes in the bike lane, intersections where I've never had problems getting through on a bike, unlike the intersection before and after the four modified intersections, thus I considered that they might be for counting bicycle usage.

Passing through again today, only two of the four bike sensor intersections have the antenna. My freq counter didn't even burp away from the 22 (+/- 5) Mhz garbage it was picking up from whatever... never locked on to anything.

From: Phil Smalley <Ziggy7445@yahoo.com>
>
>I wonder if they are used to remotely control the lights?? If so, one
>could have some fun if you had a low power transmitter and a
>computer...;-)
>
>I'll have to look around my area for such a setup....

I think this might be it... being that the antennas almost rest on other metal parts of the signal post, it really would raise hell with the SWR if one tried transmitting on those antennas. I suspect that they are receive only.

These two intersections are on either side of an uncontrolled intersection which is the main egress from the Police Department, Public Works, Parks Department and the Community Center. I suspect that in such cases where there is a large gathering getting over at the community center, or if the cops want to get on the road quickly, etc, someone somewhere sends the signal and the lights at the intersections on either side of of the Civic intersection turn red, allowing unimpeded egress from Civic Drive.

I've got to call the City of Pleasant Hill today to report a busted signal (no bike lane sensor, bike doesn't trip vehicle lane sensor, and last week the "push to cross" pedestrian button stopped working) and another intersection which has a 1 second yellow, so I'll see what I can find out about this.

I live in Maryland, just below Gettysburg, and one time I heard a dispatcher sending police to a house where a break-in was in progress.

There was a woman who had heard someone enter, and she holed up in the bathroom with the phone. The dispatcher passed descriptions on to the cops who were on route - "she hears them breaking in the bedroom","they're banging on the bathroom door", etc. while the cops radioed back "we're at the house", "we hear her screaming", etc. The cops did get there in time.

The funniest thing to happen was late one night, we heard a neighbor's mailbox get bashed. I went down and looked at ours, but it was okay - then I hear another bashing, and a car HEADED MY DIRECTION. I hid behind a tree, got the plates and called them in, then listened to the cops catch the kids. As they were bringing them back to us to be ID'ed, we heard they were en route, and were ready to meet the cop when he pulled up. TOO FUNNY!!!

What we need to do is at the next national Hamfest is get both sides there issue them Baseball bats and let them go at it. Then we tie the winners hands into a 10,000 watt amplifier and shoot DX. Under the circumstances I'm sure we could get a special permit from the FCC, who would probably send a representative to see that we did it properly. It must be a terrible waste of a human life to fight over a ham frequency.

WhoDaMan@webtv.net wrote:

> Why does Allsafe crack on me because I use WebTV?

And it occurs to me to add the following:

WhoDaMan@webtv.net wrote:

>> I have a better idea. Let's behave like grown-ups and
>> discuss scanners.

And then "allsafe" <allsafe@netwit.com> replied:

> Duh........I dunno; has that been suggested before? If so; has it
> worked?

> Oh what a tangled web we weave; when first we pontificate on webTV!

Given the fact that YOU went off-topic and clearly
used a bogus identity, it certainly seems that YOU
invited comments. "Allsafe's" first comment is
certainly right on the money. Comments like yours
come in all the time and they NEVER "work".

His second comment was not a flame nearly as much
as a simple observation that you're hiding behind the
safety and security of your WebTV.

And you most certainly DID "pontificate" and you ARE
hiding behind WebTV. Duh.......

What's the problem?

WhoDaMan@webtv.net wrote:

> Why does Allsafe crack on me because I use WebTV?

Did you use the safety and security of WebTV to
take a pot shot at someone? See, certain Internet
services like AOL and WebTV make it real easy to
hide behind a nomme de plume or a bogus I.D. That's
one thing, but to use it to take pot shots at
others is kind of a low-life thing to do.

> Am I lesser a person because I don't have an expensive
> computer with which to surf the web?

Depends on how you use it, I guess. If you'd use
your real name so folks would have some idea of who
you are and where you're at, then your "tools" wouldn't
be all that noticeable.

> If you cut me, will I not bleed?

Not from behind the safety of your WebTV......

> In other words, Fuck You Allsafe.

Ahhhhhh yes, it's real easy to say things like that when
no one knows who you are or where you're at.

> Geez, I can't believe you guys managed to drag me into a flame war.

They must possess some power over you, even with
your anonymity.

> Ordinarily I'm opposed to these.

But not this time?

> Oh well, I'm in it now. Let's combine
> all of our negative energy and direct it towards Allsafe. Come on
> sissyfag, bring it on.

Let's *don't* do that. What say?

Here is all the info you requested in this html you'll need to fill in
the gap channels at 128KHz intervals, notice that the hanset tx and rx
frequencies will be the reverse of these listed.

Mike
WB8VLC

Some info from our web page goto
http://design-net.sps.mot.com/solutions/wireless/cordless/apps/49-other.html
click on > Reference Designs at the top left and cursor down to:
Yosemite 900 MHz analog platform
and select > II. Design factors.

Here is a condensed version of what you should see.

Reference Designs: Yosemite 900 MHz Analog

☐A Frequency Division Duplex (FDD) method eliminates the need for
complex framing circuitry and the inherent time delay in the voice path.
In Time Division Duplex (TDD) systems, this annoying sidetone round-trip
delay significantly degrades the voice quality. Although a DSP can be
used for echo cancellation if the round trip delay exceeds acceptable
levels (on the order of 4 to 6ms), the higher cost of this solution
guided our choice of a FDD system which does not need a DSP.

☐Two 5 MHz frequency blocks within the 902-928 MHz ISM band (around 904
MHz and 926 MHz) are employed for the receive and transmit signals.
Ceramic filters are used to create the duplex filter. Staying on the
sides of the ISM band also helps to avoid interference from higher-power
applications like wireless speakers or vehicle identification systems,
which are typically centered in the middle of the band.

☐A frequency plan for 40 channels equally-spaced at 128 kHz is shown
here:

Channel#> 1 2 3 38
39 40
Tx frequency (MHz)902.144 902.272 902.400.....906.880 907.008
907.136
Rx frequency (MHz)922.880 923.008 923.136.....927.616 927.744
927.872

I agree with Kermit. I used to work in the L.A. area as a courier about 5 years ago so I have seen more than my share of ignorant dumbass drivers who must have gotten their licenses out of a Cracker Jacks box. Even now that I have a "real job" I still spend 3-4 hours on these freeways a day, and if anything, the people are worse now then they were back then. People don't have a friggin' clue. Just this morning, I had some dumb woman damn near plow into me at 80 miles an hour or more. As she zoomed past me, I saw the reason for her apparent lack of concentration - she was applying her lipstick.

These morons are out of control. I am all for as many people as possible going out and buying up old police cruisers and making them look like unmarked cars. I love to follow marked and unmarked cars when I am on my way to work - all of a sudden people act as if they were taking their driving tests again. It's great. I say drive those cars as often as you can, Kermit. You probably save a life every time you do.

Resistors are not polarized so it doesn't matter which way the 100K resistor goes. The 741 (and all IC's) will have a small dot beside pin 1 and then the pins go in order down that side of the chip and then around the bottom and back up the other side:

```
___
1 |* | 8
2 | | 7
3 | | 6
4 |__| 5
```

If it doesn't have a dot it will have a notch at one end and looking at the chip with the notch at the top, pin 1 will be the top pin on the left. Good luck.

> Cordless phones are boring, cell phones are much more interesting to
> listen too, so I've been told :)

I have monitored cell and can tell you that, for the most part, it's great for insomnia and not a whole lot else. Every once in a while though, you get some good stuff like a drug deal, or phone sex addicts, or best of all, the dreaded cell phone breakup. You know, the poor schmoe who calls his girlfriend on his cell phone and gets an earful of hate and scorn for two and a half hours - all at 25 to 45 cents a minute??? HA HA HA HA!!!! Those are classic, but I haven't heard one like that in years.

Cordless, on the other hand, is fun because you usually know who is on the phone, especially in apartment complexes. People who use cordless phones act less concerned about being monitored and say more interesting stuff because, unlike cell users, they aren't out in public at the time. The "phone breakup" as I call it, is a much more common occurance here. God, its' some funny stuff..... Once a neighbor of ours was using her phone and went outside with it. I had a window open and she heard the scanner - she told the caller on the line that she was hearing an "echo". I turned the scanner down and she said "Hmm! It's gone now. I wonder what that was?". Hee hee, if she only knew...

-Phil

P.S. Ever listen in on someone calling their psychic? That's great stuff...My question is, if they're so damned psychic, why can't they call you? Oh well..;-)

I just called the regional office and found out that I can get a refund
of $30 on one I bought on 5-9-98 That is 30 days......jerr1919

1057. Pro 90 Battery

Newsgroup: rec.radio.scanner
Date: 1998-06-09 00:00:00 UTC
From: "L.Peters" <fires@cjnetworks.com>
Message-ID: <357CE3C2.3637@cjnetworks.com>
Source record: 157983

I just called R.S. to price an additional battery pack for my Pro 90 and was told that it would cost $59.95. I was surprised when I first bought the 90 that it didn't have a separate power and charge plug in. And I was a little upset that I couldn't use regular NiCads in it. Now that I have been told the price for a spare batt. pack I'm P.Oed.We have the strong possibility of bad storms in the area this P.M. and I have a dead battery.Does anyone know of a cheaper after-market battery. Also is there a quick charger available.

Yuck! That's almost as bad as the BC2500XLT - one global delay
setting, so either waste time on trunk systems or miss callbacks
on conventional channels.

So WX, ATIS, MDT, etc. channels have to be locked out manually;
Annoying, but I guess you get used to it...

At least the firmware locks out zeroed channels. It would be a
pain to go find them all.

...Andy

I am looking for some relatively cheap headphones, like bud type for using with my scanner. I want something like the secret service wear, just one ear. I looked around on the web for some, and at some stores with no luck. Any help would be greatly appreciated.

If you don't sell them before the law passes, you might not be able to
advertize them in any open forum without risk of arrest, according to some
accounts of the wording in the bill. Who knows which version the Senate might
pass.
Odd that these 6 brand new scanners could have been written off (6 times
$400 is $2400 in inventory unaccounted for during inventories every 6 months in
```

that Radio Shack store since 1994). Odd too that any Radio Shack store could have gotten 6 $400 scanners in stock at one time. Nobody in the Radio Shack organization ever checked the computer inventory in all those years looking for 2006's to find those in stock at that store when they could be bought for $29.95 (or some such low price) at some point between 1994 and now. The discontinued stuff "devalues" automatically every month or two you know. I have a friend who still works at RS do a search and found a 2035 at $99 (in February) and this was an amazing find. Many employees know how to do this type serach. Also, how is this manager is going to explain your $1040 in his cash register with no listed inventory sold? How is he going to explain sitting on the scanners for 4 years? He'd be awfully busy explaining how he soldered in enough phone batteries to get $1040 for one day's "miscellaneous income". Any trained RS manager knows if he took $1040 cash from you under the table there's a good chance that you were a company security person testing him. Either way, he's risking his job & reference or jail for your $1040.
By the way, were those sitting in the back room next to the World War II unused Jeeps still in the crates? Or were they behind Jimmy Hoffa's coffin?

Anything that has been out of the box is not "100% new" or "mint".
The cell modded scanner can't by any measure be considered 100% new.

Source record: 157989

A DoD investigator I know told me of a case he worked some years ago. Seems someone was stealing paper out of the "paper only" dumpster at a particular Army installation. He set up a "remote observation post" in a dumpster across the street and managed to photograph the bad guys in action. The charge? Espionage? Treason? Nope. Theft. The company that owned the dumpster made money recycling that paper, and anything placed in the dumpster became their property.

Go figure.

I am looking for a spectrum display unit which, when connected to a receiver and oscilloscope, can provide a spectrum display of a received signal.

If you have the "Spectra-Display" unit from GTI Electronics, or a similar unit with the same capability for sale, at a reasonable price, please let me know. I mistakenly passed up on the GTI unit which someone sold for $75 a few months ago because I did not understand what is actually does. Thanks!

> work fine by me.

Of course! I'd never have posted the procedure if
I hadn't had it worked out to a gnat's whisker.

Ironic, though, just last night, i had a pesky PRO-2006
on the bench with an odd problem of VHF & UHF-Lo being
right on track. But UHF-hi was 5 kHz off. The VCO's
were set right. So I checked the TCXO....and it was
close, not that it would have caused the above issue....
but since I was there, I MADE a "proper" tool out of a
thin fiberglass rod.

....and compared it to two other tools, one the jewelers
screwdriver I originally recommended, and the other, a
plastic wand with a head that fits so-so. Insertion of
ANY of the three made absolutely no difference in the
output. Which is to be expected.....understanding that
particular TCXO where all the "live" stuff is below the
grounded adjustment head.

Nah, this issue isn't one of "taking sides" anyway. It's
an issue of what can work with minimal chance of error for
the grass-roots hobbyist.....which happens to be my forte`,
translating high technology to layman's level.

In this case, Mackey knows enough to be dangerous, and uses that limited minuscule thimbleful to attack me. Hell, he doesn't have a clue to the TCXO we're talking about anyway. He shoots from the hip and wonder's why his foot has a hole in it.

Anyway.....it is pretty slick to zero-beat that TCXO with WWV at 10 MHz. EASY to get within a hertz or so....for all of five minutes with most of that for setup and restore.

Back to the issue I had last night.....anything come to mind right off as to what could cause 800 MHz to be 5 kHz off and the rest of the scanner pretty much right on? Doesn't make much sense to me right off.....but that's how the apples rolled anyway.

Many areas are putting up cameras to watch intersections. You might look to see if there is any camera visible, though many are so small that it wouldn't be noticible.

I guess so. But it is annoying enough that I am
thinking about connecting the CE-232 Interface to
it for that very purpose of catching all the
individual Delays and LockOuts....

I'd do it in a heartbeat but for the 45-sec it takes
to AutoLoad 400 freqs the TxD way and 8-mins by
the CE-232's keypress emulation.

> At least the firmware locks out zeroed channels. It would be a
> pain to go find them all.

I suppose. The scanner does have a LockOut Review that's
handy once you do have a bunch of lockouts set.

Small gratuity, I guess.

Many areas are now beginning to install a traffic monitoring system which consists of sensors embedded in the road which detect the speed of the traffic flow through that location. The data from these sensors are then sent through those antennas to a central receiving point. You're probably looking at the transmitter for such setups.

Take it back and get the Uniden BC235XLT. The Pro 90 is made by
Uniden for Radio Shack and is the EXACT SAME RADIO. When you buy the
Uniden, you get an extra battery pack and can usually find one for about
$230 new.

Sounds like you need to take it back to Rat-Shack. Better yet, take it back
and get the Uniden version, you get more for your $$$.

Try taking your battery pack to your local hobby store (might wanna
call first). Odds are they can solder one together for you for under 20
bucks....with higher capacity Ni-cads to boot.

Me, too. I checked with an etymologist who stated
that "Emilio Goldstein" in an obscure combinatorial
derivative of Yiddish and Farsi......

> I have also heard people say that ignoring them never works.

Nah, it usually doesn't.

> Anyone who says that has never tried to ignore these losers.

You know I have. I've ignored Smacksie and Queenstrom
for weeks on end, and they still try.....and it is easy
to ignore them on account of their wretched ignorance.

> I have personally seen
> the effects of an entire discussion group ignoring trolls. Some jerk
> posts an obvious troll, and the whole group acts as if it never
> happened. No replies, no "God that was stupid", nothing. The message
> expires and the loser moves on. It's that simple. Try it and see.

Yeah, but that's different. A troll from an unknown is
easy to pass off. And the unknown certainly goes looking
for better pickings somewhere else. But take Smacksie
and Queenstrom....they ain't going away. But then
Smacksie is just plumb stupid and Queenie is such the
epitome of truth-telling. Betwixt Queenie and Smacksie,
they've called more people "liars" than any fifty others
down through the course of history.

But I digress..... I don't know if Emilio will ever go
away because if people ignore him, he'll just reincarnate
as Smacksie......

Besides, those popinjays are fun. It's EASY to get a rise
out of them. Just poke 'em in the poopy a little and watch

'em dance, sing, whine, snivel, and call people "liars".
I fondly refer to these popinjays as "our mascots"......

But yeah, you're right about the unknowns.

> My 2 Cents,

I hear that this BCT-7 is supposed to be a great scanner... My question is what is so wonderful about this one?

Please when replying, reply via e-mail too, as I don't frequent this NG often..

thanks...

-Chuck

First, all scanners since 1994 made or imported legally here have the cell frequencies blocked. All scanners since August 1997 have firmware blockings of cell frqs, so they cannot be modified at all.

Second, listening to both cordless and cellular conversations is illegal. I know you're cool, though.

I bought a Pro-64 for $150 at Radio Shack. Great scanner - it has frequency sort, a pc interface, triple conversion (sometimes though a bad thing :), and auto frequency loading (useful for something like loading all active amateur repeaters into a bank).

Hope this helps.

Brad - that's the spirit!!

Be brave & pursue, "politically correct" is NOT always correct.
Infact, often times it is not! Don't be intimidated by others
who will try to sway you, venture forward with the spirit
of thought that inspired you to act in the first place and
continue forth until victory is in our hands! That is the
basis of America, that is what has maintained this NG as a
safe & respectable place in the face of unrest by loathsome
individuals, & that will preserve our rights!

THAT is how we will maintain our right in the scanning world!

I knew it was illegal, :-)
I really wanted to be able to modify it if possible, to pick up cell/cordless phones (ive seen some european ones, but for like $350!). I can now, due to some new income (YEAH), I can now spend up to 250 to 300. I have picked up cordless phones at freqs. at about 900 - 925 mgz. I know its illegal, but I keep it to myself, and dont use it for personal gain, or black male. So far I dont even know the people. I guess Im just to nosy. Sometimes the cops get boring. :-)

So without the cell/cordless phone capability what would you guys buy?

BTW, I'll look into Pro-64, and see if I like it. I'm very new to this, I like it a lot though, and I need to get started. I have a Police Call, and I understand a lot of this stuff. But I need a scanner, of my own!

Thanx!

That's right loony boy, you're not getting anything you want from me. Your life's a disaster, your job is leading you no-where, and the only solace you garner is from the total thrashing you get on this NG. I suppose some sort of delusional mechanism in your brain prevents you from seeing the contempt the gushes from anyone who comes into contact with you. One of the benefits of circular logic, I suppose.

You'll die alone.

You friggin' loon.

I got my mitts on a Pro-64 that I bought for a friend (who bought it from me) for going to the race track. He wanted a capable scanner to listen to the drivers.

It's not easily modifiable, CPU controlled. But its got some real neat features. I wish my modified Pro-2032 or Pro-39 had some of these tricks.

400 channels and computer interface is neat. You can't input duplicate frequencies, and you can sort frequencies within each 40 channel bank.

But the feature I like best is the "Auto Search/Store". This is real neat. You just kick this scanner into Auto Search/Store and it'll just sit there and and scan your predetermined range. When it finds an active frequency, instead of stopping and listening to it, the scanner stores the frequency into an open channel in the bank you designate. (The number display will blur by, and an irregular "beep.....beepbeep.....beep.....beep" sounds every time an active frequency is encountered and stored. The "anti-duplicate frequency" feature prevents the same active frequency from being stored more than once. Result: You come back in a few hours and one of your forty channel banks is filled with only "active" frequencies that you can scan at your convenience.

That's a slick feature to have in hand-held scanner. You may not be able to modify the Pro-64, but it has enough neat tricks to stand on it's own at $150.

But if you want a 800 modifiable scanner, you need to search out a list of the scanner model numbers that can be modified for 800 band (Bill Cheek's Scanner Modification FAQ is a very detailed reference source for this), and cruise through your local pawn shops and see if any of these models turn up. You may have to cruise quite a few pawn shops, but eventually you should flush one of these models out.

Jeez....I mean this is an entertainment medium. The USENET character is something akin to "Anarchy On-Line". Flames and such comprise a good portion of *every* popular newsgroup. Most of the posts here are about scanners. As far as popular NG's go; the signal to noise ratio here ain't that bad. Spam irks me; flames don't mean anything.

People bitch about flames. But they're just words on a computer screen. That hot feeling in your neck and face comes from your own emotions, not the digitized signals sent across the net.

If someone wants to take the scanner discussion to new academic levels, do the footwork and get yourself approval for a *moderated* NG on scanners or set up a list-server for a mailing list. It's no big deal. Then you can impose whatever controls you wish. Then y'all can go off and trade technical tidbits in a manner devoid of emotion and within the confines of someone else's idea of how to behave on the 'net. Have fun. I'll be staying here.

This is an entertainment medium; this ain't a college campus, and it ain't your job; it's merely an unmoderated NG about a particular hobby. No more, no less.

Why should I? You won't.

> Again, please join us in ENDING these problems! I think you
> would find yourself much more at ease, rather than continueing to
> cause more problems!

You are SO FULL OF IT!!!!!!!! You don't want an end to these problems!! And, IMHO, nobody else seems to either! I know exactly how to make people like you go away, but no one wants to do it! So fine, I say. If everyone else wants to keep this crap alive by responding to your gibberish, then so will I. Maybe when they finally realize that they'd get more satisfaction out of watching grass grow than talking to the likes of you, then they'll finally take my advice.

And your idea of an "on-topic post" needs professional help as well. You're an idiot, who knows next to nothing about scanners, or anything else for that matter. You sound as if you got your amateur license out of a box of Cheerios. Maybe if you'd start reading messages instead of posting them, that would change. One can only hope.

Now go away. There are much better topics of discussion in here than little old YOU.
-Phil

1119. Descrambler Review in!

Newsgroup: rec.radio.scanner

1131. FRS/UHF question

Newsgroup: rec.radio.scanner
Date: 1998-06-10 00:00:00 UTC
From: andy <acorbin@roanoke.infi.net>
Message-ID: <357E988D.4FA6@roanoke.infi.net>
Source record: 157765

A friend of mine asked that I check out a couple of UHF portable radios for him. It was a pair of radios, manufactured by (or for) Radio Shack, and the outside case had GMRS on it. The radios had 10 channels that were displayed in an LCD channel window.

When I checked the radios, they had 1 watt output +/- 5khz deviation, .3 uv sensitivity. They had FRS channels 1-7 in them and then 3 other GMRS simplex channels, one being labeled "EMERG" which I think was 462.550 Mhz.

Anyhow, I didn't see these radios listed in my current RS catalog and thougt it odd they could operate on the FRS "splinter" channels with 1 watt and 5kc deviation.

Anyone know anything about these radios?? About how much they are worth?
Are they legal for FRS use?? Do you need a GMRS license for them?

From what I could see, there was no way to use CTCSS or any type of repeater pairs with them.

Etc. OK, I'm gonna assume this is a troll, but there's been a spate of
this sort of behavior in NYC. The policy announced by NYPD is to treat
each instance as an armed threat to their personnel, with all the
consequent helicopter and SOD response. And they have announced that
anyone caught doing this will be prosecuted under about 19 laws.

I'm trying to monitor a ASINGLE cordless phone (base ~44 MHz)...
I need to REJECT other phones in the immediate area... the target phone is less than 200' away.

I figure I could do this by attenuating the signal from a VERY directional antenna..???... I already tried a small TV antenna, but it still picks up other phones off the back of the antenna.

Any suggestions are appreciated.

Rob.

Yeah, that's a good assumption since Emilo posts these absurd stories from time to time. That laser-pen gag was featured in a Seinfeld episode (George was the primary "target"). If you ignore him, he'll go away...

The PCR-1000 is very good, but the software is crap. And iCOM won't release the protocols to anyone, unless they pay fees, so support from 3rd parties will be nil.
There is support, but thanks to reverse engineering, and you risk damaging the radio if you use this software.
Even iCOM's software can damage the iCOM radio...
The OptoCom has more functions, and I have been asured it doesn't have any of the problems the PCR does. It doesn't scan below 25MHz however.
I don't know much of the Winradio, but seems to be a nice radio, with external models coming out.
Check out

First, I must say this isn't an original story. I remember this same plot from a Seinfeld episode from some time ago. Second, you do realize the cop (at whom "you" - supposedly - flashed the laser) thought the laser dot was from a gun.

<...I snipped ALL of it for brevity!>

Maybe look at it this way: Which is more dangerous? The guy in the car wanting to drive 2 or 3 mph faster than the natural flow of traffic, and swerving around others to get in front? Or the guy in the left lane driving 2 or 3 mph under the speed limit, and causing quite a few people behind him to become impatient?

It's simple, If you purposely impede the flow of traffic for your own jollies, your wrong. Likewise, If the flow is moving along relatively unimpeded, and you just gotta be the one in front, you're wrong too!

would you like to see the ce-232 be able to work with the edacs or etrunk programs to track those erricson trunk sys. e-mail bill cheek requesting this info.
i would rather have this than ce-232 a/d converter ????/ thats my opinion what do you think . we know the opto board has this feature . i don't have the money to buy optoelectronics board . i know the ce-232 can be made to have this feature to . enjoy .pass this info along to other ce-232 owners lets put bill to work .

>Freq Voice Inversion is accomplished by mixing the speech spectrum
>(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
>audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
>constituting the speech inversion.

On a totally unrelated, yet somehow very close tangent --

I've got an ancient Panasonic digital shortwave radio. It was one of the first digital units. It covers AM/FM/shortwave. The band selector cuts the SW spectrum into two bands.

If I tune up 9022 kHz (Iran) on the one band, and then switch to the second SW band, it's tuned to 15084 (Iran).

I used to have an AM/FM radio that, when tuned to the AM station, would be tuned to that station's FM station when the band was switched.

1148. 900Mhz Phones

I'm on vacation and messing around on this dumb computer...look, the
original (or semi modified) thread had to do with the presence of
marked/unmarked police cars on the road, and how they somehow coerce
discourteous drivers into behaving like they should (obeying the traffic
laws and showing some respect for the other drivers they have to share
the road with).... nothing more / nothing less...

this whole attitude of 'get outta my way' or else... is the whole
goddamn problem...I've seen motorists doing the posted 65 mph speed
(some going faster), and they can't move over because of trucks in the
center lane. BUT - there's always some asshole riding up his bumper
wanting to even go faster...

My point was, if some 'cop wannabe' wishes to drive around in an
old 82 caprice and "look" like a cop with a K-55 radar on his dash.
So be it ! If it'll make people more safe and obey the traffic laws,
great....

Too bad the SWAT team didn't think the "dot" was a LASER sight, they would be justified in the use of deadly force, and rid this group of Emilio once and for all!!! Up here in Canada showing up at the scene of a police action, and pulling that stunt would get you charged with obstruction of police officers.. The police up here don't draw their weapons as often as they do in the USA, but they will if required.

BTW- some moron here in Ottawa did the LASER pointer from his apt. balcony last summer, someone assumed it was a laser sight and the SWAT team did appear on the scene and carted the moron away to jail.

HEY, Emilio how about going to a USAF live fire weapons range and shine your laser at an incoming LGB

No. The original thread had to do with a guy that wanted radar guns - nothing
else. Discussion about why he wants them and Cops, Outlaws, Freedom etc.is idle.
Like Denis Leary said: "Shut the fuck up!"

"Society", I "love" that word ! Who defines society ? Lately,
it seems like people in corporate Amerika and government has
been doing the defining. Another question, how can we get
involved in defining that word and at the same time, gum up
the works to those in gov't and Corporate Amerika ?

The common person is as much a part of society as those who
think of themselves as the "elite" such as gov't people and
Corporate people. People in the Elite Media, Gov't and those
who head Corporate Amerika and a large disdain for the common
person and original American values which embrace Freedom.

> that would be willing to design equipment more appropriate to the US
> market i.e. be willing to release the appropriate design information to
> allow third-party vendors to bypass the government regulations...

It is time to clean Congress ! We had these same idiots for too
long and it is time for new blood ! I have been a Republican
all my life but it is time for new parties to come in such as
the Libretarian. These current idiots will not listen to the
people except give us a morsel here and there to calm us down but
yet continue with their same shenanigans. Another item, Congress
is in session year round. Besides cleaning Congress out, their
legislative session should be reduced down to 2 months a year,
put sunset clauses on all laws and require a 98% affirmative
vote to keep Federal laws on the books beyond the sunset clause
and do this every 7 years to where some asinine laws would not
stand the test of time. The same would apply to Federal Agencies
such as the FCC, NHSTA, DOT, DOEnergy, DOEducation except the

Military (Marines, Army, Air Force, Navy).

As for domestic scanner manufacturing, where do we start ? How about going back to simple radio designs to start of with, and put manuals with the radios to where everything is in the open and nothing secret.

I know these ideas are NOT POLITICALLY CORRECT but I and many of you are sick of political correctness ! Foreign corporations should be reminded that doing business in the US is a privilege and the privilege DOES NOT include lobbying for laws.

It seems that the information that is available on the new system is spread throughout a number of Web sites with no real structure. Therefore, I am putting together my own site and asking for contributions from anyone with frequency and talkgroup ID information. Just based on the sites you listed above, and by talking to a few "Power Scanners" around town, I have picked up quite a bit of information on the system, and will be putting it together in a logical order for posting. I've only just started work on the site, but the URL is http://www.ventureconcepts.com/scanner. Feel free to make any suggestions for the structure of the site, as I hope to make this a regular stop for scanner users in San Diego...

I can tell you that "unmarked" cruisers do slow traffic down big time. I know because I drive an old cruiser that looks like it's still in commission. No toys, just looks like it.

Why? Because I want to.

There's a big difference in the speed everyone goes by me when I take the wife's car to work. Her new Explorer demands zero attention and people will go by me like I'm standing still. But....when I'm in the "cruiser", people go by me at 66mph (posted 65). I wonder why? About 20% of the time, I'll drive the 12 mile highway stretch without a single car passing me. I think adding a radar gun to the works would increase that 20% to about 50%. I'll have to think about that for a while.....

I do the speed limit nearly all the time. On the few occasions when I'm in a rush, people get out of my way nearly all the time from the left lane. If not, oh well. I won't tailgate them.

It's also a riot to see people screaming up in the left lane and then jack on the brakes! I would feel absolutely no guilt if someone wrecked because of it. I'm doing nothing wrong by driving the posted limit. The fact that they slow down when they see my car is proof they know they are wrong by speeding in the first place.

Yea....it's a game to me. Keeps me amused on the way to work and home.

>My point was, if some 'cop wannabe' wishes to drive around in an
>old 82 caprice and "look" like a cop with a K-55 radar on his dash.
>So be it ! If it'll make people more safe and obey the traffic laws,
>great....

Well, I don't consider myself a "wannabe". I certainly can't make anywhere near the same cash being a cop! I like the crown victoria, and you aren't going to get them at 1/2 or even 1/3 their value when you buy the civilian version. There's no sense in throwing money away. It's that simple for me.

The fact that I can keep people from speeding around me is a bonus. I don't even have to do anything. It just happens all by itself !!

Never liked GM stuff. The heavy duty Fords do it for me They just seem to last forever. Oh...mine's a white 95. Just bought it at an auction 6 months ago. Didn't have to paint it as it was always an unmarked car. Just needed to plug the 2 antenna holes with....well....antennas !

Dear Ryan,
Turn off scanner; hold down 2 , 9 and turn on radio. This SHOULD clear out the test mode,, but IF NOT, hold down 2, 9. beat it severlyand SCAN while turning on radio. If THIS doesnt work, hold down 2, 9, and MANUAL while turning radio on. If NONE of these work. call UNIDEN;S SVC. CENTER & ask how to remove the radio from "test mode ". Good Luck ! Larry Wiland,

REPLY COMMENTS OF Jacob Brodsky,
Amateur Radio Station AB3A
1371 Woodbine Road,
Woodbine, MD, 21797

June 10, 1998

Introduction

These are the comments of Jacob Brodsky, a radio amateur with over 20 years of experience, a graduate of the Johns Hopkins University with a degree in Electrical Engineering, a recreational experimenter with RF, and a practicing electrical engineer of radio telemetry systems.

Overview

These comments will show why the efforts and concerns of this NPRM are impractical, ineffective, cumbersome, and should be ignored.

Discussion

Judges, lawyers, and police frequently tell us that "ignorance is no excuse for the law." I'm writing this response because ignorance of science and technology is no excuse for bad laws, regulation, or policy. It cuts both ways. Nobody will take this proposed regulation seriously if our leaders keep making policy which looks as if it came from the Flat Earth Society. With this NPRM the Commission is getting dangerously close to that situation.

Anyone with experience in radio technology understands that there is no such thing as radio privacy (the guaranteed absence of third party listeners). However, there can be radio secrecy (listeners bound by law not to divulge what they hear). Around the world, radio privacy is understood to be technically impossible to enforce. One would have to place a private citizen under so much surveillance to prove a violation of radio privacy that it would violate his/her human rights. Radio secrecy, on the other hand, is commonly the law of most democratic countries.

This is nothing new. Ever since the age of spark radio, it has been understood that if one wanted to keep a radio conversation private, that one had to use encryption, secret codes, or a combination thereof. Nothing in today's technologies has changed this paradigm.

Unfortunately, few in Congress seem to understand the distinction between radio secrecy and radio privacy. The result has been a very dangerous muddle of legislation. I see no benefit to having the Commission perpetuate this ignorance and foolishness any farther than required by Congress.

The first problem with this regulation is the definition of what exactly constitutes a "scanner." The definition of "a receiver capable of switching between four or more frequencies between 30 MHz and 960 MHz and capable of stopping at and receiving a signal detected on a frequency" ignores the possibility of a radio with a computer control interface but no memories of its own. Further, the definition is vague as to exactly what "switching" and "frequencies" means. What if there were some kind of fine tuning knob on a receiver? How many "frequencies" does it cover? How many "switches" can it do?

Most receivers in this frequency range have the capability of being controlled by computer. It is not difficult for individuals or small companies to build computer controllers which restore full scanning capabilities to a plain receiver. I doubt the FCC has the authority to ban various uses of computer equipment. So I fail to see exactly what the FCC can do to prevent "scanners" without affecting receivers which are not by definition "scanning receivers."

Second, what exactly is test equipment? I have used scanners to find IMD sources, sniff out a local oscillator frequency (to see if it was working), and I have even used the scanner's local oscillator as a makeshift signal generator. Admittedly, most scanner users won't go this far. However, my point is that a scanner can be a valuable piece of test equipment on my test bench. Were the scanner to include a calibrated signal strength display, it could easily be called a "selective level meter" or even a "poor-man's spectrum analyzer" when used with a computer.

So what features or performance specifications should one use to distinguish between test equipment and a consumer radio? The distinction is actually quite vague. This is especially the case because scanners are usually purchased by people who already have some

technical background. After all, it takes knowledge of the radio spectrum to know what numbers to punch in to a scanner.

Third, what kind of controls could one place on people who purchase unblocked receivers? Shouldn't a purchasing manager from a large company be able to buy one, even though s/he is not a licensed radio technician? What if the technician whose license might be used to purchase such equipment leaves the job? Where should the responsibility for the use of that equipment go to?

At the other end of the business spectrum, what about individuals like me? What if some day I were to start an RF engineering business from my shop at home. How would I, with an Engineering degree and my ham radio license, purchase unblocked test equipment? What basis could the FCC use to determine who can purchase such equipment and who can't?

I simply can't imagine criteria for the sale of unblocked receivers which could filter out trouble makers without affecting legitimate users. I don't think there is an equitable, non-intrusive solution.

Fourth, prevention of scanner modification is not easily defined. What exactly constitutes "readily being modified?" Keep in mind that many scanner enthusiasts are technically inclined.

The situation as it stands today is not all that bad. Once the cellular band blocking is "burned" in to a processor chip, so that modification is not possible without unsoldering and replacing the chip, most folks will give up on that approach. Instead, they'll seek other means.

Regulating kits is not the way to stop this behavior. It isn't hard for someone to sell downconverter kits intended for amateur use which could be easily modified for Cellular Telephone interception. Not only that, some kits can be pieced together to build a cellular receiver, despite their legitimate uses.

For example, there's nothing wrong with purchasing an R2 direct conversion receiver kit (a receiver capable of receiving many modulation modes, given the appropriate local oscillator and peripheral support) from Kanga US. And there's nothing wrong with building it for service at 45 MHz so that one can hook it up to a UHF TV tuner. Put them together, and what do you have?

The funny thing is that building kits is the hard way to receive cellular. Anyone who understands what a down-converter is knows that a common cable TV tuning box attached to the scanner will make scanning the cell phone bands a breeze. Just hook the cable side of the cable TV tuning box to an antenna and hook the TV side of the box to the scanner. Set the scanner to tune around TV channel 3 or channel 4, and...

The good news is this is not the problem it is made out to be. But for a very few high profile interception cases (the incident involving Speaker of the House, Newt Gingrich comes to mind), divulgence of intercepted transmissions is not a frequent occurrence.

Fifth, while it is true that there are test modes on some Cellular Telephones which can be used to listen in to conversations, very few individuals are likely to bother with the hassle of using these modes to listen in. It is cumbersome, after all, and there are far easier ways of listening to the cellular phone band. Besides, these self test modes do serve a purpose for manufacturing and maintenance personnel. And once again, what criteria could the FCC mandate to allow for testing, while at the same time prevent unauthorized use? It would not be wise for the Commission to get in to this kind of rule making.

Sixth, the interface to and from a radio (for the use with digital signal reception) should also be left alone. After all, with ham radio operators starting to use public domain paging protocols, and APRS packet standards over OSCAR satellite links, there are ample reasons why someone would want direct demodulator access to a scanning receiver. Is the FCC interested in regulating these features too?

The only thing in this proposal which might make sense is the image rejection standard. If Uniden wants to propose new image rejection standards of at least 38 dB for part 15, (as described in paragraph 6) I see very little wrong with that.

The Commission is going overboard in paragraph 7, however, by proposing that the whole radio be exposed to a certain field strength to verify total performance. Proper verification of this would require access to an Anechoic Chamber (to keep the test from radiating in to the outside world, if nothing else), whereas the proposal in paragraph 6 requires nothing more than the service monitor which would be used for alignment anyway.

If there are additional cellular telephone signals available to the scanner because of poor shielding, it probably won't be enough to warrant additional certification testing.

I believe regulations to pot the interior of a scanner to prevent modification is overkill. I've already pointed out that casual mischief makers are usually stopped cold by scanners which don't have mode configuration external to the microprocessor (such as a ROM chip, a diode, or a jumper). Keep in mind that simple and effective alternatives exist to modifying a scanner.

Besides, potting the scanner is not as cheap as it looks. Once an aligned board is potted, it often detunes. There could be a substantial quality control problem facing those who attempt this sort of measure.

I can't help getting the impression from the Commission as well as Congress that it isn't really scanners they're scared of. It's the

users. To paraphrase that overused clichï¿½, "Scanners don't disclose cellular telephone calls, people do." If there's a will, those with even a meager technical background can work around these ill-advised regulations. The Commission would do well to focus efforts toward prosecuting those offenders, such as the McDermott's (the couple who intercepted Newt Gingrich's conversation over a cellular telephone), who disclose what they hear.

Conclusion

It's a proven fact of human nature that as soon as someone says "don't look at that naked lady riding her horse down the street" most people will turn and look. So what were our esteemed friends, the CTIA, thinking when they got Congress to legislate the cellular telephone bands as a "don't look" band? It was a foolish idea then, and it looks even worse now, particularly in the light of this NPRM.

I see many problems going forward with this line of regulation. As with many other kinds of radio equipment, scanners are a tool. Tools can be used for both good and evil. We don't legislate the manufacture of binoculars just because they might be used by Peeping Toms. Why should scanners be any different?

I don't think it wise for the FCC to attempt regulating what an individual's computer should and shouldn't be able to do with a radio. With commonly available alternatives and loopholes, I don't think the FCC will be particularly effective at regulating kits for down-conversion, or at telling cellular phone manufacturers what service modes they should or should not put in their phones. I doubt it would be an effective use of Commission resources to attempt setting minimum performance or construction standards for manufacturers. Once the Commission gets in to the business of regulating consumer receiver performance, I predict tremendous delays while the already understaffed FCC attempts to certify each and every change to a manufacturer's design. The probable delay on the part of the FCC outweighs any benefit to the public.

Frankly, though I dislike it, I can live with the status quo. However, I see no point in regulating how many nails to use for securing window shutters so that Lady Godiva can ride nude down a public street. Always remember, the story of Lady Godiva is legend precisely because no-one looked! Don't expect this every day from the general public, or you will be disappointed.

Sincerely,

/* signed */

Jacob Brodsky,
Amateur Radio Station AB3A

Yeah, I didn't really think it was possible for
that to happen. I've seen milder cases of it
where 800 MHz was "off" by a kHz or two. I chalked
that up to the transmitters being off freq. But
not now. Not in this case. 5 kHz is just too
weird......

Still looking.......

Jacob,
You mean to tell me that a person has to go though this kind of crap to get a idea accross to the FCC. No wonder we have money problems in government. I would like to be the one that sells them paper. What if you don't own a computer does that mean you can't send a formal reply? No computer no disk see what I'm saying. So our government (FCC) has gotton to be so big that the average man can't reply to them? I do belive that if this type of government continues, it will not last in this contry to much longer. Jacob this is just awful. I will comend you on taking the time letting us in the Amateur community know how to submit such a paper. It looks like it to me the average man does not stand a chance. I mean one has to be a lawyer just to express his or her opinion to the FCC. That is pretty darn bad knowing what a lawyer charges an hour.
I know this has nothing to do with the FCC but it does follow the same lines. I have noticed the press has been really putting a high profile on guns and schools. This has always been a problem, kids, guns, and gangs. Look at the Newyork street gangs of the 50's and the mob gangs of the 20's this has been a major part of Americain soical life. Welcome to the U.S.A. I like to say. I know that this has noting to do with what you are saying but in a around about way it does. Here is what I'm trying to say. The government has gotton to be so big that the average guy can't express a formal reply with out getting a lawyer. They have gotton to be so big that they can't see the forest beyond the trees. Government is so big and so out of controll they can't controll it themseleves. They are to busy worrying who got oarl sex and they are mad cause they didn't get any. (another story sorry). So when its out of controll they try to do everything in there power to take our guns away. So what do they do they put a very high profile on kids and guns. Thus changing public opinion on guns then disarming us then they will work on doing away with our other rights. Free speech free press (censorship on the internet now. People VS. Larry Flint in the 80's tested this right). So I do belive that if the democrats get into power another four years this is what is going to happen. I am not a republicain nor a democrat but to save this great nation of ours we need to put more independance in the house of rep. and a republicain in the white house. I mean they are already attacking personnel freedoms (Smoking) and a guy can't trade in the econemy with out a ton of paper work(own his own busisness). I don't smoke but the more they say Americans you can't do this the more they will. Its just the way Americans are.
Thankyou for shareing this with us As far as the law about 800MHz well I belive that once its on the air its public property. How in the heck are they going to enforce this can of worms. They can't get a grip

on CB radio, Amateur radio. I just think that its just more waste. Why don't they tell us what we can do instead of what we can't. It would take up less paper.

A superb comment! Nice going! I wish you had
included one other point..... that even as we
legislate cellular-capable scanners to oblivion,
the cellular services are moving to CDMA and
other digital technologies that simply cannot
be detected/decoded by analog receivers.

In other words, the entire matter of radio privacy
is headed toward mootness. The issue will take
care of itself in due time.

Any possibility you can add that argument to your
comment?

WOW and you lived to tell that story.. ?

In Canada...You would have been charged with obstruction of Justice , Weapons Dangerous , and you very well may have been shot on sight!

Laser sights are not legal here , however thibgs get in Canada and we have no control over it...

However I can assure you if this story is real...The officers would have / should have shot to kill on site.

At night...with a laser sight on one of em...!! Gimme a break!

I know from experiance that the worse nightmere an officer can face is that a perosn is NOT welding a legal weapon , and that of a toy , and the officer kills you only to find out it was a toy...this is uncommon , however but does happen .

No officer ever heads on patrol with the intent or much less the thought of having to use deadly force, however given what I read , they would have been justifyed by doing so in your case.

Your lucky to be alive...did you buy a Lotto ticket , seeing as your luck is rather good ?

My god...its ppl like you who give the rest of us a bad name in RE to scanners!

From: sneaky@toosexyforyou.com
Message-ID: <6lmkc0$9dp@newsserv.caiw.nl>
Source record: 157805

Hi,

I just bought a second handed scanner the ICOM IC-R100.
It's a great scanner allthough i'm missing the manual.
I need some help to scan a certain frequency, does somebody know how this scanner has to be programmed for running between 2 freguenties.
for example between 30.000 and 40.000. Any help is appreciated.
please mail me to yvonowee@hotmail.com or reply in NG

p.s. if someone has the manual in a txt file or doc it would be terrific when you send me a copy

best regards, Yvonne

1172. Re: FRS/UHF question

Source record: 157806

Andy:

Those radios are for use on the GMRS band, and require a "no test, just send us money", license. They will operate within the FRS frequencies, however to do so, technically, would be illegal. And, if I were going through the trouble and expense for a GMRS license, I'd opt for more than 1 watt. Typically GMRS handhelds can be purchased with up to 5 watts, and base/mobile units come in at around 35 watts, if I recall. Some GMRS radios will also interact with repeaters, i.e.: Maxon.

Bill Crocker

I knew it. First Mackerel the Gay Blade, and now Emilio "Captain Scanner" Goldstein is back with more ridiculous trolling lies.

Notice any simularities folks? I do. I think they are one and the same. Here's why:

1. They claim to post relevant information, when they do not.
2. They get off making people believe everything they say as fact.
3. They thrive on attention and have done anything to get it.
4. They are delusional dipsticks who don't have and won't get, a clue.

Notice how many replies these bozos get? No wonder they won't go away - it's like smacking a dog with a hammer and then waiting to see if it comes back for more...and IT DOES!! Tons of entertainment for no-life losers like them.

I've said it before, and I'll say it again. The only reason they are here is because they will always get a response from SOMEONE. Everytime someone hits the reply button, they get what they want - attention. If we ALL ignore them, they will go away.

I have also heard people say that ignoring them never works. Anyone who says that has never tried to ignore these losers. I have personally seen the effects of an entire discussion group ignoring trolls. Some jerk posts an obvious troll, and the whole group acts as if it never happened. No replies, no "God that was stupid", nothing. The message expires and the loser moves on. It's that simple. Try it and see.

My 2 Cents,
-Phil

Obviously, this is just another one of our many usnet-trollers who will post any obnoxious comment in the hopes of suckering anyone into a response of any kind. It's really best just to ignore the idiots. I can assure you that this guy is not really interested in purchasing such a thing, otherwise he would have done so elsewhere. Another troll for the killfile, if you're lucky enough to have one.

I first want to thank you guys for my earlier problem. I was dreading the reset, but I had to do it. For the info, it is a Uniden Bearcat SC150. But it ended up being a good thing. I needed to clean it out. and

I updated my old freqs.

Now, if you guys had about 150 bux to spend on a scanner, what would you

buy?
I would prefer one that can pick up the cell/cordless phone frequencies.

The SC150, is not mine. I am doing a extended barrow, you could say. But

I have to return it soon, Im considering buying that model..... I know 150 bux aint much. Maybe I can get more...

Anyway, what would you all buy?

Well, you're right about that... Unfortunately in the case of Goldstein, no matter how ridiculous his stories are, there is a bunch of people that thinks its true. Look how many serious and earnest replies that post has gotten from people who clearly are not using their heads. I don't know which is more worrisome: the fisherman who post the trolls or the fish that takes the bait.

1177. Best computer controlled scanner?

Hello,

I am looking for a small computer controlled scanner, along the lines of
the Icom IC-PCR1000 or the Optoelectronics Optocom.

What others of this type of scanner, if any, are available?

How does their performance compare?

How about software, user interface, etc.?

Are there any that are cellular unblocked, or readily modified?

Finally, what about pricing?

Thanks in advance,
Stan

I suggest purchase of a antenna that is resonant to 47MHz. Mount it as far away from the
vehicle's computer as possible. That should take care of it. Many vehicles have onboard
RFI. Chevy pickup trucks were notoroious as we found years ago when our state's highway
department bought a slew of them. We had problems with 47.22 and 47.34. A caution. Don't
invest too much in that antenna sometimes nothing works.

1181. **2 meter/440 antenna for Scanning?**

Newsgroup: rec.radio.scanner
Date: 1998-06-10 00:00:00 UTC
From: teenham@aol.com
Message-ID: <1998061000294800.UAA06645@ladder03.news.aol.com>
Source record: 157817

Hey there...

I got hold of a Dual Band (2 meter/440) mobile antenna made by Larsen several weeks ago, and it works great for 2 meters, but my question is: Would it work equally as well on the scanner bands? I have tried it with my RS PRO-39 (awesome scanner, by the way) and it seems to have very good reception on the VHF Low, VHF Hi, and UHF Bands, but 800 MHz reception is not so good. Would it be worth it to buy a specially designed mobile scanner antenna, or would this one be OK? I don't do all that much scanner listening (the Final Exams at school have been keeping me pretty busy), and most of my monitoring is concertrated in the 453 MHz and 501 MHz ranges. Any input on this is welcome. Also, would there be any way to improve 800 MHz reception? Thanks.

Morris-

TAKE ACTION!

That seems to be the primary point of your message. Taking action
is how we preserve our rights. In life, it we sit on our backside
& rest, nothing happens. Like the American Independence, it was
only acheived by people acting as individuals & taking the
responsibility to do something & act when action is needed to
preserve the integrity of correctness. Certainly, that could even be
compared to the history of this NG. While a few individuals attempted
to sour this NG for their own selfish pleasure, a nucleous of
responsible
& insightful individuals took necessary actions to preserve the
integrity
of this newsgroup & in some cases even speak for those who can not
speak for themselves.

As we have learned in not only the history of this NG but more largely
the history of the US, we must act to preserve integrity & democracy.
Your suggestion of writing to Senators & Representative about the
right of scanning is very good. The individuals who do so can rest
assured afterward, knowing that they took action when needed to preserve
their rights & a part of the both the integrity & democracy of America.

Morris, I salute you in your planned action!

>nichts und ist nur teuer. Son Pager kostet zwischen 600 und 1500DM, je nach
>Modell und Ausstatung. Ist aber auch 1000 mal zuverlï¿½ssiger als alle anderen
>Pagersysteme.

Naja, mit dem 1000 mal zuverlï¿½ssiger sei mal dahin gestellt. Ich
selbst sitze in einer Alarmzentrale und die jetzige Generation dieser
Pager scheint mir in vielen Punkten genauso anfiï¿½llig.
Bestes Beispiel, unsere Alarmzentrale ist selbst ein Funkloch (durch
irgendwelche spezielle Verglasung, hab ich mir sagen lassen). Viele
der eingesetzen BOSPager gehen schlicht und ergreifend nicht in diesem
Raum, dennoch: mein Cityruf (!), bekanntermaiï¿½en zivil&analog
funktioniert immerhin in diesen Riï¿½umen bei jedem 2. page :-)

Ich denke mal es wird Zeit fiï¿½r 2-Wege-pager (wie in USA erhiï¿½tlich),
die zumindest in der Lage sind, eine Empfangsbestiï¿½tigung iin
irgendeiner Form zuriï¿½ckzusenden (z.B. als Status). Dieses wiï¿½re eine
iï¿½berfiï¿½llige Erhiï¿½hung der Zuverlïï¿½ssigkeit und Vereinfachung fiï¿½r das
BOS-Paging. Aber dazu muiï¿½ wahrscheinlich das Netz dichter ausgebaut
werden, so daiï¿½ die schwache Sendeleistung eines miï¿½glichen 2-wege
pagers ausreicht.

Griï¿½iï¿½e,

Stefan

In my opinion...

1. Get rid of the Radio Shack discone, and replace it with a better quality unit like the ones made by Diamond.

2. Better yet, use a directional antenna (like a yagi used for 2-meter ham radio) and install it with a rotor. This will give the best possible reception.

3. And most important of all, make the antenna as high as possible. Raising it another 10 feet will probably do a lot more good than any amplifier that you could buy.

>Does anyone know if they are on line or are they only for Big Brother?

Some are on line... maybe not the I-680 ones, but other CalTrans ones
just like it, throughout the Bay Area. In fact, besides the CalTrans cameras
some TV stations have their own, and some TV stations put one or two of
theirs as well as one or two caltrans camera feeds up on their WWW page.

For links to the cameras, try:

www.hotcoco.com (find "traffic" in the menu)
www.sfgate.com (probably under KRON-traffic)
www.kpix.com

Also, the CHP CAD web page I think has links to the Caltrans cameras.

Message-ID: <357E490B.1C07@ix.netcom.com>
Source record: 157842

I am thinking of buying a Bearcat 80 XLT as my first scanner. The lowest price I've found is $129.00

My first question is, Is this a good first scanner at this price?

Secondly, Are there many modifications I can do for military, aircraft, cellular etc.?

I have quite a bit of electronic experience so the degree of difficulty of mods is not the issue but rather available materials (schematics, instructions etc.)

Thanks,
D. Mac

Ah yes, the Achilles heel of keyboard emulation - speed.
Does kinda put a damper on the project, eh?
Still better than pecking for half an hour on the older scanners.

BTW, I do a full Pro-43 upload in ten seconds these days - much nicer.

>> At least the firmware locks out zeroed channels. It would be a
>> pain to go find them all.

>Small gratuity, I guess.

Yeah, pretty small. BTW, I've always thought that a nice feature
would be "temporary lockouts" for channels that act up due to
interference or have boring comms on them for a while; All
temporary lockouts could be removed with one keystroke...

> Does kinda put a damper on the project, eh?

Yes..... kind of like you know you're reinventing
the wheel.....in advance.

> Still better than pecking for half an hour on the older scanners.

Ummm hummmm. 800 keypecks can get awfully old
like around the 8th peck.....

> BTW, I do a full Pro-43 upload in ten seconds these days - much nicer.

None of my business if you don't want to make it
so, but I'm curious about your process. Obviously
not keyboard emulation..... and apparently you don't
use the RxD port...since it either doesn't have one;
or if it does, it's either burned open or at least
unlabeled and therefore nigh improbable to figure out.
So my best guess is a direct connect to the EEPROMs?

I would imagine the physical connection to be child's
play, but how to ramrod the data in there? I figure
you for a hardware man; not software, so is it with
a terminal program sending serial data? After all,
those are serial EEPROMs.......

Admittedly, a superior methodology with just one
teeny weeny drawback......you can't remote control
the PRO-43 from the PC keyboard, right? I love that
aspect of the CE-232 Interface with the PRO-43 because
the PC keys are 20x larger than those PRO-43 keys,
and well.....my club fingers don't do well on limited
real estate.

Did you ever publish that mod of yours for the PRO-43,
and if not, would you like to? Sounds worthwhile from

a human angle and since the PRO-43's market "life" is
long over, what the heck?

Off the wall, did you ever do that shortwave mod to the
PRO-43 and if so, did you do any front end rework?

> BTW, I've always thought that a nice feature
> would be "temporary lockouts" for channels that act up due to
> interference or have boring comms on them for a while; All
> temporary lockouts could be removed with one keystroke...

Let me add a flourish to your wish list....how's
about a programmable time-out in addition to the
manual override with a keystroke? Like after 24-hrs,
reset all temp lockouts to normal. Or any time the
user wants within reason? The PRO-43 doesn't have
a clock, per se, but a countdown timer might could
see some good duty in that capacity, no?

WhoDaMan@webtv.net wrote:

> I can't believe that the famous Bill Cheek responded to one of my posts.
> I'm honored.

I respond to a lot of posts, and I try
real hard to employ "affirmative action"
and not discriminate. But there are a
few peckerwoods, nitwits, imbeciles,
popinjays, morons, idiots, and adam-
henries who have made it to my Twit List.

> I just have one question for you about Allsafe.
> Is his name truly Allsafe or is he too hiding
> behind the anonymity of his computer?

I don't know him, and I suppose you could say that
he takes comfort in his Fortress of Solitude. We
all do in a manner of speaking. Some more than
others, and I can't speak for his situation. I
reckon someone who didn't know "bcheek@san.rr.com"
could say I'm using a bogus I.D.

But I dunno about "Allsafe". Maybe his name is
Alls Afe and there is no intent to deceive. But
I just dunno. So ask HIM. What the heck? He
didn't flame you or cast dispersions on your
gene pool or anything like that. He may have
been a little direct and up front, but the nature
of public messaging more or less calls for getting
your say said and get outa there.

Out there in "real life", we get a chance to pass
social amenities and ice-breakers before we grin
and inquire about the other feller's gene pool.
Here in public messaging, you just gotta get down
to the point.

Here, lemme tell you a long story in short form.
Back in the mid-70's, Citizens Band Radio went on a
BOOM.....and almost overnight, everyone had a CB.
That "overnight" was most dramatic at Christmas
of 1976 when every kid and lunatic received a $39

Kraco or Royce CB rig. By New Year's, the band was alive with the cacaphony of peckerwoods, nitwits, imbeciles, popinjays, morons, idiots, and adam-henries........and lunatics.

We spoke of THEM in the same light that WebTV'ers are seen now. There isn't a solution, aside from "grin and bear it" and move up and out to a real ISP as soon as you can.

Internetters have long paid their dues by having to learn their computers and software.....and this outlook isn't all that different from brasspounder hams who had to learn Code and figger everyone ought to learn it, too. "Real" Internetters look on WebTV as the "easy way" to put it mildly.

So it is with some experience under my belt that I suggest to you to "grin and bear it". There just isn't a solution that you'll find pleasant and easy. If you can stand the heat, then stay in the kitchen and play. If you can't, then move up to a real PC and a real Internet account or take up knitting and crocheting. Those are the solutions, anyway, as I see them. You ain't ever going to change humanity; but YOU can change yourself. Or not, as you see best.

WhoDaMan@webtv.net wrote:

> To quote the great philosopher Rodney King, "Can't we all just get
> along?" ;-)

Not......since Eve winked at Adam and Cain
put the hurts to Able.

Noooooo, we'll not all be getting along....not
in our lifetimes and not as long as there are
governments that don't bend to the will of the
People. So long as jerks like 'Sa Damn Shame
and Fiddle de Castrate walk the earth, no, we'll
not all get along......

When I was a kid, Nikita Kruschev standing behind
a podium in the United Nations, pointed a long,
bony finger at ME (via TV, but it was still AT me!)
and swore on all that was holy that I'd live under
the red flag. I was only 8 or 10 years old at the
time, but I remember it as vividly as if it were
a few minutes ago.

On that day, I became sworn to eternal hostility
over every form of tyranny over the minds of men.

So, I...for starters....will not "get along".
Not as long as there are people starving on this
planet; not as long as the drug peddlers see my kids
as a potential market, and not for as long as my own
wretched government attempts to dictate what I can
and can't do with a passive radio receiver in my
boudoir or bathroom.

No....we all can't get along, and we should never
negotiate our values in the vain, futile attempt.
The parasites WANT you to negotiate away your values.
That's how they enter and take up residence in the
balmy comfort of your mind, and then inject a
narcotic elixir of warm, gooshey trust; uncommon
sense; and apathy to complete your enslavement.

I understand your meaning....but the answer is still
"No." for the aforementioned reasons. There is a
very real tyranny ever at work right here on these
newsgroups. There are those who would stake a claim
to the real estate of your mind.

But there is power to the individual, a very real
Power of One. And it is an absolute power. You are
master of your domain....and you are free to read what
you want and to delete or not read what you don't want.

You are also free to post as you see fit. You can
erect an impenetrable force field about your Internet
vehicle....and you can lob giga-ton nukes with utter
impunity.....and immunity.

It can't possibly ever get any better than that.....
....unless there comes a way I can spit a cud of
Bull O'the Woods chewing tobacco through my monitor
square in Mackey's eyes.....and pick a booger outa
his schnoz and feed it to 'im....and take off his
head and shit down his neck. THEN it would be better.

That not possible for now.....the next best thing is
to expose his brand of tyranny for what it is.....so
that everyone can immunize themselves against it, and
thereby isolate and excise him like a cancer.....

But even then.....we won't all get along. Someone will
pipe in about how unfair it is to surgically isolate
"poor ol' Mackey"....and whole new round will start and
there will be two Mackey's instead of just one.

So it really is as good as it gets. If that ain't good
enough, then you're in the wrong ballpark.

IMHO.

1213. FS: Sportcat SC150 $40 shipped

Newsgroup: rec.radio.scanner
Date: 1998-06-10 00:00:00 UTC
From: bx557@torfree.net
Message-ID: <EuBqwu.Dr3.0.bloor@torfree.net>
Source record: 157849

I have for sale a Uniden Sportcat 150 (black) scanner, including manual, Sportcat Frequency Guide, original box, and a telescoping antenna. I don't have the AC adapter/battery charger, but any 6vdc power supply will work. This scanner has the following bands:

29 - 54 MHz
108 - 174 MHz
406 - 512 MHz
806 - 956 MHz

It is cellular-blocked but can still pick up cellular signals on 894-915 MHz. $40 shipped anywhere in the continental US.

If anyones interested, I also have a BC210xl scanner. It's an old 18-channel tabletop model. It doesn't work, for parts or repair only. $5 + shipping.

I am located in Dayton, Ohio. Please reply to an422@mvcn.dayton.oh.us.

I don't listen to cordless or cell phone calls as I find them incredibly boring. It's just the idea of the whole thing that bugged (no pun intended) me and I wanted to provoke some thought on the subject.

Mike

My 2006 does the same thing. Low band, high band and UHF are right on freq
but 800 & 900 are exactly 5khhz off. Radio Shack said they couldn't do
anything about when I bought it several years ago so I have just learned to
live with and program accordingly. If yoy find a fix, please Bill let me
know so maybe I can get mine up to spec.

Thanks,
Mike

Boy, they do not have much internet access in jail. Well i'm glad that's over.
I'm all set for loads of fun! i spent $149 for a super laser-pen. It shoots red laser dot the length of a football field. I tried this last night and it's great. This sheriff or constable or someone says over the radio that he's going to pick up this guy who has a warrant. It turns out that that was where I was going happen to be located anyway, so I drove all the way to this fugitives house and parked down the block. When the officer showed up, I landed a little red dot right in his chest, and he kind of freaqued. He called dispatch and said hey I've got this little red dot on my chest and it follows me around. I can hear it all on my scanner radio. Anyway they sent him a backup and when the backup arrived, the red dot dissapeared.
So they get on the radio and say that the red dot is gone, and what the heck , and when the backup turns around, the red dot shows up again. I can hear it all on the scanner-rama. It was a load of fun.
So they take this criminal to jail , and I happen to pull up next to them at a stop light, and presto there's this little red dot on the guy's right hand. I can see him looking it over , and anyway he missed the green light and some guy behind toots his horn. I make a quick right turn and get away.
later the guy is talking to the other guy on the channel about the little red dot, and how strange it is but I don't care. I got my rights. They shoot radio signals through my body, I got a right to listen to them, and I got a right to shoot little red laser beams through the window of the squad car.

> Zentrale,

Nee.
Es handelt sich hier offensichtlich um DME's nach der TRBOS.
Diese funktionieren genauso wie die kommerziellen Funkrufdienste; z.T.
sind auch die Geraete gleich (z.B. Motorola Scriptor LX2).
Der Vorteil der BOS - eigenen Systeme ist halt die eigene Infrastruktur,
deshalb kann die Lst. direkt auf die Alarmgeber zugreifen. Nur so kann
die Verzoegerung bis zum Ausloesen der Geraete in einem vertretbaren
Rahmen gehalten werden (bei gut geplanter Technik ca. 20 sec.).
Ausserdem ueberwacht sich die Infrastruktur (Alarmgeber und -Umsetzer)
staendig selbst und ist in wichtigen Bereichen i.d.R. redundant
installiert. Dies ermoeglicht schnelle Erkennung und Beseitigung von
Stoerungen (mit eigenem Personal).
Ob allerdings die Funkversorgung besser ist als bei kommerziellen
Netzen, haengt einzig und allein von der jeweiligen (oertlichen)
Auslegung ab; anders gesagt davon, wieviel Geld die Gemeinde (oder wer
auch immer) in das Netz investiert hat. Bei uns in DO ist es teilweise
schlechter als z.B. TelMi.

AFAIK geben aber einige HO's auch kommerzielle Pager an ihre Helfer aus,
vor allem fuer Einheiten mit ohnehin laengerer Ruestzeit.
* Diese koennen dann im Prinzip auch privat ausgeloest werden *
Zur Unterscheidung:
Auf dem Typenschild der BOS-Pager befindet sich Die Typenbezeichnung
"DME I" fuer Ton/Sprache bzw. "DME II" fuer alphanumerische Pager.

Your rights end, where the rights of others to drive peaceably and law abidingly begin. May you experience of the tragedy of losing a family member to an agressive driver, or experience a wreck yourself as a result of wanting to disobey traffic laws or drive discourteously.

I've had it with you fucking "road warrior" wannabes. You jerks are the reason our insurance rates are so high. Too self important to think they have to be grouped among the 'common' peasants.

You live your life anyway you want, as long as it doesn't fucking intrude on the rights of others.

Hey I lost a brother in law, and 2 people are dead because of shitheads who have a bug up their ass with wanting to prove to the world their macho brand of attitude when driving on the highways.

>it does
>little to convey your point and paints yourself more as a vigilante,

side note: in communities where the citizens are armed (concealed carry permitted), crime rates are pretty low. bad guys ("lawbreakers") don't know if they'll get busted when committing a crime. So to a certain degree vigilantiasm promotes civil behavior.

Is it being vigilante to ask that people drive within the confines of the law and common courtesy ??? anything that promotes that cause is fine in my book!

>I put you into the same corner as the people who bought those radar
>emmiters which do nothing but shoot out spurious X and K band signals.
>An egomaniac hypocrite trying to hide their shortcommings under the
>guise of community service.

Now this is laughable, and a case of the pot calling the kettle black. "egomaniac hypocrite trying to hide their shortcomings" ? What goes thru the psyche of the asshole who is weaving in and out of lanes trying to get ahead of the schmuck in front of him... just so he can gain an advantage of 10 feet ? .. or be the first one stopped at the red light ahead (slamming on his brakes to stop right before it), or to get in front of the other guy in the toll booth lanes....

To me, that's an egomaniac who has shortcomings and needs to prove to the world that he's better than the people he almost hit doing his reckless brand of driving.

>I see just as many inattentive slow drivers as I do fast ones everyday
>and both are just as likely to injur or kill others.

Slow drivers don't rear end other cars and spin them around with enough force to roll over 4 times and or split in 2 pieces wrapped around a phone pole... The asshole doing 85 mph (thinking he's a superior driver), is a hell of a lot more dangerous than the dude doing the speed limit and being a courteous driver.

>Simply pointing
>the finger at speed is just treating the symptoms and not the illness.

yeah, the illness , is everyone feeling so self important, they have
to be in such a hurry to get somewhere.

>If you think it's so dangerous out there, then spend the money on
>defensive driving courses instead of a radar gun.

Defensive driving reinforces the fact that assholes are on the road!!
it does nothing to address the problem of getting them off the road.

Hi,

I've been using an ICOM R8500 for the past 6 months or so. It is really great doing nearly all things I want and more.

One thing I do not like is that after a transmission has ceased the scan continues 3 seconds later, therefore the delay is not variable, although the resume scan time can be varied. Does anyone know how to change this?

Also has anyone tried and got any views on the ICOM supplied software for the ICR8500 or any other similar s/w.

TIA

Mike Dodds

Hi All:

This is my first time posting here and am new to this hobby.
I just purchased an old Bearcat BC100XLT as my first scanner but I
did not get any manuals etc with it. It's in great shape and works
well so I would like to keep it but I would like to know more about
it.

Would anyone out there have any specs or usage instructions they could
email (or post) for me.

Any help would be appreciated.

Thanks

John.

>to monitor frequencies in the kHZ range (1kHz-200kHz),...
>I am wanting to modify it so that I can "hear" ultrasound (bugs,
>water, gas leaks, etc.) Anyone ever hear of this before? ...

A radio scanner won't do this. I build an ultrasonic receiver and
wrote this article in 1989. BTW, it still works fine.

I BUILT AN
ULTRASONIC RECEIVER

Copyright 1989, Bob Parnass, AJ9S

Both midwestern farmers and radio enthusiasts suffered dur-
ing last summer's record drought. Many of us were plagued
with power line interference, as the wooden power poles
shrunk without moisture, allowing the power line hardware to
become loose and electricity to arc. We could hear the
"eggs scrambling" noises throughout the shortwave spectrum,
even up through 220 MHz in places.

I spent a few days driving around the neighborhood with an
Icom R-7000 VHF/UHF receiver on the front seat trying to
pinpoint the offending power line fixtures. I even walked
part of the area with a portable scanner, attenuator, and
home made loop antenna.

It was a challenge. The fun of the hunt outweighed the
annoyance of the interference. Although I was able to
locate a few offending transformers, the power company
didn't return my call.

Vowing to build another gadget to help pinpoint power line
leaks for the next time this happens, I set my sights on
building a device to detect the ultrasonic energy emitted by
leaky lines. William Nelson's Interference Handbook (Copy-
right 1981 by Radio Publications, Inc.) shows an old Hewlett
Packard ultrasonic detector, useful for finding corona
discharge in the 30 kHz to 50 kHz range (pg. 117). Autumn
rains came, vanquishing the noise problem and cooling plans
for an ultrasonic detector.

Article Revives Interest

A magazine article rekindled interest in ultrasonics. February 1989 Popular Electronics featured a construction article on an ultrasonic receiver. This was a superhetero-dyne circuit, with a tuneable local oscillator. I decided to build this unit and ordered a kit of parts from Krystal Kits.

The kit consists of the printed circuit board, potentiome-ters, ICs, resistors, capacitors, PVC pipe and end caps (used as an enclosure). I bought a 3-3/4" Radio Shack piezo tweeter (40-1382) for use as an ultrasonic microphone, and supplied my own IC sockets, as none were furnished.

This Krystal Kit is nothing like a Heathkit. There are no instructions, just a reprint of the magazine article with a few hand drawn corrections. Mechanical work, like laying out and drilling holes for the enclosure, remains the responsibility of the builder.

The printed circuit board eased construction, but was only of fair quality. There were extra splashes of copper, which required removal with an X-Acto knife. The holes for the mylar capacitors and several resistors were spaced too closely, forcing contorted bending of some component leads.

The oscillator was supposed to tune 15 kHz - 35 kHz, but mine would only tune 12 kHz - 21 kHz using the specified components. I substituted a 2200 ohm resistor for R5 (ori-ginally 15K) which expanded the tuning range to 15 kHz - 66 kHz.

Only young listeners can hear pure sounds near or above 20 kHz. Using my ultrasonic receiver, I have listened to sounds I could otherwise not hear from these emitters:

1. televisions
2. older ultrasonic TV remote control transmitter
3. computer terminals
4. video cassette recorder
5. metal detector searchcoil

Sound sources radiate almost equally well in all directions when the wavelength is large compared with the source. At higher frequencies, and smaller wavelengths, the radiation becomes more directional.

Although the receiver is sensitive, there are a few shortcomings: Moderately loud noises in the sonic range can leak through the receiver and be heard. Since the receiver is not shielded, it can detect some electromagnetic fields as well as acoustic signals.

In conventional radio receivers, the local oscillator gen-erates a fairly clean sinusoidal wave. By contrast, the

ultrasonic receiver uses a square wave oscillator, which produces strong harmonics. Thus, you can hear harmonics of the same sound at more than one place on the tuning dial.

I am awaiting the arrival of better weather so I can try listening for power line corona and the ultrasonic sounds emitted by insects.

Update

Several people have written for more information concerning the ultrasonic receiver I built. I bought a parts kit for my ultrasonic receiver from:

Krystal Kits
PO Box 445
Bentonville, Arkansas 72712

I paid $34.95 by personal check and it took over 4 weeks for the parts to arrive. Sorry, I don't have a telephone number for Krystal Kits. Their last PE advertisement appeared in the February 1989 issue. A Krystal Kits catalog is available for $1, although I requested and received a free catalog with my order.

The 4 page Popular Electronics article, "The Ultrasonic Receiver," was written by Charles D. Rakes, and perhaps Krystal Kits is his own company, but I don't know.

The new Popular Electronics, combined with Hand-On Electronics, is published by:

Gernsback Publications, Inc
500-B Bi-County Blvd.
Farmingdale, NY 11735
tel. (516)293-3000

Reprints of articles are available for $.50/page plus $1.25 shipping from:

Popular Electronics
Reprint Bookstore
P.O. Box 4079
Farmingdale, NY 11735

I am not affiliated with, nor have a financial interest in either of these companies.

Happy (ultrasonic) monitoring!

I tested a new SONY SC1PC scanner for Monitoring Times and
was impressed. If you've already seen one, you
know it's not a tiny scanner.

The one I measured was very sensitive through most of
its range (12 dB SINAD graph will be in the 8/98 review).
The audio was remarkably clear.

The software runs under Windows 95 and worked well.
The keypad sequences are complex and quite different
from other scanners.

The Service Search includes the usual bands, plus military air,
FM broadcast, and TV (VHF and UHF), so you can listen to
Jerry Springer :-)

It's nice to see a company selling a 25 - 1300 MHz no gap (exc.
cellular) scanner which actually performs well and comes
with *everything* you need, including cables, earphone,
AC power supply, PerCon FCC database, and control software.

I'm using a 12v 1A for my XLT9000.
Will this damage my scanner?

1243. 800 MHz reception problem

Newsgroup: rec.radio.scanner
Date: 1998-06-11 00:00:00 UTC
From: Mike Appenzeller <Michael.W.Appenzeller@lmco.com>
Message-ID: <358061BC.47EE@lmco.com>
Source record: 157579

I am having an unusual reception problem on the County-wide trunked system (Motorola) where I live. On all channels I am experiencing severe "flutter", similar to receiving a distant mobile signal , but this is on the repeater *output* freqs. Even the dispatchers & fire pagers all have this rapid flutter. It's as if the scanner was in a car going
65 MPH, but it's sitting on my workbench. 3 years ago I was living in a diffrent county, and had the same problem, they had a GE trunked system. I don't think anything's wrong with my radio, (760 XLT) I can receive cell-phone images without the flutter, and when the TV in the same room is on Ch. 68 the TV's local oscillator comes in steady on one of the trunking repeater output freqs. Any ideas on what's happening and possible solutions?

Thanks in advance

Mike

Are you sure?

>> Can it be fixed to receive these freqs?

Depends on date of manufacture.
I think only older ones can be modified.
I don't think new 9000's can be modified.
You may want to look for a used one .
Check out C. Crane company for details on the BC9000 Modification
video @ www.ccrain.com or call at 1-800-522-8863.

>> Is there a better scanner I should look at before I purchase this one?

Depends on what you want to listen to.
Do you need to have trunktracking capabilites?
If not, then there are lots of options.
The 9000 audio isn't that good IMO, but's a fast scanner.

Good luck

>> Thanks for the help Scott..

Just because you've lost loved ones does not necessarily mean that someone else who has also suffered this loss will feel exactly the same way you do. And wishing that upon them will make it even less so. You might as well summarily execute a member of every family, then saying "There, now you know how it feels just in case you feel like doing something wrong in the future."

> side note: in communities where the citizens are armed (concealed carry
> permitted), crime rates are pretty low. bad guys ("lawbreakers") don't
> know if they'll get busted when committing a crime. So to a certain degree
> vigilantiasm promotes civil behavior.

I haven't lived in a community where concealed weapons were legal. Then again, maybe I have and just didn't know it. But the fact that a majority of the communities in the US do not permit concealed weapons would seem to contradict the supposed benefits of your highly armed community.

> Is it being vigilante to ask that people drive within the confines of the
> law and common courtesy ??? anything that promotes that cause is fine in
> my book!

It is when you try to impose your sense of justice upon them that your actions become viewed as vigilantism. Buy an old cruiser and put a radar gun in it if you want, but don't try to pass off your actions as anything other than egocentricism. And your ending statement here just wreaks of an individual who would justify bombing an abortion clinc to "further" the cause. Anything is NOT fine.

> Now this is laughable, and a case of the pot calling the kettle black.

> advantage of 10 feet ? .. or be the first one stopped at the red light
> ahead (slamming on his brakes to stop right before it), or to get in
> front of the other guy in the toll booth lanes....

Nobody said that was ok, but it has little to do with purposely impeding the flow of traffic on the highways. If the other guy chooses to speed and weave, then put as much distance between yourself and the other guy as possible and concentrate on your driving. You're not going to stop him from doing it right there and then, nor should you try. Doing otherwise puts you at fault as well.

> Slow drivers don't rear end other cars and spin them around with enough
> force to roll over 4 times and or split in 2 pieces wrapped around a phone
> pole... The asshole doing 85 mph (thinking he's a superior driver), is a
> hell of a lot more dangerous than the dude doing the speed limit and being
> a courteous driver.

INATTENTIVE drivers! You keep trying to compare slow and fast drivers like it's the "end all be all" factor when it is the attention and skill of the drivers that's the main contributing factor to accidents. I see drivers everyday in the left lane doing the posted speed or less, then shoot across 3 lanes of traffic just before their exits. Or drive up the onramp at 35MPH and try to merge then speed up, all the while traffic behind is furiously braking because there was obviously not enough room to merge at that speed. And it's just plain scary when you see an inattentive SLOW driver almost force the semi in front of you off the road beacuse they can't stay in the lines. There are just as many slow drivers as fast drivers causing accidents, but the common denominator is not speed. It is the attention of the drivers and the speed of their reactions.

> yeah, the illness , is everyone feeling so self important, they have
> to be in such a hurry to get somewhere.

Still not the point. This is why we may never be rid of bad drivers on our roads. They are forever trying to shift the blame on others. There are ofcourse, situations that are impossible to avoid, but they sure as hell don't happen to me everyday. I may be close enough to see it, but I try my damnedest not to be in it.

> Defensive driving reinforces the fact that assholes are on the road!!
> it does nothing to address the problem of getting them off the road.

Back to training for everyone, but not just the ones that you think are bad drivers. If you'd prefer not to pay attention to the speeding driver that is approaching your rear, or the 55MPH die hard that you are approaching at 70MPH, until you're bumper to bumper, then that's your right I suppose. But in neither situations would you be considered a good driver. I'd prefer not to become a statistical point on someone's graph if there is anything I can do about it.

Bill Cheek wrote:
> You're not. <grin> The ECPA of 1986 makes it
> illegal to LISTEN to cellular signals.

Now, Bill...

No one says you CAN'T, just that you shouldn't...

Here's the deal Scott. Every time Joe Public uses his cell phone, his call is patched thru a repeater. A computer at that repeater site (or "cell") watches the signal strength of the call. As the call gets weaker (because Joe is walking/driving away from that "cell" site) the computer will automatically switch him to another repeater, operating on, of course, another frequency. Just before he goes, you'll hear a series of short buzzes. I'm not sure, but I think that this is the computer sending the new channel assignment to the phone. Then the phone replies back, and <poof!> Joe disappears, reappearing somewhere else in the spectrum.

There isn't any way for you to follow it, unless you were to write some software to read those buzzes and switch the scanner to the new frequency, like the phone does. Since, as Bill mentioned, the law says listening to cell is a no-no, then don't expect any such software or tracking devices to be available to guys like us anytime soon (Unless you're a programmer with LOTS of free time who doesn't mind working for free and sharing the program with no one.)

I'd say it's the best scanner you'll ever buy new for $99.95 if you can find one! I couldn't bear to put mine up for sale after I tried it out, so I put it in by my bed for those annoying nightime weather alerts - It has an alert mode that shuts down the display & sits there like it's shut completely off until the tone comes through! It is really sensitive, so an indoor antenna isn't so bad & I can listen during thunderstorms.
If you don't need trunk-tracking or computer control, it's a great scanner.

Mackey's fixation on Bill Cheek is like the son that must defeat the father in some form of combat. Since Bill keeps kicking Toilet Boy's butt every time he shows it, Toilet Boy has to keep trying to defeat Cheek. Only Mackey is too stupid to see his behavior as an act of futility.

> Bill cleans Mackey's clock every time and he keeps coming back for
> more.

Toilet Boy has no other source but this newsgroup for social intercourse.
Mackey is such a moron that he cannot see that he is the screwee and not the screwer.

> All Mackey does is copy posts and change the names and reposts them.

He is not intelligent enough to create anything on his own. Deep down he knows he is a buffoon and technically useless. He has to badger his superiors in order to validate his own existence due to his total lack of self esteem.

> Mackey... are you jealous of Bill?

Based on Toilet Boy's antics over the last few years, I would say yes, he is. But then, Toilet Boy is jealous of anyone who has more technical expertise that him, which is the rest of the planet.

> Are you so angry because people respect him and want to communicate
> with him and not you.

Again, based on watching the idiot Toilet Boy over the last few years, yes he is very angry. But, only at himself, and he takes it out on the people in the scanner newsgroups. Truly a pathetic specimen.

> Shame on you Mackey. Mackey... why don't you put more time into
> your other hobby ... masturbation. .

He has Nick to do that for him.

There are two versions of it. The SC1 is going for about $260
while the SC1PC (which included PC interface and FCC database
CD) goes for about $320.

Hi All,

At the end of last year there where posts about 9000xlt keypad tricks

(only 4 or 5 of them). But in the post there was a reference to more

tricks being translated from Japanese manuals.

Was that ever done?

Where can I find them?

Thank you very much!

Jeff

Bill's right. Mackey's a convenient pressure relief valve. I regularly play "Whack the Mackey" (And multiplayer "Quake", but that's another addiction I'm dealing with.) I couldn't figure out why I kept doing it. Loony boy has got this circular logic thing happening keeps him feeling combative no matter how badly he's losing the battle. But I kept playing "Whack the Mackey": I didn't know why. I just felt better for doing it.

Then Bill pointed out the reason: It's therapeutic. I can't remember his exact words, but they were somthin' akin to "When I get home, the wife gets a kiss, the kids gets a hug, dog gets a pat, and Mackey gets the rest: every friggin ounce of hostility and negativity that may have been accumulated during the work-day."

I realized; "that's why I do it!" This is *super*! My favorite NG comes standard with a complimentary and deserving idiot with which I can abuse as I choose. This feature allows me to channel all my hostility and frustration out of my real life into the life of Mackey.

It's not pretty. There's nothing noble about taking advantage of the handicapped. But what the hell; he's doing wonders from my disposition and now everyone in my *real* life thinks I'm one of the nicest guys in the world.

In was f�r einer ""ALARMZENTRALE"" sitzt du denn ??

und die jetzige Generation dieser
> Pager scheint mir in vielen Punkten genauso anf�llig.

Meinst du die Robustheit bei t�glichem Gebrauch ?? -> das sind die BOS-FME
doch etwas h�rter im nehmen.

> Bestes Beispiel, unsere Alarmzentrale ist selbst ein Funkloch (durch
> irgendwelche spezielle Verglasung, hab ich mir sagen lassen). Viele
> der eingesetzen BOSPager gehen schlicht und ergreifend nicht in diesem
> Raum,

Das Funkloch ist aber dann bedingt durch eine schlechte Funkversorgung in
diesem Bereich durch die entsprechende Relais-Station, mit dem eingesetzten
FME hat das nur wenig zu tun.

dennoch: mein Cityruf (!), bekannterma�en zivil&analog
> funktioniert immerhin in diesen R�umen bei jedem 2. page :-)

Zivil stimmt, n�mlich Telekom, aber analog, wohl kaum, Cityruf ist
POCSAG-Standard und damit digitale Technik.
Aber auch hier scheint entweder die Versorgung durch die Relais-Stelle
schlecht zu sein oder aber eure ""ALARMZENTRALE"" ist wirklich von der
Geb�udeseite relativ undurchdringbar f�r Funkwellen (Stahlbeton-Bauten
usw.)

> Ich denke mal es wird Zeit f�r 2-Wege-pager (wie in USA erh�tlich),
> die zumindest in der Lage sind, eine Empfangsbest�tigung iin

> irgendeiner Form zur�ckzusenden (z.B. als Status).

Das soll laut Aussage mal im TETRA- oder TETRAPOL-Netz m�glich werden
..aber ob das sinnvoll ist ?!

Einfacher ist es die Gebiete sinnvoll mit ausreichender Nutzfeldst�rke zur
FME / Pager-Asul�sung zu versorgen, so was l��t sich schlie�lcih ausmessen
und im Vorhinein planen.

Dieses w�re eine
> �berf�llige Erh�hung der Zuverl�ssigkeit und Vereinfachung f�r das

1278. FYI - Service Manuals from Radio Shack for scanners

Newsgroup: rec.radio.scanner
Date: 1998-06-11 00:00:00 UTC
From: smaynard@home.com
Message-ID: <3581b75e.167436198@news>
Source record: 157614
Cross-posted to: rec.radio.scanner,alt.radio.scanner

There was a rumor going around that RS does not sell service manuals for scanners anymore. Had something to do with the ECPA. This rumor is not true. I just purchased a manual for the Pro-2004 and Pro-2042 and receive them a few days ago. I called RS's 800# and gave them them the stock numbers for the radios and requested the service manuals. Altho, the manuals are about $23 apiece, up from 10 bucks a few years ago. The manuals are photocopies and are bound and fairly descent to read.

I had originally stopped by a Shack and tried to order the manual from the sales droid and the old hag told me it's not avail. I stopped by a few days later at the same Shack and talked to a different droid and they couldn't figue out the stock number for the scanners and told me to go home, look on the back of the scanner for the number, gave me his business card and told me to call him back. Instead, I got the numbers and called the 800# and ordered the manuals.

Those people are such boneheads!

Sam

Simpy put, SKYWARN is an organization of amateur
radio operators & REACT members who keep a lookout
for bad weather during favorable conditions of such
things as tornados and the like.

Sightings are relayed via amateur radio repeaters
as well as to NOAA stations for dissemination to
local TV and radio stations.

I would say for a more cost effective solution if you can do the
work yourself and that means installing and building the interface is
to look at the CE-232 from Bill Cheek

http://ourworld.compuserve.com/homepages/bcheek/

Great interface! And with the upcoming Pro-Turbo software that will
be comming out sometime in the fall or sooner(hopefully) it will run
under Windows95/NT.

Of course you will need a Radio Shack Pro-2004/5/6 Scanner which
covers from 25-512mhz and 760-1300mhz with some breaks for the cell
band, but that can be removed with just a diode change. These
scanners have 400(300 for the Pro2004 but 400 with another diode
change) but can be modified for more channels with some chips changes,
mine has 16 groups of 400 channels each.

Check out Bills books, for more info check out
http://ourworld.compuserve.com/homepages/bcheek/

The Uniden BC895XLT is a great scanner even if you don't give a hoot about TrunkTracking.

I bought mine from Communications Electronics, Inc. in Ann Arbor, Michigan. They advertise in PopComm. I've heard complaint from others about about CEI, but every place has a horror story, and I've never had a problem with them.

That presumes that you have a Radio Shack scanner like the models 2004/5/6, for example. There's also the Optoelectronics interfaces for the PRO2006/2035/42.

In fact, buy the 2042 on sale for $299 and the Opto OS535 for $200 and you have a combination that no one can beat for under $1000. Add to that the Programit interface for about $50 in parts and shareware and no one can come close for under $1500 or so.

That's my contention and I'm sticking to it.

If you want to track EDACS systems then you probably need to return the
2050 and find a scanner that can be computer controlled. Check out
http://web2.airmail.net/lblant1/dfw/digital.htm
You will find a program called E-Trunk that might do what you want to do.
You will have to have two 800MHz scanners for this to work though. Check
it out. Might help enlighten some options.

Yes - the features you list are ones I didn't know it even had! I bought it in April, and took it home, read the manual, and I was thinking to myself, "All this for $300?!?!".

I like the pc link and the auto-store, but I can't forget the frequency sort - I use them all the time.

allsafe wrote:

You're right - two good scanners (expensive, at least $375 usually, sometime $700) are the AOR 8000 and AOR 5000.

It was true, but a hue and cry from the public
prompted them to alter the policy to continue
selling current and older manuals; but NOT for
ny new 800 MHz scanners. So if an 800 MHz
scanner comes out today, ostensibly they won't
sell a service manual for it.

It can be quite safe as long as the power level is kept low (around
300 mW or less). After all, PCS phones work around 1.5 GHz. It's all
a matter of energy density. As long as the energy density is low, you
won't get much RF heating.

Of course, if you're talking about non-heating effects, keep in mind
that most of the research is far from conclusive and most of the
testing is extremely flawed. I've seen very little to convince me
that I should be concerned about anything but the heating effects.

An educated driver would not allow him/herself to get into that situation anyway. If you are not able or are unwilling to complete the pass before the flow of traffic catches up to you, then you have no business being in the left lane. Both are equally at fault in your example.

A "cop wannabe" does not make people do anything but laugh at him. If you want more people to be safe and obey traffic laws, then tell your law enforcement offices to stop wasting money on those super-concealed aero-packaged limos and put more BLACK&WHITE squad cars on the road! And hiding in the bushes drinking coffee while watching the radar gun does not count. Everytime I see a stranded motorist on the highway and a cruiser a few miles up or down the road running a trap, I just have to laugh at current state of law enforcement as it pertains to traffic.

Kermit wrote:

Now that's just plain bad taste. Wishing ill upon another person(s) simply because they don't aggree with your point of view. Regardless of how much you think their beliefs might change because of it, it does little to convey your point and paints yourself more as a vigilante, than a concerned citizen. And just so people know where I stand on the issue, I do exceed the speed limit where I consider it prudent. Taking the law into my own hands? You bet! Do I pretend that it is for a higher purpose? Hell no!

I put you into the same corner as the people who bought those radar emmiters which do nothing but shoot out spurious X and K band signals. An egomaniac hypocrite trying to hide their shortcommings under the guise of community service.

I see just as many inattentive slow drivers as I do fast ones everyday and both are just as likely to injur or kill others. Simply pointing the finger at speed is just treating the symptoms and not the illness. Education is much more effective a tool than intimidation, so you should worry more about teaching yourself and your family rather than try to run your neighbor's lives.

If you think it's so dangerous out there, then spend the money on defensive driving courses instead of a radar gun. I'd rather have the knowledge to avoid being in an accident, than have a radar gun and be the cause of it during evening rush-hour.

KuoH

John Mackey - KA0SSF <ka0ssf@parg.org> wrote:

You're off my Shit List for 12 more hours, Smacksie.

> Why do you do this?

Three reasons:

1. You want me to. (You LIKE it.)
2. You don't post on topic. (Ever)
3. You don't know a scanner from your arse.

> Several people on this NG have asked for these flames
> & attacks to END!

You and your alter-egos, sure. But you have a hard
time understanding that nothing said by you and/or
your alter-egos has any meaning or relevance to me.
You don't count for anything. You are a zero.

> Yet you chose to attack for ABSOLUTELY
> NO REASON! YOU WERE NOT PROVOKED AT ALL! THERE WAS
> NO REASON FOR YOUR ATTACK!

I wasn't talking *to* you. Are you feeling a
little guilty, maybe?

> I appears as though you WANT these problems to occur!

What problems? I don't see any problems. Problems
are when you cry, snivel, lie, cheat, etc. Me, I
laugh at you all the time. Laughing isn't a problem.
Laughing is good for the soul. What problems are
you talking about, Smacksie?

> YOU seem to be trying to do what ever you can to
> continue the problems!

No. See the post I made yesterday TO you under the
following thread:

==========
Yo, Mackey? Front and center tuit suite!

==========

Read it and post your agreement in public. But just
in case you claim you didn't get it, here is the deal
once more. And you have 12 hours to accept it now. I
am not going to get into dialogs with you. You are the
epitome of the old saying, "..worthless as titties on
a boar hog", so let's get this show on the road:

1. You do NOT (ever) speak to or write to me.

2. You do NOT (ever) speak to or about me.

3. You do NOT (ever) make any references to me.

4. You do NOT (ever) make insinuations about or
allusions to me.

5. You do NOT (ever) think about me.

6. You play like I never even existed... to the fullest
extent.

It's not negotiable. It's not discussable. Just accept
it or reject it. The same provisions apply to me with
respect to you. Your public acceptance of it binds me
as well as you. I wouldn't have posted it otherwise.

No more dealing. No more conversation. Put up or shut up.

Capiche?

Yo Smacksie?

Hey wingnut, I hear you want another "deal"?
You friggin' ninny, we *had* a deal. You broke it.
But it's the ONLY one I will ever make with you.

Okay, you are off my Shit List for 12 more hours,
plentylong enough for you to read the below and agree.
Then back on my list you go.

Now read it again, Oh Mindless One:

1. You do NOT (ever) speak to or write to me.

2. You do NOT (ever) speak to or about me.

3. You do NOT (ever) make any references to me.

4. You do NOT (ever) make insinuations about or
allusions to me.

5. You do NOT (ever) think about me.

6. You play like I never even existed... to the fullest
extent.

And you will get *exactly* the same from me. No more.
No less. I ignore you; walk around you; or step over
you like a steaming pile. Actually, I'd hire a helicopter
to fly me over you if it came down to that.

No more. No less. Deal?

Don't offer ANY other terms; don't remove any; don't
make any alterations to the above. I will not
negotiate with you, and there will be no compromises
or bending. We will NOT discuss it. I want no
interaction with you of ANY nature whatsoever.

Just reply to this post quoting Items 1-6 and state
that you accept the deal, no if's, and's, or's, or but's.

Publicly accept the above as an iron-clad, two-way contract,
or else sachet and swish to "Dixie" as you change the bed
pans at that state looney tunes hospital where you work.

Makes me no nevermind what the hell you do. But you
want a deal? Take this one or leave it. That's as good
as it gets.

Thank you Fred for your on-topic contribution about scanning. It is seldom that anyone posts here with the same level of intelligence and wit that you display with this magnificent posting. It was indeed worth starting a thread to expound on your views. Surely, you are a man among all men-- and women too, for that matter.

>accomodate 85 MPH traffic, I expect to be able to use it as such.;

Hey, other people pay taxes to, they have a right to drive in peace
without jerks riding their rear bumper in the right hand lane, or
weaving in and out of lanes just because they want to be first in line
stopped at the red light ahead.

I pay taxes to, so does that mean I can go out and paint artwork on
the highway, or take a piss on the side of the road ?

>Any guy who wants to slow people down by deception
>is a real jerk,

Seems to me the real jerks are the boneheads who think they're more important
than the rest of us common schlubs and feel a need to be first in line, or
get to a toll both 30 seconds ahead of the next guy.

Fucking mellow out, and just drive courteously.... geezus fucking christ.
What we really need is the state seizing the cars of jerks like you who
want to run roughshod over the rights of other drivers by zooming up their
ass at 85 mph. You dudes have a serious problem with this 'macho' shit.

>and just like the cops in unmarked cars, tend to cause a
>driving hazard by creating bumper-bumper traffic where there never would have
>been.

Why is that ? maybe cause the drivers are suddenly "LAW ABIDING" and driving
safely ? They suddenly become saints, signalling, not tailgating, not cutting
off other drivers.... yepper, can't have that shit going on... we need more
people doing 90 mph, giving each other the finger, shooting at one another,
and who knows what else.

I used to love working on cars and driving them, now it's just a fucking
job. Can't even drive in peace on the highways without the boneheads raising
my blood pressure to the point where I want to use the shotgun inside the
patrol cars I work on.

1315. Sony Scanner?

Ryan Faricy <jtonsa@nospam.worldnet.att.net> wrote:

> That would be "tout de suite", Bill.

Sorry, but no, it would not; at least not in the
vernacular and context by which it has been used
as an expression in the United States for the
last 35+ years.

> It is French for "soon", "right away", "in haste".

Perhaps, though "post haste" is the most correct
and literal translation, but the etymology is not
important. Common usage sets the relative importance.
You will find a verbatim example as follows:

" Time to leave town, tuit suite!!! "

located at the following Web sites, one a university:

http://hubcap.clemson.edu/~akluge/days/summary/1997/may12-16.htm

http://dustin.simplenet.com/days/summaries/may97.html

And if you want to get down to brass tacks over the
matter, you will find "toot sweet" to be in common
use as well. In any event, the English application
of the expression does not include the "de" connector,
and I've never seen it as "tout suite". Common
usage in the United States is ... as I expressed it.

I am reminded of my butt-ugly English teacher in
the 9th grade of some 38 years ago....who literally
punished us for using the word, "ain't". But as
a writer, I'll use "ain't" anytime I want, and ain't
nobody gonna stop me. <g> For one thing, "ain't" has
survived the test of time. It *is* technically acceptable,
and has been since at least 1974 according to
Merriam-Webster's dictionary.

Likewise, "tuit suite" has been in common colloquial
use since at least 1963 when I heard and saw it that
way for the first time. It doesn't matter if the French
say it is incorrect. That would matter ONLY in France.

And there is another issue.....forum. The forum of
a communique sets the rules, too. Ferinstance, I
would not use "ain't" or "tuit suite" in a formal class
paper nor even in a scientific paper. But when we speak,
especially in informal gatherings like this one, there
are no rules.

When you consider the extreme diversity of backgrounds,
languages, dialects, and even levels of intelligence in
forums like this one, the ONLY thing that matters is the
thought or idea or question, and if it can be understood
by others.

YOU UNDERSTOOD, and that was quite sufficient. Now
clearly, though, I failed miserably because the militant,
bucktoothed, booger-picking hermaphrodite, Smacksie, did
not appear tuit suite in this thread as I intended. <gloom>

Oh....and don't criticize or correct your elders unless:

1. You are certain of your foundations and all the facts,

and

2. You FULLY understand that in doing so, you simultaneously
INVITE criticism and correction.

-=A preposition is a terrible thing to end a sentence with.=-

Remember that.

You don't understand. Smacksie is our mascot.
He's sort of like an orphan we've adopted so as
to give the poor fellow a place he can call home.

The poor sap has no cognitive faculties and would
otherwise be ignored and sent to oblivion anywhere
else. Here, we feed and nurture his primal needs.

It's just something you have to kind of get to
understand.....it's not intuitive at all.

Stick around for a while and you'll see.

:-)

Here we see Bill's real agenda peeking through. The fact is, he gets
cyber-gasms by starting and escalating flame wars. The only problem
is, he's not good enough at it to take it to a group designed for such
fun 'n' games, so he hangs out in techie groups where he can disrupt
and agitate without too much real opposition, and advertise his
business as a bonus.

I've been thru the same route you're going thru. Started with the
BC895XLT and then decided I needed a handheld version also. I watched
the Uniden website until a refurbished BC235XLT was available for $150
and got that. Works fine, although it came with two BP-120 batteries
(should have had BP-180s). I called Uniden and they sent the correct
batteries via 2-day UPS delivery. No complaints so far.

> something that you have never done and have always refused to do.

You seem to be trying to point a finger of guilt at me. You need to
know that when you point a finger at someone you have 3 fingers pointing
back at YOURSELF!

> The challenge is there for you going to do as you say. If youdon't post
> another off-topic message, I won't respond to it. Pretty simple, eh?

You have made this promise several times, I only hope you could start
to follow these words you speak!

Allsafe-

Did I ever say I wanted anything from YOU!

For some reason YOU seem to be accepting responsibility for
the subject matter I stated above. Why is that? Guilt perhaps?

Seriously dude, can you walk me through this determination? I'm not going to argue with you. I'm beyond that. I'm merely curious:

Can you tell me how you rationalized your response to that one line of text you quoted? I'm trying to trace your logic, but I'm coming up short. 'Cause when you look at that line:

> That's right, you're not getting anything you want from me.

mmmmmm...I dunno; the tone comes off as arrogant and hostile. I can't figure out how you inferred "guilt" or "accepting responsibility".

And that's not an exact quote of what I wrote,...is it John? You cut out the "loony boy" reference after "That's right," I think you ought of left that "loony boy" reference in there. It was an important part of that sentence. Its inclusion only heightens the arrogance and hostility of the message; not much room to read "guilt" or "acceptance of responsibility" in that line.

So tell me. How did you do it? How did your warped little brain leap to a conclusion of "guilt" or "acceptance of responsibility" from that one line?:

> That's right loony boy, you're not getting anything you want from me.

I'm just curious about your thought pattern.

You friggin' loon.

I've had a Tropez 900Mhz digital cordless for about 4 yrs now.
Great phone, no noise, still on original battery, plus digital security.

The REAL hilarious part of it all is that some of the worst
of the south ends of north-bound horses are those who do
NOT indulge in scanners and scanning for a hobby. To wit,
our gooooooood budddddies, Smacksie, Queenie, PjB, et al.
Think about it. <g> Ain't a one of 'em ever contributes
anything other than a little methane-hydrogen sulfide mix.

Damn succinct and well worded post, man. I couldn't have
said it better. I hope it gets framed and put at the
head of the list of Q&A in the newbie FAQ for this forum.

Nice job!

>like that in years.

I agree 100%. It has been a LONG time since I listened to cell phones and most of the time it was very boring, but I have heard some good ones. Once I heard a man giving his credit card info to reserve a motel room. If he only knew that anyone with a scanner could have gotten his name, number, exp. date, etc......oh well. Another time we picked up a couple breaking up. The guy was sitting in his car in frount of the girls house. She kept telling him to leave, but he refused. They were well into the conversation when we picked them up, and we listened for about an hour while driving around. I would have loved to see his cell phone bill for that month! Anyway as I said it has been a while since I listened to cell phones and I don't miss it a bit! It's not worth wasting time on, plus it's illegal! ;-)

Later all.

If you're willing to lose the 30-54 MHz band, yes.
Clip a leg of D-45.

You can probably switch the "cut" so as to have
both bandsm though you may have to turn the scanner
off before changing the switch setting.

Hello All! First time cruising this group,and if I was new to the Net/net news, I'd probably be timid about posting here...More like 'alt.scanner'.

At any rate, I'm located in Riverside, CA (county actually) and have listened for some time to Police/Sheriff freqs via a PRO-34. The Sheriff dept. is using trunked radios, and well, when the latest Radio Shack flyer came by with the PRO-2050 for $199, Father's day came early. Needless to say, having little to no knowledge of RF management via trunking radios, I've come to find out the Sheriff dept. uses Ericsson trunking. So, without breaking the wallet (Mama's still PO'd about the early Father's day) what kind of recommendation can anyone in the group make about tracking EDACS? I have plenty of computer at hand (as well as experience) and as I really look into this, should probably return the 2050 for something with acquisition and control features. Pretty illiterate with respect to RF, but not shy about digging in to find the facts and wield the soldering iron. Any suggestions, helpful info areas, etc., please send! TIA!

Yo Smacksie?

Hey wingnut, I hear you want another "deal"?
You friggin' ninny, we *had* a deal. You broke it.
But it's the ONLY one I will ever make with you.

Okay, you are off my Shit List for 24 hours, plenty
long enough for you to read the below and agree.
Then back on my list you go

Now read it again, Oh Mindless One:

1. You do NOT (ever) speak to or write to me.

2. You do NOT (ever) speak to or about me.

3. You do NOT (ever) make any references to me.

4. You do NOT (ever) make insinuations about or
allusions to me.

5. You do NOT (ever) think about me.

6. You play like I never even existed... to the fullest
extent.

And you will get *exactly* the same from me. No more.
No less. I ignore you; walk around you; or step over
you like a steaming pile. Actually, I'd hire a helicopter
to fly me over you if it came down to that.

No more. No less. Deal?

Don't offer ANY other terms; don't remove any; don't
make any alterations to the above. I will not
negotiate with you, and there will be no compromises
or bending. We will NOT discuss it. I want no
interaction with you of ANY nature whatsoever.

Just reply to this post quoting Items 1-6 and state
that you accept the deal, no if's, and's, or's, or but's.

Publicly accept the above as an iron-clad, two-way contract,
or else sachet and swish to "Dixie" as you change the bed
pans at that state looney tunes hospital where you work.

Makes me no nevermind what the hell you do. But you
want a deal? Take this one or leave it. That's as good
as it gets.

Capiche? Savvy? Comprende? Understand?

Good catch, Mike! The lightbar and cage posts were a parodical response to the out of control threads for the person who wanted a used radar gun (preferably hand held, if I recall). His ad said nothing about police or using the Radar on roadways. Posters just inferred this into the thread. I thought I'd have some fun with it! Good day to you all!

Cell phone freqs are blocked and can not be unblocked. The 9000xlt will not follow trunking. The type of best type of scanner depends on what you are going to listen to. If it's going to be 800 trunked systems then both Radio Shack and Uniden have trunk-trackers for that.

Good Luck,
Mike

No, the individual started the problem is YOU and the individual to contibues to cause the problem is YOU. Note that the single person for the last two days who has engaged in flames, lying and his usual distasteful activities is YOU. It is laughable that you would even imply that the flaming was caused by someone else when YOU are not only the instigator but also insanely bent on perpetuating it.

I am utterly convinced that you are in serious need of pyschiatric counseling.

>NO, I have no personal vendetta & I have NOT disrupted this NG!

Here you go again. Eight post in 24 hours and you continue to cause trouble.

>You seem to be trying to point a finger of guilt at me. You need to
>know that when you point a finger at someone you have 3 fingers pointing
>back at YOURSELF!

You're the one who keeps engaging in electronic stalking, personal vendettas, lying, impersonations, cancellations and similiar activities all with the singular purpose of disrutping this newsgroup.

Unlike you Quackerel, I don't claim to be an angel. If thre are only three fingers pointed at me, then that's not too bad.

You on the other hand have more fingers than can be counted pointed at YOU. You'll notice that aside from that vulgarian, fellow PARG thug Nick, you have never had a single word of support here.

>You have made this promise several times, I only hope you could start
>to follow these words you speak!

I have made the challenge at least three times and three times you have failed to accept it. It is the weakness of your moral character that hinders you from doing the right thing Quackie.

Yo Smacksie?

Too bad you didn't have the gumption and
intestinal fortitude to accept my deal.
It would've given you some character and
REAL polish...maybe made a man out of you.

Anyway, you're back on my Twit List again.
We can have a one way deal, at least. I
certainly won't be talking TO you, though
I have to admit that I won't be able to
stop laughing at you.

Every time the mere thought of you crosses my
mind, I go into a series of uncontrollable
giggles and titters. I'll have to say that
you do make my day. heh heh heh heh heh.....

One of the boys across the lab here just hollered
out, "Hey Bill, what are you snickering at now?"
(I told him it was just another nincompoop on the
scanner newsgroup.)

See ya - wouldn't wanna be ya.

(Activating the Twit List: Bzzzzzzaaaaaap!)

Fred,

If you stick around long enough, you`ll find that Bill Cheek is one of the BEST with scanner info. To be honest, I can`t recall ANYTHING other then a "That`s a nice scanner" from John Mackey.

If you can wade thru all the fertilizer to & from Mackey, You`ll get a healthy scanner crop from Bill.

IMHO, it would be a big mistake to kill-file Cheek.

Happy scanning,
Charlie

Too bad you didn't have enough sack to accept his 2 insignificant additions to your list.

Way to go, billie.

This just proves you are out to antagonize.

<snip arbitrary long-running flame>

I'm amazed. The topic is "scanners", a straightforward, technical subject, and yet people _still_ manage to pursue a long-running flame war. Abortion, gun control, Rush Limbaugh - sure...but _scanners_? Just amazing.

1403. Cellular on new Yaesu FT-50RD's

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: abtownes@hotmail.com
Message-ID: <6lruun$8on$1@nnrp1.dejanews.com>
Source record: 157331
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

Several people have complained that the well known
methods of doing hardware and software mods to enable
cellular on the Yaesu FT-50RD do not work on recently
manufactured units. Although I had one for a year now,
I did not mod it until recently because I found
that it was capable of good cell reception without
either type of mod. I wrote up a posting about half
a year ago, but it did not get much attention at the
time, since the mods were so popular. Now, perhaps
its time has come, so I repeat it here.

Al -------- Subject: Cellular RX on Yaesu FT-50R with no mods From:
abtownes@hotmail.comDate: 1998/01/01 Message-ID:
<883688921.1407975433@dejanews.com> Newsgroups:
rec.radio.amateur.equipment,rec.radio.scanner[More Headers] [Subscribe to
rec.radio.amateur.equipment] There have been various ways posted here to
achieve cellular reception on the Yaesu FT-50R. These include hardware
changes requiring careful disassembly and soldering, as well as software-only
changes using a hex editor on the ADMS files according to instructions
provided byIngra-Beton. There have also been instructions posted here for
getting this Yaesu to scan in steps needed for the cellular band plan. 30
KHz steps would be ideal, but the Yaesu offers only 15 KHz steps, and
withholds even those in UHF. A couple of postings here explained how to
store a VHF freq set up with 15 KHz steps and then recall it and change the
freq to the bottom of the cellular UHF band, and store it again. This keeps
the 15 KHz step size, even though it is for a freq range where the Yaesu does
not offer it. It was not actually necessary to store the VHF freq, but this
is a confusing procedure, and I give credit to its inventor even if he did
more steps than necessary. It was also suggested in postings here that one
can program a repeater offset of minus 45 MHz, to be stored with the 15 KHz
split. (and turn off ARS, function 5.) With this set up, one can hear a base
station which may or may not repeat the mobile, and with a single keystroke,
switch to the mobile frequency. It takes a good antenna, but you might
actually hear the mobile. It is the main purpose of this posting to show
that (1) neither the hardware nor the hex-edit mods are necessary for
cellular reception, and that (2) the tricks needed to enable the 15 KHz steps
(very tricky) and the 45 MHz offset can be done much more easily, and done
only once, directly in the ADMS software. The Yaesu FT-50R has the
interesting property that it can get cellular reception on images both above
and below the desired frequency (for example, 870 MHz, which is locked out).
The first IF is 45.1 MHz. Thus we should look for cell images on 960.2 MHz
and on 779.8 MHz. I turns out that both exist. This may seem illogical, but
all it means is that when we tune to 960.2, the HF oscillator is 45.1 MHz

below that, and when we tune to 779.8 MHz, the oscillator is 45.1 MHz above that. In both cases, we would hear a signal that was transmitted on 870. Nothing weird, we just got lucky that they did it this way. From my experience listening to this in Canada where it is legal, the Yaesu appears to have no image rejection in this freq. range, that is, no input filtering. Thus, it gets cellular reception on 960.2 as well as it would if you freebanded the set and tuned to 870. The 960 image is the better of the image choices because the Yaesu automatically uses the NFM detector in that range. If you listen in the 789 range, you must turn off the RMOD (function 31) that wants to use the WFM detector. After all, this is in the UHF TV range. You might also run into a real UHF TV station there. If anyone has freebanded an FT-50R, let me know how you think the 960 reception compares to the 870 reception and confirm what I found. Since all serious users of the FT-50R have the ADMS software, I give you here the procedure for programming the cell range in ADMS with the two trick features. If you do not have it, get the ADMS 1-D now. It covers all the radios that the 1-c covers and them some. It also introduces copy protection, but this has already been cracked. Load ADMS. Select a range memory from the data list, say L1. Go to the Edit screen. Put in 145 MHz as receive freq. Select step size of 15 KHz. Type in 45.000 for TX Shift. Change the 145 MHz to 961.1 MHz. The 15 KHz remains. Select the negative offset under the 961.100. You might have to go back and forth between + and - offsets a few times, but you can get it to bring up 916.100 MHz for transmit. Type in "CELL" in the Alpha Display and check Show. Or find a cute covert four-letter label. Do OK. Now Edit U1. All the same, but finish up with 973.1 MHz in receive. Do OK. Then, in the main ADMS screen, uncheck Automatic Repeated Shift. Otherwise there will be no 45 MHz offset when the scan leaves the limit edges. Also pick Scan Resume to be "Signal Drop". "5-Seconds" is a crazy mode of no use ever. It should be called Search and Sample. Save the file and load it to the Yaesu-50R. Scanning cellular is now as simple as recalling L1, tapping key-MR, and holding key-VFO for a few seconds. The Yaesu rescans the range when it reaches the upper limit. As you edit your freq. list over the years, this range need not be changed. The display shows that all of this works fine with tha antenna jack shorted. I cannot wait to visit Canada to try it for real. The 961.1 MHz setting is a carefully chosen freq. It is near the bottom of the base-station band, but above the data channels, and is divisible by 30 KHz with a remainder of 20 KHz. This is important because of the IF. If you chose to change it to include more range or whatever, consider the above requirement. To program a freebanded Yaesu, use 870.900 and 882.900 as the limits. These are divisible by 30 KHz with zero remainder, also important. As I have not tried this, please confirm that it works as I expect. Wishing everyone happy scanning when visiting a place where it is alllegal,Al

Hi,

I just got invited to go and see the Pocono race next Sunday.
I've seen post about scanners and Nascar before but payed little
attention to them.

1. What kind of headset do I need?
2. Does my Radio need modified (phone jack) to hear the cars?
I have a Radio shack Pro-51.
Can I use this radio?
Thanks

The most difficult part of monitoring CP is understanding their signal codes, if you are aware of what any are, let me know. If I had more time I could have probably figured out some more

Signal Codes

1 contact by telephone "signal 1 3109" "signal 1 mantis"
2 contact in person "signal 2 by magnum short enterance"
5
7 out of service
8 in service
14 "what is your 14?"
15 off duty? - "unit XX is signal 15"

17
20 location - "what is your 20?"
25 closed for the night?
33 (emergency?)
35
37 mechanical problem? - "signal 37 blue streak mechanical"
38 attraction closed? - "soak city complex is signal 38"
39 need approval to reopen? - "signal 39 demon drop"
80

1412. SCA decoder plans?

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: AJH <ajh@megsinet.n-t>
Message-ID: <6ls02o$8dm$1@news.megsinet.net>
Source record: 157340

Does anyone here have a text file on how to build an SCA decoder? I am very interested in this subject but cannot find a whole lot of information on it, any help would be appreciated.

How sad that things have come to this point. You will notice that
this week I offered BILL CHEEK TWO DIFFERENT truce options, yet
he apparently has declinde BOTH OFFERS.

You can use any headset with the appropriate adapter. Most are standard, however and should plug right in.
You can obtain the latest freqs right at the track. Look for the RaceScan trailer and you may purchase it there for $5.
BTW, did you know you can listen to the scanner at home. Check out www.racingaudio.com . They broadcast the scan from certain drivers each race over the internet.

Hope this helps
D-Boy

Yea, YOU were the only one appowed to post flames! Sure, that's
really setting the rules "straight".

> YOU got three warnings, peckerwood.

Yea right BIll! Actually, you gave me 2 warning is ONE day, hardly
enough time me to get the warnings & respond. Remember, net lag on
was typically 3 days. Your other warning to me was 2 days apart
from the other 2 on the same day. You have lied again Bill.

> > Bill would also flame people on the echo but kick off others

Why don't most scanners go down to the 27mgz? That way they could pick up CB radios.... I was just thinking how it would be nice to pick up the truckers on my scanner.....

I'm just curious as to why scanners dont start at around 20mgz?

Message-ID: <35819352.5522@mediaone.net>
Source record: 157356

Hi - Sorry if this post is in the wrong group but I figured somebody here can help. I have a Standard HX381 portable I have had for sometime now. I used to program it on an old IBM XT and have sinced upgraded to a Pentium 100MHZ laptop for my business. The problem I am having is that the radio takes a long time to read/program and finally gives up with an EEPROM error, sometimes it will get to 80%. I figure that maybe the computer is too fast to program the unit. Is there a utility to slow down the PC, if in fact this is the problem? I have since junked the old XT, so any help would be much appreciated!

Sure. You can do it, so long as you don't
mind 1/3 of the original signal available
to each scanner.

A 67% loss is pretty hefty, but not the
end of the world, so long as you know what
you're up against.

It's pretty hard to put a detailed schematic
and other graphics in a text file.

SCA is well covered in various publications,
but, of course, they're not free.

If you mean scrambling used on cordless phones, then just invert it back using the same inversion frequency. If you mean something else, the encryption unit basically changes some of the amplitude and pitch values (I'm just guessing here), which probably also messes up the receiver's detector, mixer, etc, which, in turn, produces an encrypted signal on a receiver not equipped to decrypt it.

Otherwise, let someone else reply if I didn't answer your enquiry.

Most AOR, Icom, top-of-the-line Unidens, and other scanners start at 1KHz or 5KHz (usually under 1MHz). The only Radio Shack scanners that have done this are one portable from last year or the year before, I believe (25-1300 MHz), and the top-line base scanners.

However, these are usually at least $300 (the AOR 8000 list price is about $700), and I've seen other receivers for over $5000.

But, in direct answer to your question, I have no idea why they don't include it. It would be nice. I guess the makers want to cut costs...

Try the little plugin thingy from RadioShack. It doesn't pick up TV signals very well but it is fun to experiment with. It actually picks up cordless phones better than my stock antenna, but that is only at my house. The effectiveness of this plugin antenna thingy varies widely.

Yup, what's happening is that you've depleted your hostility supply. Have you noticed that irksome people in real life don't bother you so much recently? Funny how that works, isn't it? I'm at the same level. I'm gonna take a breather for while myself.

Sometimes people from my *real* life catch me playing "Whack the Mackey". They want to know "why?" All I can say is:

"We all sit around our tree house and Mackey insists on showing up and sitting in the middle of the ring. (Even though he knows many of us don't like him.)"

"Then someone reaches over and delivers a sound "WHACK" to the back of Mackey's head to set him a squawkin', which in turn, produces a group giggle. Mirth subsides; a little scanner this,...scanner that....yada-yada, and WHACK! He squawks. Group Giggle. scanner-scanner-scanner.....WHACK! Squawk. giggle."

"Some days the club is grumpy; 'WHACK!WHACK!WHACK!WHACK!-oops, almost forgot: Scanner. WHACK!WHACK!WHACK!WHACK!WHACK!'"

"Other days the club is occupied: SCANNER?!!?!? Scanner: scannerscannerscanner Squa..WHACK! scannerscannerscannerscanner...."

So that's what I tell people. From their reactions (or lack of) I've deduced that as amusing as playing "Whack the Mackey" is; my marketing leaves something to be desired.

I drive an old Ford that looks kind of like the old big city detective units from the 1960's, and I have a snap-on police light bar with a couple of VHF 1/4 wave stingers mounted on it so I don't have to drill any holes in the roof. People sometimes do double takes on me as well.

> But....when I'm in the "cruiser", people go by me at 66mph (posted 65).

Amen to that. I absolutely detest the way people drive, and the one-finger salute that they are so proficient in waving when you crimp their style. I caught one of them at a stop light one day, walked up and knocked on his window, and he wouldn't even look me in the face.

At least he wasn't carrying a .357 S&W..

> Yea....it's a game to me. Keeps me amused on the way to work and home.

I know the feeling..

Mr. Alexander:
Yeah, it may have come out all wrong, but he does have a point. Admit it, you like riling up our favorite goofball as much as the rest of us do. It's fun to watch him piss and moan and cry for his mommy whilest we all kick him square in the poop-chute, huh?

I also had called for a cease-fire on this NG, but no one wanted to follow it, so to hell with it. Post about whatever you want, says I! This NG is just like TV or any other broadcast medium. You look at what you want to look at and 86 the rest of it. Simple. I kindof like this nonsense. It gives a Jerry Springer feel to the NG. ;-)

To all others reading this:

As long as Bill Cheek and John Mackey post to rec.radio.scanner, this is going to go on. And on, and on and on. You are not being forced to read these messages or post your own responses. So if you don't like it, goodbye, adios, sayonara, have a nice flight. We won't miss ya. And if you don't agree with me, then..... PTHTHTHTHTHTHTHTH!!!!!!!!!!!!!!!!!!
>:-P

-Phil

P.S. Too bad no one posts to alt.radio.scanner.flamefest. Then us Cheek vs. Mackey fans could watch the fun without having to sort through all those annoying scanner posts!! Ha Ha Ha Ha Ha Ha!!!!

Well, while you're at it, PLONK me in there too. Then stick your head back in the sand and say "I can't see it, so it doesn't exist" over and over and over.

In fact, following the policy you have outlined above, the only people you won't nuke are scanner newbies who don't know anything anyhow. Enjoy the view from behind your rose-colored glasses because, as you so correctly stated above, I could truly care less WHAT you do.

There are scanners that pick up CB.
Unidec BCT-7, 2500XLT, 3000XLT, 9000XLT.
Radio Shack has CB coverage in their top of the line home base
scanners. I'm not sure about the handhelds.
Also there are of scanners like AOR that will have CB band.

John Mackey - KA0SSF wrote:
> How sad that things have come to this point. You will notice that
> this week I offered BILL CHEEK TWO DIFFERENT truce options, yet
> he apparently has declinde BOTH OFFERS.

YOU ARE SO FULL OF CRAP!!!

What are you saying, that you're not man enough to ignore Bill when he says things like you were born without eyelids? How god-damned juvenile are you? So what if he calls you names?? Why don't you just chalk it up to him getting his jollies off of being a prick to you, and ignore the stupid flames? If you would try it just for a week, you'd realize you, all on your own, could have ended this b.s. years ago!!

Just be a man and admit the obvious truth: You like this crap, you thrive on it, and it sustains your only real reason for being here. Jesus, it's not the flaming that pisses me off, it's the fact that you are such a blatant friggin' hypocrite!

As to this Mackey vs Cheek crap, sure, I find it funny sometimes, but in my opinion, nothing is more immature than two grown men fighting over who has the last damned word. 4 billion years of evolution and we still carry on like little children:
"Did not!"
"Did too!"
"Did not!"
"Did too!"
"Did not!"
"Did too!"
"Did not!"
"Did too!"
"Did not!"
"Did too!"
"Did not!"
"Did too!"
"Did not!"
"Did too!"
...ad nauseum

If you're so much better than Cheek then prove it by acting like an adult for once. Otherwise, stop trying to force feed us your special brand of horsecrap, cause nobody is buying it. Your actions prove the opposite of everything you say.

Yeah, I'd say that's the only drawback to scanning - you hear almost
nothing but bad news...gets depressing sometimes. But then you hear the
call about the drunk woman running around naked talking to the bushes,
or the kid who hit the gas instead of the brakes and took out the fire
hydrant down the street (both calls I have personally heard) and it's
fun again.

Enjoy!

I have never tried the Opto board so I cannot compare them. The reason Ive never tried the Opto is I needed Autoprogramming (I travel alot). With the CE-232 I can download freqs for the city Im going to-Run them through APFtools or Magic and auto load them into one of 3 handhelds within minutes. Im a hobbyist and enjoy electronics and hacking radios. SO, the Ce 232 was not a problem for me to assemble. I had it in a radio and working in one day.(more like a few hours). The kit is so easy to assemble due to the way it is laid out. Also, Ive bought the kits during "sales" for as little as $139. Ive never seen the opto for under $199. Also the CE-232 can be assembled in a stand alone form so it can be used with numerous radios. I have 3 handhelds and 3 Pro 2006's which I can use with one CE-232. The scripting is an excellent function. It does take a little brain power to learn the scripting but what doesn't. When the Windows software for the CE-232 hits it will be the top system in my opinion. As it is the DOS version runs under WIN 95 in a DOS window. I read alot about the Opto and talked to the sales folks pushing it but for me the CE-232 won hands down. Ira Cooper

Does anyone know of a 900mhz digital phone that can work in vicinity with other phones and have a decent range? (i.e. through buildings, etc) somewhere in the range of about 30 of these phones at a maximum range of 3000 ft from base. Any suggestions would be appreciated...

Will you please lighten up? The person replying to your message probably missed the original message from the person claiming to have hit a police officer with a laser pointer. Since they wanted to reply to this message without having to go back and find the original one, they simply replied to your message and included the quoted copy of the original. They never actually said that they were talking to YOU. This is a very common occurrence on Usenet and most readers understand who these posters are referring to.

Also, please be aware that these messages are not read by all users of the Internet. Only a small percentage chooses to read this group.

About 15 years ago, before cell phones , when mobile phones were on VHF high band, there was a pimp in the city that had one in his car, there were only 2 mobile channels and i had an old 10 channel crystal scanner that i brought to work and put in the break room for everyone to listen to, wasn't long before everyone at work knew who all the johns were that were using his girls and when and where they were going to meet and all the going rates,
once a guy called and wanted two specific girls for the evening,
price was 100 per girl for the night, (very reasonable, considering this was 15 years ago) everyone at work knew the bar they were gonna meet at and half the place should up to see this guy pick up his two girls, they still talk about it to this day, happy scanning

>Like I said......people like you.

I was there, Bill. I saw what happened. Mackey has it basically
correct, although he adds his usual hyperbole to the tale. Fact is,
you abused your power. Anybody who's followed your posting habits
here will have no trouble believing that you did throw your weight
around in FIDO once you got yourself appointed moderator/dictator of
that conference.

>So here, even though there was an aspect of truth in what
>you said, your circular logic failed to communicate the
>WHOLE truth. You sure have a way of warping things to
>suit your own agenda, you zit-faced, bucktoothed nincompoop!

And you don't?

>Whaddya say about the deal, shitferbrains?

Whaddya say you just forget Mackey and your other detractors and just stick to the topic? That would take gonads, willpower, and integrity, and would show you to be the better man, wouldn't it?

The fact is that you won't do this, because you thrive on controversy and attention. If it weren't for Mackey, you'd find some other person on which to concentrate your attacks.

Don't be ridiculous. I have NO respect for Bill Cheek and his antics,
but reporting people to their ISPs for the childish behavior you see
here is just plain silly. Nobody's forcing you to read any of it.
Get a newsreader with good filters, and you won't have to see any of
Cheek, Mackey, or any of those who get cybergasms by flaming them.
You won't even have to read my posts unless you want to.

What happens when somebody complains to YOUR ISP about something YOU
wrote?

> my opinion, nothing is more immature than two grown men fighting over
> who has the last damned word. 4 billion years of evolution and we still
> carry on like little children:
> "Did not!"
> "Did too!"

I don't give a hang for who has the last word. I've
twitted him before and I twitted him again last night.
He'll have the last word ten times....you watch. And
then he'll catch on and shutup for a little while. If
things go well as they were, then he will sign on as
some newbie and take a pot shot at me.....and then cry
"foul" when I hose the dude back. That's Smacksie's
modus operandi.

> If you're so much better than Cheek then prove it

I'd love to see that....on any turf, including his own.
Heh heh heh heh.....

> by acting like an adult for once.

Again, no fair. You have to BE an adult before you
can act like one and get away with it.

> Otherwise, stop trying to force feed us your special
> brand of horsecrap, cause nobody is buying it. Your actions prove the
> opposite of everything you say.

Well, he's on his own again now. I twit listed the
dingleberry, and won't be seeing his posts. And in a
day or two when I launch another intense project, I'll
killfile all the known flame threads, too. More or less
like you told that Gurk dude....see no evil, hear no
evil, and speak no evil......

But that won't end it. You KNOW it won't. The main
reason being I booted Mackey's ass off FidoNet for the
same crap he pulls here.....and now he's duty and honor-
bound to even the score somehow.

But he hasn't been able to find the right combination.
So he grasps at straws........and shoots at anything
that moves hoping it's me.

As a side note, Smacksie reminds me of an old Tarzan
Doll. You know, wind 'im up and pitch 'im in the
"john" and watch 'im wrestle a turd. He's easier to
wind up than those dolls, though.......

Anyway.....I'm digging into another project and don't have
time for his shit anymore. He's a zero. Now's let's see
if he can forget all about me.

Bet?

:-)

When your newsreader downloads the daily traffic, just avoid clicking on subject lines that appear to contain material you find distasteful. rec.radio.scanner is an unmoderated NG and fairly popular. Flames and such are just a part of the price and and content of a unmoderated recreational NG.

Do you really think you'll succeed in pulling the plug on every poster you find distasteful?

Wouldn't it be just easier not to read posts you find distasteful?

I find the scanner related posts interesting and informative. I've used information from this group to enhance my hobby. But I'll let you in on a little secret. Some scanner related posts I don't read. That's a right, there's a couple of scanner related threads I don't find interesting. So sometimes I just let my little mouse cursor drift right over subject line. (TIP: You can actually move your mouse cursor over the distasteful subject line, and it won't hurt you. It's completely harmless. But if you "click" on it; and open the post (shudder) well.....who knows what will happen to you.)

But I'm concerned about this part of your post:

>>If I see any more of this FROM ANYONE, I will
>>be reporting them to the ISP. These are off-topic messages that have
>>been continuing for months. This is a SCANNER GROUP, not a FLAME
GROUP!

Perhaps you're used to a great deal of control in your "real" life; sock and underwear drawer in perfect order and all that. I have to warn you; the USENET is not a healthy place "champions of virtue who cross all their "t"'s and dot all their "i"s. You just might suffer a nervous break-down. Add that to your compulsion to "click" on distasteful messages no matter what their devastating effect they have on you and

.....well....that's a recipe for an unhappy life my friend.

Perhaps the plug you pull should be your own.

This is not a scanner. Basically in order to lose your scanner
you have to do two things:

1. Brag to the FCC/law enforcement that you listen to phones with
your equipment.

2. Anti-mobile scanner laws. (State dependent)

And I doubt most people on this group have done #1. I feel bad for
the victims of #2.....

1482. Help needed for tape recorder interface via scan control pin

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: "Jack T.Dragon" <tdragonn@blarg.net>
Message-ID: <358154B5.1431@blarg.net>
Source record: 157443
Cross-posted to:
alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I need some help with a tape recorder interface I'm building.
I'm trying to add a small jack to my scanner that'll plug
directly into a tape recorder's "remote" jack via a cable
that'll automatically start the tape recorder when the squelch
is broken and will stop it when the transmission stops.

If I use a RS 42-2152 dubbing cable, this'll condense a whole
night's, or even day's, scanning into just a few minutes. It'll
also have other useful purposes.

I know it has to do with the Scan Control pin, but how do I go
about doing this? I'm looking into it closing a relay when the
pin goes active so that the two devices will remain isolated.

I plan on doing this mod to several scanners, so general
instructions about how to do it with different battery sources,
different pins, etc., would be more than helpful for me and a
couple of friends.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,
tdragonn@blarg.net

1484. Florida, The State of

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: R J <randyj@mpinet.net>
Message-ID: <3581C132.2BF498E1@mpinet.net>
Source record: 157445

The State of Florida DIGITAL VOICE trunk system in the Orlando area.

It has been digital in the Miami area and is being installed throughout Florida.

Frequencies in MHz (minus 45 MHz input) Orlando area:

866.9375 .9625
867.4375 .4625 .9375 .9625
868.4375 sometimes trunk data
868.9375 sometimes trunk data

Possible future frequencies in the Orlando area:

866.4375 .4500 .4625 .4750 .4875 .9500 .9750 .9875
867.4500 .4750 .4875 .9875
868.4625 .4750 .4875 .9500 .9625 .9750 .9875

Trunk IDs (these are new and changing as they add services):
1024
1059
1027 my have changed by now
1088 my have changed by now
2376
14944
18368
18432

There is the Florida Sunshine open-Government law and no reason to consider public-safety radio traffic private from us citizens.

Especially State, County, or local Government public-safety services.

The Newer digital voice standards will eventually replace the old analog voice public-safety systems.

With knowledge of Federal Government communications before the FBI went digital in Memphis, TN in 1981 and remodernized their system in 1989 throughout Florida, it is understood why the FBI and other Federal agencies digital voice, in some cases, should be encrypted and suppose to be private.

Production of digital voice scanners should be allowed for sale to the public.

The United States of America almost 222 years old.

I am still testing it. I want to make sure I get ALL the bugs out this
time. I also need to get my own site up for it. The site will contain
all kinds of scanner stuff: a frequency database for California,
freeware programs, upcoming events and so on. I'm still shopping for an
ISP who can run Active Server Scripts at a decent monthly rate.

When it's available, this NG will be the FIRST to know. Did I mention
the best part?

-> The program is gonna be FREE!!! <-

Users will be on their own for a cable, since Enterdev handled that.
They're easy enough for even a moron like Emilio Goldstein to make. And
as with any software, it ain't gonna run on all machines. You wouldn't
believe the configurations some people run.... but since it is free,
this shouldn't be a problem. If you have a normal PC with an OPEN com
port(No modems or printers or mice or anything hooked up to the port,
folks), Win95 or NT (Maybe 98, I don't have it so I can't test) you
should be OK to run it.

And if you don't have Win95 or NT, don't despair - the DOS version will
be a reality at or around the same time. Interestingly enough, the DOS
version seems faster and more reliable than the Win95 version! Hmmph!
says I.

I should have the site up by the end of the month, or maybe early July.
Details to follow soon...

-Phil

1490. Encryption and Cellular jumps....

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: Ryan <ryanak@flash.net>
Message-ID: <3581DBE4.43025987@flash.net>
Source record: 157451

Anyone know where I could find info on Voice Encryption, and basically how the encryption works (the algorithm)? Or does anyone know where I can find out how to read and process the 'ticks' that occur before a cell phone changes to another frequency? I'm wondering because I am mediocre in programming, and would like (if possible) to write a software decoder... I would just hook the scanner up to the PC, and the sound would go through the PC, and I could have it decrypt voice decryption. Anyone know how the people who made the decrypter, got their info? They obviously know the algorithm. I have not talked with them, but I doubt they will give me the encryption method......

THANKS!

200' is well within the range of the base transmitter. A directional or beam antenna will provide gain which you do not need at such a close range. filters are normally used to reject signals. If you are using a scanner with an outside antenna, changing to a whip or rubber duck would reduce the reception range and possibly help keep the other phones from being received. Another method (for information only, I do not recommend it) is to tap the phone with a transmitter which transmit on another frequency outside the cordless phone band and monitor that frequency. Kits for this are readily available.

Who really implied that he was going to use it to listen to cops?
There are lots of uses for a speech inverter.... there are some hams
on 80 meters using frequency inversion.... even though it is illegal
for them to do so. I would love to be able to tune them in....

Moonman <moonman@telcomplus.net> wrote:

> which is the better system and why?

The Opto-456 is the better because it requires
little or no special skills to install and
setup and get operating. And 3rd party support
for it is pretty strong. And the stuff that it
does do is pretty awesome.

The CE-232 is the better, in the hands of those
who know a soldering iron from a tire iron, and
who know their way around a PC. Why? Because
the CE-232 is open-ended....meaning the User can
define WHAT he wants to do with it and then
create automated methods of doing it. One small
example is that the CE-232 can find ALL the "birdies"
in the scanner, and then automatically "reject"
them when in the SEARCH mode so's you never get
locked up on a birdie.

Not only that, but the CE-232 can AutoProgram the
scanner's memory banks after which the scanner can
run quite normally with or without the computer.
The OS-456 does not program the scanner's memory, and
otherwise, it offers nothing of value unless the PC
is attached and the software running.

Not only that, but the CE-232 has generic inputs and
outputs that can be made to do anything within wide
limits of reason. Ferinstance, its outputs could
control a burglar alarm and trigger a phone dialer or
key a transmitter based on what happens at the inputs.
Right....this has nothing to do with scanning, but
just as easily, it could. Hell, it could even start
your car in the morning based on a signal you send
it from the house via say a handitalkie.

Say there's a frequency that gets very little traffic
which makes it like watching paint dry to sit there and
monitor it. Well, you can set it up and go away, and
then when a "hit" comes along, an output can be triggered

to set off an alarm; or key a transmitter to send a notification
to you at a remote distance; or it could even shut itself
down in the event of surges or lightning activity.

In other words, if you can imagine something within
reason, then the CE-232 will let you make a way for
it to happen. It's open-ended. You could even make
a simple CdS sensor circuit that could make the scanner
do different things, depending on whether it's daytime
or night time.

Not only that, but the CE-232 has eight 8-bit Analog-to-
Digital converters on board....one of which can makes a
great (AutoLoggable) S-meter; another of which makes a
superb center-tune frequency error meter; and that leave
six more to your wildest imagination. In this case, the
A/D converters are computer-measured voltmeters that can
be defined as the operator wishes.

The list goes on and on..... BUT the CE-232 definitely
requires some operator involvement in the initial
construction, setup, and operation. So it's not for
everyone.

Also, FWIW, the OS-456 was developed and marketed by
one of the larger hobby radio companies, while the
CE-232 comes from one of the smallest.

Thus, there is no clear-cut and dried answer to your
question. It all depends..... but either one beats the
living snot out of a non-computer controlled scanner.
And neither one will make you unhappy so long as you're
suited for it in the first place. Hey, a Rolls Royce
in the hands of an Amish farmer is utterly worthless.
Likewise, a pitchfork in the hands of a yuppie.....

It all depends.....

Poor Mackey. The unfortunate sap was born
without eyelids.....a terrible birth defect.

But he made medical history when the doctors
grafted on pieces of his foreskin after the
circumcision....and Lo! It worked with
perfectly functional eyelids!

The only problem was that this didn't allow
for eyelashes. Not to worry. The doctors
waited until he reached puberty at which time
they grafted some carefully plucked pubic
hairs, clipped and trimmed for perfect lashes.

This may explain why Smacksie blinks a lot....

Also, nowadays when most folks take "No-Doze" to
stay awake nights, Smacksie takes.....you guessed it,
.....VIAGRA!

Yay Smacksie! Go get 'em, son.

>added on to take their lunches :)
>
Although there are loose standards out there like the traditional 10-code (where we got 10-4 from, etc.) and even the old 9-code, each locality inevitably has its own weird blend of codes and references. These usually have evolved over the years, just like a spoken language. Here in SLC, Utah, for instance, they use mostly 10-code, but still use some 9-code references and some old APCO codes like "code 4" (everything's OK) and "code 7" (lunch/dinner/meal).

To find out for sure, you'll have to listen a lot until you really understand the context, or you could also just call the agency up and ask them. I suspect like you do that it refers to lunch; the fact that "7" is part of it supports this idea, since it may have evolved out of the old APCO "code 7."

Some of the funnest things about listening is figuring out the puzzles of codes used by the agencies! Fire departments have even more odd and antiquated references than police agencies!

Have fun! -Alan

The Pro-90 and the 235XLT are identical, except for the name painted on the front. RadioShack sells the Pro-90 for $249 (sometimes on sale for $199) while Grove sells the 235XLT for the same price - $249. The difference? The 235XLT includes two battery packs and a cradle to charge both the radio and the spare at the same time. The Pro-90 only has one battery. Clearly, the 235XLT is the better buy, unless the Pro-90 happens to be on sale. Even then, a spare battery will cost $20 to $30 plus shipping, and you still won't have the cradle to charge both at once.

I give the Opto the thumbs up for a variety of reasons:
1) less expensive--$200 versus $250 (more for the assembled version)
2) requires no assembly--the CE requires some soldering skill
3) effortless to install--see number 2.
4) considerable software support that enables you to boost scanning speed, decode dtmf/ctcss tones, set up unlimited number of virtual scanning banks and much, much more. the CE has virtually no third-party software support and it requires you to learn scripting to use it fully.
5)no need to connect the Opto to your burglar alarm system (joke)

The sole advantage that I see to the CE device is that it will autopgrogram the scanner.

You can add that capability with the Programit interface for about $50 in parts and shareware fees, but you must assemble it yourself.

Hi,

I have one unit of ICOM R-7100 receiver for sale.
The rig covers from 25MHz to 2GHz continuous (including
800MHz band), all mode (USB/LSB/AM/Wide AM/FM/NFM/Wide FM),
with modification for buffered discriminator out, in good
condition, no scratches, non-smoker.

If interested, I can send you a picture of the
rig taken with a digital camera. Rig comes with JIM-75
wide-band pre-amp with switchable filters. This is one of
the better communications receivers ICOM has built.

Looking for around US$1000 but am open for
negotiations.

From: Chris <cp1snt@snet.net>
Message-ID: <35811F14.961B68C0@snet.net>
Source record: 157487

I'm a newbie and bought one because of reviews and ease of use. I don't trunk trak. One thing wrong is the earphone jack is going bad. I have to jiggle the plug to make it work :(I like it and enjoy using it. Id'e say I have a lot of fun but there is some pretty sad stuff I've overheard on that scanner.

1527. Re: Mackey isn't the problem on this NG.

Courageous, nothing. This is just the freakin' Usenet, for crying out loud. I just want to learn more about scanners, but only a few people on this NG actually seem to know something. :-(

1529. It's Another Quackie Day

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: malexder@aol.com
Message-ID: <1998061212595900.IAA17666@ladder03.news.aol.com>
Source record: 157490

Well, Quack Mack, youï¿½ve been having a fine ï¿½ol time havenï¿½t you? Since your return about a month ago, you have posted 183 off-topic messages, all of them flames. Itï¿½s looks like you totally went Wacko Quacko in the last 24 hours--you posted about 15 off-topic flames.

Despite your hypocritical calls for decorum in the newsgroup, you persist in engaging in those many PARG-thug-sponsored activities for which you have become quite well known (make that infamous). I had hoped that you would tire of engaging in flaming, personal vendettas, impersonations, lies, hypocrisy, censorship, distruptive and rude behavior and the rest of your usual tactics, but I guess thatï¿½s too much to ask from the Quackerel. You demand for the flames to stop, yet YOU are the leading instigator of this behavior. YOU condemn the activities of everyone else, yet refuse to make even a small concession and moderate YOUR behavior. The facts speak for themselves: 183 off-topic flames in about 30 days; you claim to have posted one on-topic message in that time, but I havenï¿½t managed to find it. That is an extraordinary signal to noise ratio!

Iï¿½m sure that tomorrow weï¿½ll have another Wackie Quackie Day. You are the best advertisement for what ails this newsgroup and every day you relentless make the point what your agenda is. Nothing you can say will diminish the truth that is so evident to everyone and that is you are merely a charlatan and a fraud.

Jeff <scanner@mail.accessus.net> wrote:

>At the end of last year there where posts about 9000xlt keypad tricks
>(only 4 or 5 of them). But in the post there was a reference to more
>tricks being translated from Japanese manuals.
>Was that ever done? Where can I find them?

Jeff,

Here's more information on the meaning of the DECORD label displayed
in BC9000XLT test mode.

You can hold and press 2, 9, and DELAY at the same time you power up
to get into test mode.

My BC9000XLTs display:

KEY: NULL
E-LCK: H DECORD: L

As part of the diagnostic test sequence, you can apply 5 vdc to
test point TP10 (after performing the 2, 9, DELAY sequence),
then the DECORD: H should change to DECORD: L

In other words, the DECORD indicates the logical state of TP10.

TP10 is connected to both:
- to the CPU DECODE input pin and
- to a CTCSS decoder pin whose voltage indicates
whether the CTCSS tone on the current signal matches
the CTCSS tone programmed for that channel.

Hope this helps.

What you are hearing is the simalcast transmitters off frequency. This happens a lot if the oscillators in the transmitters are not sync up to one standard and are allowed to drift.

For Sale: Yaesu FRG-9600 scanner/receiver

60 to 905 mHz, no blocks

AM/AMnarrow/FM/FMWide/USB/LSB

switchable tuning steps

compact

100 memories in 10 banks

VFO or memory tuning/scannig

Video convertor allows use of computer monitor to receive television broadcasts, incl. commercial/cable and amateur t.v.

excellent cosmetic, perfect electronic condition

includes ops manual, service manual, mobile mount (never been used mobile)

$375.00 plus ups

Thanks,

David, WA7ZYQ

To add to my previous message, "tout" means "all", and "suite" means "next", so NO, the literal or direct translation would not be "post haste" -- it would be "all next". "Post haste" is the conversational or idiomatic translation. Nevertheless, this phrase IS French, not English.

Maybe I'll come down to your level in saying, "HA HA, YOU'RE WRONG!! YOU'VE JUST BEEN CORRECTED BY A 15 YEAR OLD!! HA HA!".

You say not to end sentences with a preposition? You, <sarcasm>even such a grand person as yourself </sarcasm>, end sentences in this way.

To conclude, you don't tell me what to do. You have no position as an elder. I think some publicity went to your head - you think you can just piss people off all day. You know what? You're wrong.

1540. House wiring antenna

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: iss@ripco.com
Message-ID: <6lran5$u6$1@gail.ripco.com>
Source record: 157501

remember the ads for the device: "turn your house wiring into a giant TV antenna" ..?? Anybody know how to build one of these..??.. or if they are still sold, anywhere.??

I want to monitor a cordless phone (~44MHz) base within my own house... this by itself is no problem, but I want to reject the neighbor's phone, which is nearly as close as the target phone... the signal will be strong enough, I thought the house wiring idea may just work..???

Any comments are appreciated...

Rob.

malexder@aol.com (MAlexder) wrote:

> 1) less expensive--$200 versus $250 (more for the assembled version)

Assembled/tested, the CE-232 is $194.95 and has
been for a couple of years now.

> 4) considerable software support

A Windows program for the CE-232 is in the wind.....

> the CE has virtually no third-party software support and it
> requires you to learn scripting to use it fully.

It's supported by the PerCon FCC databases as well
as Scan Cat's "Magic" and Drummond's APFTools.... and
lots of scripts.

"Learning scripting" means two things:

1. knowing how to use a text editor like NOTEPAD.EXE
2. having a sheet in front of you with the 40 or so
script commands.

Piece of cake to write out a script to accomplish some
pretty great stuff. I should be testimony there....as I'm
no programmer. All I know of programming is that it comes
on radio and TV. <g>

> 5)no need to connect the Opto to your burglar alarm system (joke)

You mean nobody would want to steal it? <g>

> The sole advantage that I see to the CE device is that it
> will autopgrogram the scanner.

Ironically, THAT was my primary goal back in the days of
R&D and prototyping. Someone else piped in and suggested
that it could not only AutoProgram, but also acquire data
from the scanner and make decisions based on the data.

Here's another advantage....how's about remote control of
not only the main scanner.....but of a number of others?

Like a PRO-43? One CE-232 can support a number of scanners, and if a handheld, who wants to sit around and poke those teeny weeny keys with club fingers? You can control scanners from the PC's keyboard, too.

And now....we are liberating the eight A/D converters that are on-board the CE-232's microprocessor. I mentioned the ease of S-metering and Center-Tune metering. The implications of these two alone are bigger than I let on.

Ferinstance....relative signal strength and frequency error readings on a transmitter make up two excellent "fingerprint" characteristics. So you're listening to a frequency that is shared by 15 users. How do you tell them apart? IF and WHEN they identify, that's great. So you wait...and wait.....

However, signal strength and frequency resolution makes a mass of signals stand out like a sore thumb. You don't have to wait for the stations to I.D.

Interesting, the NFM Discriminator "curve" in the PRO-2004/5/6 is quite linear over frequency offsets of -10 kHz to + 10kHz, outputting an analog range of 6.06v to 1.39v, with 3.80v corresponding to center frequency. So you send that analog voltage to an A/D converter for 255 points of resolution over a 20 kHz span for the ability to resolve frequency errors of as little as 78 Hz......without any costly or sophisticated instrumentation.

The CE-232 offers a lot more than what meets the eye at a casual glance, but I'll be the first to agree that it isn't for everyone. The Opto units certainly hold their own.

Don't let it eat at you. Cheek will never admit he's wrong. Even when, as in this case, he clearly is. He's been like this in these groups for years now.

He just whips up a batch of mumbo-jumbo and touts "in my 900 years of experience....bla, bla, bla". All smoke and mirrors when he's dead wrong. Don't misunderstand me, the guy can offer some useful information (in his own arrogant way).

He may drag this thread to its knees, and will be 100% wrong throughout the whole deal. He'll never admit it, though.

We all know the flame war with Mackey will never die because Cheek won't let it die. His other, clearly antagonistic, post served absolutely no purpose other than to try and drag Mackey back out of the closet for another round of childish spewing.

It's his M.O.

I use a 12 AMP , DC Supply (12 Volts) and that fires up all my Scanners...ham Rigs (small Ht's) and a SWL , with room (power) to spare.

I found the supplied dc adpaters died after a while..I clipped the leads off the dead supplies that came with my scanners , and wired up the leads to the DC supply.

Works well , much better filtering.

Remember you can go " up " on a supply with DC , but not down , if you need 1 amp..you can use 12 AMPS as I did or more if you have the supply, with no probs ...really the dc supplies have overload Protection...etc..SO I found it better to use a dc supply than he supplied DC Adapters.

> >You need 13.8v rated at 700-mA or more.
>
> I'm using a 12v 1A for my XLT9000.
> Will this damage my scanner?

No. Current is a dependent variable.
Voltage is independent. The minimum
current drain is 700-mA at 13.8v, so the
supply needs to be rated at that minimum.
At 12v, the current might need to be a
little higher of a rating, say 800-mA,
so your 1-amp appears in good order.

I think it's just fine, though for long term
safety and health, I'd think a 13.8v regulated
supply to be the best bet. Regulated supplies
handle surges and transients better than
unregulated ones.

You're okay for the time being, though.

>Why does Mackey always attack Bill and come back for more.

I got kicked off the Fido firearms conference on the BBS about five or six years ago by a guy who must be Mackey's twin.

I forget the guy's name, but he was a real tyrant. Whereas a normal conference would be maybe 50-100 messages, his message list would be DOUBLE because as moderator, somehow he felt compelled to comment on or criticize every message.

I'm sure you know the type.

Anyway, I always figured it was probably because putting together all them Big Macs was driving him crazy, and his little fiefdom was his way of getting back at the world.

Yeah, I just closed the deal on mine for $150, shipping costs to
buyer. If I had known, I would have made it "MINT" by beating the
shit out of it.

Be sure to wire a low current, inline fuse in the lead of each
scanner, as close to the power supply as possible, to protect each
scanner in the event of a short circuit.

The factory wall warts are fused internally.

If you replace your wall wart with a 12 A supply and
don't fuse your power lead, you risk up to 12 A of
current "coursing through the veins" of any scanner
which develops a short.

That's why the (often optional) automobile DC power cords
are fused.

1571. Pro-46 Problem

Newsgroup: rec.radio.scanner
Date: 1998-06-12 00:00:00 UTC
From: jlayton@NOSPAMsd.cybernex.net
Message-ID: <6lq72u$810$1@news.cybernex.net>
Source record: 157532
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I recently acquired a used Pro-46 (date code 11A3) that has been skipping over active frequencies during scan mode.

For example, let's say I have a UHF frequency programmed in channel 1, another UHF frequency in channel 2, and a VHF-hi frequency in channel 3. In scan mode, if there is a transmission taking place on the VHF-hi frequency, the scanner will skip right over the channel instead of stopping. (The frequency and channel number do appear in the LCD window, it just doesn't stop on the VHF-hi frequency when the frequency is active.) The scanner works fine in manual mode, or when scanning ONLY frequencies in the same band. It's almost as if the scanner doesn't "stabilize" on frequency soon enough after switching bands in the scan mode.

I have only noticed it skipping over active VHF-hi frequencies programmed immediately after 2 or more UHF frequencies. It might also be happening with other bands too, but I haven't tried it. Anybody else with a Pro 46 noticed it skipping over active channels in scan mode?

> You're okay for the time being, though.

By the way, Bob Parnass pointed out in another
thread that it's wise to fuse the (+) line to
the scanner when using a non-standard power
supply....and I wholeheartedly agree.

It's cheap and easy with an in-line fuse
holder....and for most scanners, a 1-amp
fast-blow fuse will be just right. If the
scanner is heavily modified with extra
LED's and devices that draw current, then
1.5-amp or 2-amp fuses will be about right.

Worth a thought and the couple of bucks....

My "Mackey Tone and Cadence" detector went off as well. Back to your old tricks you friggin' loon? What happened? Did your current ISP notify you about possible cancellation of your account due to alleged TOS violations? You think you can squeeze in some rogue cancels before your ISP pulls the plug on you again?

Look, I don't want to see you lose your posting privileges. When you call inquiring about an account at your next ISP, try altering the sound of your voice and crumpling a piece of paper in front of the mouthpiece of the telephone. There's a chance they may not realize it's you.

You friggin loon.

Two reasons:

1. He's a masochist (it hurts soooo gooood!)
2. He's overly "sweet" on me. Somehow I represent
everything he ever wanted but couldn't ever get.

> Mackey... are you jealous of Bill?

Well, that too, yes.

> Are you so angry because people respect him and

Well......he's obscessed.....

> Shame on you Mackey. Mackey... why don't you put more time into
> your other hobby ... masturbation.

It's not a hobby. Last year he went down to the Portland
docks and got a job on a fishing boat as an Apprentice
Baiter. He learned quickly and in a few short weeks, he
was promoted to Journeyman Baiter. And then recently, he
attained the exalted position of Master Baiter. So you see,
it's his 'profession'. <g>

Uniden Bearcat 9000XLT - Keyboard tricks
(By Jeff Goldman, WA1UDB, with additional credits to Dave Rodriguez,
Jeff Zeman
and Bob Parnass)

By holding down the 2, 9 & DLY keys as you turn the 9000XLT on, you
enter a
sort of test mode. To do a "keycheck test" you can hit any key or turn
the VFO
knob either direction and the alpha display will tell you what key
you're
touching or which direction you're turning the VFO knob.
At this point, if you momentarily hit LOCK (to the right of the VFO
knob)
and one other button various things will happen:
LOCK & C - REPLACES ALL MEMORIES w/1300MHz and alpha-tags channels
1-250
with CH 00-249 in the display. Again, this will wipe out your memories!
LOCK & D - Checksum and Firmware Version Number.
LOCK & E - LCD Display Test.
LOCK & PROGRAM - Runs a short, continously-repeating demonstration
program
incorporated specifically for showing at the January, 1995, Consumer
Electronics Show in Las Vegas. It also sounds attention tones as the
message
scrolls on the display! (Note that the word "scanner" is spelled

"Scaner" in
the demo program; it was too late to change this booboo that originated
in
Japan.)
The last three tricks will not wipe out memory. Only LOCK/C will do
that.

Yesssssss! Any shrink will tell you that if it
takes a dry martini when you come home from work
to shake off the day's trials and tribulations,
then do it!

Likewise, if a masochist offers himself up to help
you dispel the creepy-crawlies of the day, then
hey....it's good for YOU and it's good for HIM.
And above all, it's good for the wife, kids, and hound.

By the way, the very WORST thing a sadist can do
to a masochist is.....NOTHING at all. BOTH get
really hurt that way. No sense in it!

You certainly are NOT familiar with me or the history of
BILL CHEEK!

When Bill Cheek became the moderator of a echo on Fido, it
had about 200+ messages a day on that echo. THEN Bill
initated his warped rules on the echo & kicked off
ANYONE who entered a post contrary to his opinion. Bill
would also flame people on the echo but kick off others
for lessor behavior. After a few months of Bill Cheek as
the moderator of the echo traffic was about 10-20 posts
per day.

> 6. You play like I never even existed... to the fullest
extent.
> And you will get *exactly* the same from me. No more.
> No less. I ignore you; walk around you;

We would need to add the following:

7. Post NO flames, nasty messages, or attacks.
8. Post NO advertisements for items which result in
personal gain.

> Publicly accept the above as an iron-clad, two-way contract,
> or else sachet and swish

I now offer this back to you, BILL. As YOU would need to do the
same as you suggest above.

> Does anyone know?

Yes. R215 is the cellular mod resistor. It
takes Pin 41 low (0v). So find a source of
+5v in the scanner and run a line from +5v
to Pin 41 via a 1-k resistor (for safety),
and voile! Illegal cellular. Well, illegal
IF you listen. And maybe illegal if you
actually do the mod. Better check with an
attorney first.

Outdated and slow? I find that hard to believe..... I get people
asking me if I've run across any for awhile... there still is a big
demand for that unit!

From my POV, its a matter of the unit's styling, operation, and
just plain good all around performance.

You are a lying sack of weasel offal, Smacksie. The MOST
that forum ever has was 50-60 posts a day.

> THEN Bill initated his warped rules on the echo & kicked off
> ANYONE who entered a post contrary to his opinion.

You are a lying sack of donkey dung, Smacksie. I
set straight rules about staying ON topic and
against flames and emotions. And then I usually
issued two warnings or more before giving 'em
the Size #13EE crosswise on their patooties.
YOU got three warnings, peckerwood.

> Bill would also flame people on the echo but kick off others
> for lessor behavior.

You are a lying sack of dung beetle manure, Smacksie.
I flamed no one and I kicked off ONLY people like YOU.
People who had no interest in scanners and scanning.
People who just had to be insultory and inflammatory.
Like I said......people like you.

> After a few months of Bill Cheek as the moderator of
> the echo traffic was about 10-20 posts per day.

Wellllll here now, you may have hit on a tiny element
of truth. But what you failed to tell the good forum,
Smacksie-poo, is that messaging traffic in ALL of FidoNet
dropped dramatically during that period .... as people
frogged onto the Internet and opted to stay. Fido is
now a shell of its former self, thanks to the Internet
and the undeniable fact that FidoNet was a lumbering
behemoth that couldn't make timely moves and turns.

FidoNet's rules (Policy 4) was designed to serve a much
smaller membership....circa the 80's, but between 1991
and 1995, it tripled in size and found itself bound by
old ways with old people and it couldn't act or react in

any time less than years.

So here, even though there was an aspect of truth in what you said, your circular logic failed to communicate the WHOLE truth. You sure have a way of warping things to suit your own agenda, you zit-faced, bucktoothed nincompoop!

Whaddya say about the deal, shitferbrains?

Best thing to do is just killfile the word "mackey" and "cheek" in
the subject headers. That way if they actually post something
relevant to scanners, you won't miss it. :)

It's probably Smacksie doing a little
casual forging. He does that now and again,
you know. He's gearing up for another period
of low-key, surreptitious, treacherous, vile,
vicious shenanigans

You'll notice how the tempo and intensity of
the flamefest is subsiding now? Well, that's
when Smacksie comes back in under various and
sundry bogus I.D.'s and stirs the pot.

Watch for some hitherto unknown newbies to pop
in over the next few weeks........ They won't
be here for scanners and scanning. And they
won't really be "new". You can tell..... <g>

It's a never-ending story, man.

> ce-232 or is it the same thing??

It's basically the same thing. The software is
the same. HB-232 v1.3 is the latest as seen on
the main operating screen. The board is slightly
different.

For the CE-232, we redid the layout of the board
to make it easier to get to the lesser known
user features such as the OutBytes, InBytes,
and Status Inputs.

Your older HB-232 board still has all those points,
but instead of easier access from the top of the
board, they're down on the solder side.

A new Windows program is coming out soon for the
CE/HB-232 that takes advantage of the eight 8-bit
A/D converters.

Do you have the manual that originally came with
the unit?

As I have stated here many times. For the money (under 300 bucks) after trying them all, the best for my money is the Channel Master "Monitenna" for 50 bucks with 50ft of RG6. If you can't find it, call Glenn at 650-573-1624 (Scanners Unlimited) and he can supply and ship it for you. I can at least guarantee you will be satisfied. The higher the better and if possible, get yourself a 8 or 10 foot hunk of Schedule 80 PVC pipe for the mast instead of the usual, as it will not reflect the signals and never rust. good luck.

This scanner also works for the *analog* phones at 902 - 928 MHz, too. But,
900MHz analog phones use a fairly wide bandwidth, so you'll hear a
considerable amount of distortion. Set the squelch as sensitive as possible.

Source record: 157119

It took until the mid-80s for Bearcat and Radio Shack just to drop the floor from 30 to 29MHz, allowing reception of 10-meter amateur FM. Here's my theory... The manufacturers hiostorically built "general coverage" receivers to handle everything under 30MHz, while "scanners" take care of the world above 30MHz. Manufacturers probably just said to themselves, "Want 27MHz? Get a general-coverage radio. Want Aircraft? Get a scanner."

Pay no attention to the fact that the scanner could get two more uses out of the AM detector -- CB and 10m amateur -- in addition to just aircraft.

I dismiss the "need too long of an antenna" theory, too. A Regency MX-7000, circa 1985, pulls in stations quite well using only the 30" stock whip.

Does anyone know if the Electra Bearcat 220 is a good scanner? How much is a working one worth complete with documentation?

1612. NiMH Batteries in IC-R10?

Newsgroup: rec.radio.scanner
Date: 1998-06-13 00:00:00 UTC
From: Dale Klotz <not@available.net>
Message-ID: <6lubva$10r$1@argentina.it.earthlink.net>
Source record: 157123
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Does anyone know if it is possible to use NiMH batteries like the NEXcell 1300 mAh AA's in the Icom
R10?

I suspect the R10 internal charger is not designed for NiMH so they would need to be charged in an
external unit.

In its day and time, it was. Not by today's
standards, though.

> How much is a working one worth complete with documentation?

Very few scanners have any potential for value
as they age. Most are like run-of-the-mill cars.
After a time, there isn't even a "blue book" value.

The Bearcat 220 is like that.....not worthless,
but no one will want it other than a rare collector,
and then only maybe.

So if you want to sell it, put a ridiculous price
on it for starters, and add "or best offer". Then
see what happens.... My guess is it's worth somewhere
betwixt $5 and $25.

In cases like that, where I have old, but functional
equipment, I like to give 'em away to deserving
neighborhood kids. You never can tell what will trip
a kid's trigger and propel 'im on to great and wonderful
experiences and adventures. In that light, it's worth
a million bucks to the right kid.

Sounds like hooey to me. According to KC5KTO's Radio Shack scanner
modification page, the PRO-2040 cannot be modified to receive the cellular
frequencies, and I've never seen any info. on the Net to indicate otherwise.
However, since the PRO-2040 has only a dual conversion scheme, the scanner
might be able to pick up cell phone images in the 800-900 MHz band.

> circa 1985, pulls in stations quite well using only the 30" stock whip.

Your theory is perfectly valid, but if true,
then it makes the manufacturers stupider than
I thought, in terms of being in tune with their
markets.

No question about it, the AM detector that's vital
for the aero bands requires only another electronic
switch and a few lines of code in the firmware to
implement 27-30 MHz coverage.

That's why I think the mfgrs see it as a way to
make more money from those who want it, and to
make more money from those who don't want it.

They can peddle a scanner with CB for more because
they can say it costs more. While they can peddle
a scanner without CB, but it costs more to take it out.

Circular logic, like others we know on this
newsgroup.

I have several full 800 scanners for sale. They are all in excellent to mint condition, and work beautifully. They have no scratches or problems with any of these radio. Reasonable offers are always considered!

AOR-1000XLT, 1000 channel scanners, with full coverage from 500khz-1300mhz. Also covers shortwave. Its in mint condition with the original manual, box, charger and nicads. $275

Pr0-39, 200 channels, modified for full 800 coverage. Its in excellent condition with the manual. $200

Pro-2006, modified for full 800 coverage. In excellent condition, with the original manual. $300 or best offer

Uniden 2500XLT, 400 channels. In mint condition, with the rechargeable battery pack + Charger. This radio does not have full 800 coverage, and cannot be modified. $175

>dollars to purchase the right kind of service monitor.

I understand this as I do have several service monitors in which
cell phones are easy to read.
As I understand things, the Feds couldn't use this approach for
other than informal local "spying".
The Fed mandates are more widespread than this. They want to find
your phone no matter where you are.
Thru software/hardware of the cell infrastructure they can do
this and even triangulate to a reasonable degree.
In so doing, they are involving themselves with the major cell
carriers to facilitate having Fed equipment linked to the cell
switches so they can monitor "at will".
I believe laws have been passed which force the cell carriers to
modify their equipment allowing the Feds' access.
As a sidenote, anyone having a two way pager can also be
triangulated because the pager sends back an acknowlegment when a
page is received.
On to cordless phones. I dont know where you live but cordless
phones are the norm here and all the other places I've lived. Just
take a listen to the 46/49 mhz area and the 900 mhz band and you'll
see there are more folks out there than you think using these. I
personally have overheard drug deals and other such sensitive
conversations over cordless phones.

Hypothetical Question:

A person you know is in need of immediate help; they're using a
'cordless phone' to contact the police. You happen to be monitoring
the 'cordless' freqs. on your scanner when you catch the call. You
listen and you realize that the person is talking to no one! This person
sounds frantic and keeps asking if anyone can hear them!
You take it upon yourself to call the police and give them the info on
what just transpired.

ARE YOU DOING SOMETHING ILLEGAL?

Isn't it only ILLEGAL if you use the information in any way that would
cause harm to another person, or aid a person or persons in the commission
a crime?

I serviced them in years past. In their day, they were a good scanner.
Still are, if you don't require tons of memory frequencies and 800MHz. I
still like them because they are simple to use. I still use my BC 200 (it's
predecessor.)

I doubt the 220 is worth much nowadays; maybe somewhere between $15 - 40,
depending on condition. When a scanner gets below a certain value, I either
keep it as a spare or give it away.

Smoky Mountains Region Scanner Mailing List

In an effort to assist scanner users in the region, I have created the Smoky Mountains Region Scanner (VOLscanner) Mailing list.

This list is for the discussion of radio scanners in the Smoky Mountains area of Tennessee, specifically Knox & Sevier counties. Including the cities of Knoxville, Sevierville, Pigeon Forge, Gatlinburg, Kodak, and Mascot. Sharing of information on local public safety and any other users of 2 way radios from frequencies to channel plans and more. Need help with getting information or have information to share? Please join the list to make monitoring in the area the best experience it can be! GO VOLS! ! !(Note: Discussions on monitoring of cordless & cellular phones is NOT WELCOME!)

Absolutely.

>I suspect the R10 internal charger is not designed for NiMH so they
>would need to be charged in an external unit.

The "internal charger" is usually nothing but a resistor to limit current
to C/16 or so with the supplied nicads. This is not inherently
incompatible with NiMH cells. The Quest/Ault/Harding/HydriMax overight wall
charger that is commonly sold with AA-size NiMH cells is no more
complicated than that (except for the addition of an LED to indicate that
current is flowing).

Actually I find the so called "off topic" posts quite informative,
particularly when they may kinda, sorta, almost touch on aviation, or at
least those who are, or want to become pilots.

I think they do a very good job of providing information as to who is/is
not, or will/will not become good pilots.

Flying requires a level headed think ahead approach.

Being able to ramain, or at least feeling of staying anomyous on the net
allows a persons true personality to come through and gives a view that
rarely shows in face to face contact in real life.

I used to find all the flames irksome, now I view them in a different light.

All you had to do was ask!

ARTICLE III - MEMBERSHIP
Membership shall consist of: Full or Associate and each my be granted Lifetime and/or Honorary status. Any new member must be nominated by a current member with a second nomination. Once the nomination has been made and seconded then a third member must accept the responsibility of sponsoring the prospective new member. The Membership Committee will have reviewed the application & make recomendation to the general membership. Then discussion of accepting the member will begin. This discussion will include the level of membership (full, associate, honorary, and lifetime). After discussion voting approval will be held. All new members will be required to complete a six month probationary period. The purpose of sponsoring is for the a current member to ensure the proper conduct, activities, and operation of the new member to be worthy of PARG membership and representation. The sponsor should intermittently meet and review as needed with the new member to discuss such issues.

1. Full Membership:
a. Must have a valid amateur radio license.
b. Meet the approval of the membership committee which is to be appointed by the President from the membership as he deems appropriate.
c. Each full member may hold elected office and shall carry one vote and may exercise this vote only in person and not by proxy.
d. A prospective member's request for full membership can not be approved if it would cause the percentage of PARG full members with ARRL membership to be below 65%.

2. Associate Membership:
a. Associate members may not hold elected office or but may serve on committees.
b. The purpose of Associate Membership is to provide a reserve force to supplement the active membership. Associate members are dedicated to the Team's principles and objectives, but cannot assume full membership responsibilities.
c. Associate members do not have voting privileges.

3. Honorary Membership
a. Honorary members shall be selected by a unanimous vote of a quorum at a board meeting and by a majority vote at a regular meeting, to honor any individual deemed deserving.
b. Honorary members may hold either a full or associate membership as approved by the board and membership.

4. Lifetime Membership
a. A member, Regular or Associate, in good standing, may be designated as a Lifetime member by the Executive Board.
b. Full Members are the only members to have voting rights. Only Full Members will hold elected office.

After watching this site for years, it never ceases to amaze me that Emilio has been making up these great fiction stories for years and, yet, there are still people that think he is serious. WAKE UP CALL::: Emilio writes these fiction stories to generate long threads of great discussion and it works great.

I personally think the guy is hilarious. Keep it up Emilio.

For everyone else - remember: FICTION.

Main Entry: fic&#65533;tion
Pronunciation: 'fik-sh&n
Function: noun
Etymology: Middle English ficcioun, from Middle French fiction, from Latin fiction-, fictio act of fashioning, fiction, from fingere to shape, fashion, feign -- more at DOUGH
Date: 14th century
1 a : something invented by the imagination or feigned; specifically : an invented story b : fictitious literature (as novels or short stories) c : a work of fiction; especially : NOVEL

In <3584ad18.13598357@news.alt.net> Gur_Znthf@gurcragntba.pbz (Doktor Tripp) writes:
>

>etc........ I'm just so god damned tired of reading day in and day
>out, what seemingly are to be adults making the most absolute of fools
>out of themselves. It gets to the point where one is embarrassed to
>think that you are part of the same species of life as these trolling
>fools.

What are you blabbering about?

What are you failing to think about?

What are you alluding to?

What embarrassment? To whom?
That is a reaction to something you do
to yourself. No one does it to you.
you choose to be embarrassed. It is
your emotional inferiority that makes
you "embarrassed" just as being guilty
is lame and stupid.

So...tell me

Who iin the hell forces you to read
what is obviously labelled in full view
for you not to read? you know before
you enter that the topic will be based
on what it is for.

no one is forcing you TO read. The group
does not give a damn if you read or not.
What is there is just there. That is the
reality of "NG"s" bub.

NG's exist to dispense what people think
about (in Mackey's case the inability to
think much past taking a dump and what is
still edible) for that moment in time.

Being upset that you are so stupid not to
be able to "see the signs" labelling the
road taken is your choosing. you choose
to go down this road and get upset at the
posters because you had a bad dump.

Grow up. get on with whatever will allow your
bowells to be freed and accept the newsgroup
for what it is:

a fixture of collected shit in all
flavors and shapes and smells. In
time shit will flower. Roses will
grow from it. shit is a very very
good fertilizer for the brain. You
learn so much by reading with an
open mind.

If Mackey had not posted we would not know how
fucked up he is. He's a witless zit upon
the lifeless tounge of a dead pig in the
swill of which found in.

Learn from what is posted.

You need to take a few refresher courses
in basic "to think"

really. Why not pray that mackey eats himself.

question mark.

Make it a religious foray into the world
of make-believe. Be one with the stupid.

pray. it will keep you quiet.

bill conduit
etc.

Thanks for the reply. I've been to RS and they have several splitters.
They mainly carry ones of 75ohm. Is this acceptable? I had heard that
scanners had 50 ohm antennas.

1681. The "Flame Wars"

Newsgroup: rec.radio.scanner
Date: 1998-06-13 00:00:00 UTC
From: James Tonsager and Ryan Faricy <jtonsa@worldnet.att.net>
Message-ID: <6lvath$314@bgtnsc03.worldnet.att.net>
Source record: 157241

First and most importantly, I apologize for my participation in the flame wars. I will [at least try to] refrain from posting any more replies that have something to do with flaming. I apologize especially to Charlie Dwenger, with whom I've made an enemy quickly (I don't even know him). I apologize also to Bill Cheek - he is intelligent (I've said it a lot) but blunt and sarcastic, which are not always good qualities to expose publicly. To others who may have been offended in any way by me, my apologies also. I don't want to make any "enemies" - I just want this group to be what it was created for; scanners.

The only reason I have been participating in the wars is I just wanted it stopped. That may sound contradictory, and yes, it is. I have actually contributed to the agitation. I've learned a lesson from this, a simple one: "don't contribute to an already established irritability". Being a 15 year old, this "moral" will be useful to me now and later in life.

Thank you - maybe we can somehow stop this, but I don't know.

1686. Re: Multiple Scanners on Single Antenna

Newsgroup: rec.radio.scanner
Date: 1998-06-13 00:00:00 UTC
From: John Habbinga <habbinga@wt.net>
Message-ID: <6lv9nr$i1v$1@news4.wt.net>
Source record: 157246

I set up a store display and hooked up about ten scanners to a single outdoor antenna and had no reception problems at all. I used a BNC adapter that had one male side (to plug into the scanner) and two female sides to connect the cables among the scanners and the antenna. I used very short cables that I made that were just long enough to reach the other scanners. You could use the BNC splitters like I did or you can use a television type splitter with the F connectors on it. The very slight mismatch in the impedance (50 & 75 ohm) should make very little difference. If there is any loss, it will be in having to use several adapters to get the correct connections.

Stridsberg makes quality splitters and some come with pre-amps to
overcome the splitting loss. Be advised that they aren't
particularly cheap though. For more info, try the ScanCat site

1700. REQ for scanner mod on pro-90

Newsgroup: rec.radio.scanner
Date: 1998-06-13 00:00:00 UTC
From: Jason Downey <downeyjl@clark.net>
Message-ID: <3582AD0B.50DF@clark.net>
Source record: 157260

Hi, all...

Just picked up the pro-90 trunktracker scanner. It's a great scanner, however - lacks one feature I'd like to get (not a requirement, would be nice to have)....to use the CB frequencies on the scanner. Can I modify this scanner to support the 26mhz and lower frequencies? Specifically, I'd like to have 26.185mhz as channel 19 to listen to the truckers & general interstate traffic. That's all I'd want to do. Otherwise, based on other equipment I've seen, this scanner is good....it's just that I'd like to be able to listen to the CB traffic too. Any details on this type of modification, please help. I hear that this model is similar to a Bearcat model mentioned before...so would any modifications for this bearcat model work on the pro-90? Any leads would be appreciated. If this is covered in a FAQ somewhere that I am overlooking, let me know. Otherwise, this should be considered good material for one...(?)

Email me or post directly here. I'll be checking in to see if there are any replies regarding this. Seems like alot of people are wondering about modifications. I'm just wondering about a specific TYPE of mod. And no, I don't give a crap about cell mods, I just want the CB traffic capability. There's got to be a way to modify it for this purpose.

Also, is this scanner suitable for EMWIN weather signal processing? I plan on purchasing other equipment for EMWIN processing, but if the trunktracker can handle the signal, then I guess all I have to get is the demodulator to process the data. EMWIN is just a project I am looking into for weather data, so this isn't much of a requirement either. Any insight on this part of scanner usage would be greatly appreciated.

Jason

That is interesting and there is no readily
apparent answer. Your best bet is to ask the
vendors and manufacturers directly, though each
will demur and sidestep by pointing out their
one or two offerings that do receive CB.

Therefore, do a little preliminary research first
and then pop the question along with the acknowledgement
of what they do offer. You might even mention that
you're not interested in THOSE scanners for whatever
reasons you can determine.

Even then, you're not likely to get a straight answer.
So I will tell you what I think.......

.....that they can get more money by bundling the CB
coverage in with higher model scanner. Just betwixt
thee and me and the doorpost, most scanners start at
30 MHz, and it would be no big deal to drop the coverage
another 10%. It might cost a buck more in several extra
parts, if that.

People are their own worst enemies. Your basic typical
dude traipses into Radio Schloque or Best Buy and notices
the scanner with CB coverage. But he ain't interested
in CB. So he asks how much for one just like it without
CB. I mean, the dude wants choices. So he gets 'em.

At a price and at a compromise.

Here's the real deal. If everyone held out and demanded
ONLY Radio Schloque's PRO-2042, the price on that puppy
would drop to a level on a par with their middle of the
line scanners.....easily in the low 200's. Maybe lower.

But no, hell no, folks gotta have choices, so sales on the 2042 drop to a fraction while others don't sell to their potential, and the result is 50% higher prices on everything.

But anyway, YOU ask and see if they conjure up some song and dance with fancy footwork. I'd be interested in what you find out.

But Bill, the agreement I proposed to you stated that
NEITHER of us would post flames or nasty messages. Why
is it that you could not accept such a deal for the BOTH
of us? Certainly that would have ended the flames you
mention above!

Bill, you need to understand that the problems start with
YOUR actions. YOU, BILL CHEEK, are the one who (by your
OWN ADMISSION) chose to "hose" the guy because YOU didn't
like his response. YOU, BILL CHEEK, are the one who started
teh turmoil several months ago with your bogus posts under
fake/alias name of "winradio" & a few other names. YOU,
BILL CHEEK, are the one who has been requested NOT to further
abuse this NG by posting other un-welcomed messages like
the commercial posts you made about 2 years ago.

THAT is why I made the suggested truce that YOU appear to
have declined, obviously because it would prevent you
from causing further problems & clearly show you as
responsible for them if you did cause any more problems.

> The thing is, he comes in under different accounts that
> seemingly give no clue to his real identity. So if I

While I do have a few different e-mail addresses, I ALWAYS
use my name & callsign so there could be no
identity confusion.

> Ooooooohhhhh, that would be cool to catch him on the
> Springer show and take off his head and spit tobacco
> juice down his neck. Ahhhhh, I can see it all now..

Bill, I have told you that I would meet you anywhere,
anytime (within reason) on any mutually agreeable
terms. Recently, I suggested Dayton but YOU declined.

I have two (wire) dipoles for sale. #1) 10-15-20 meter dipole with balun, insulators, 100' RG8 coax and two twenty foot masts for support. #2) 40 meter dipole with approx. 100 feet of RG58 coax, insulators, and twenty foot support. YOU TAKE DOWN - easy access for removal. $25 for both. WILL NOT SHIP - Western suburb of Chicago. Email response only if interested.

Done! Thanks for the reminder it will save time reading the news group. maybe someday the world will get lucky perchance mackey/cheek and friends will discover email. Then the rest of us won't be exposed to their junk mail, I can piss higher than you, ego trip everyone see how good I can spell while I come up with great ways to express myself so everyone sees my name on headers, while I get famous cause fame is all I really want..blah blah blah.

Daddy didn't listen so I'll make all the rest of the men in my world take notice of me. Lets see.. huh? I think I'll tell the same guy the same thing a hundred ways because it really doesn't matter if the same guy reads the same thing, all that really matters is that someone take my side so I sense they like me or don't like me and gee... if they don't like me I'll try to tell the different guy the same thing I tell all the guys that don't like me... the same thing, in a different way and maybe I'll get a whole new thread out of it so I can see who my friends are. blah blah blah.

Threads man! Much more important than scanners, don't you know?

Quack Mack babbled the following flame:

"What is very disappointing is a person so pathetic that when asked who he really is, still has to hide behind his screen name because he is such a coward."

In yet another post to this thread Quack Mack ranted:

"Several people on this NG have asked for these flames
& attacks to END! Yet you chose to attack for ABSOLUTELY
NO REASON! YOU WERE NOT PROVOKED AT ALL! THERE WAS NO REASON FOR YOUR ATTACK!"

"I appears as though you WANT these problems to occur!"

"YOU seem to be trying to do what ever you can to
continue the problems!"

So tell me Quackerel, how do you rationalize posting flames then blaming others for flaming all in a single thread? The hypocrisy is extraordinary but certainly what we have come to expect from an impotent mouth breather like you.

So what's the count now? 200 off-topic flames in 31 days, eh? You're a piece of work Quackie, a real piece of work.

>been for a couple of years now.
If you have a half assed stocked junk box you can home-brew your own
CE-232. I have $60 bucks Canadian tied up in mine. But if you had to
go out and buy everything you need, yea it would cost a lot more.
Seemed easy enough to install and most on here sound more than
capable to install one, after all if you get a OS456(which is a
stupid name as it won't work with the 2004) you have to install the
Programitt interface to auto program the scanner, and if you can do
that you can install the CE-232, after getting an OS456 and getting
all the parts for the Programmit you now have ex ceded the cost of a
CE-232.
If installed in an external box the CE-232 can be used on more than
one scanner, 6,400 channels in a Pro-2004/5/6 can be a real pain to
fingerpoke and 800 channels in a Pro-43 can be even worse
>
>> 4) considerable software support
The upcoming Windows software(Pro-Turbo) is going to be a Great
addition to a GREAT interface.

thankx for all the tips...

I realize these "house wiring" units were a ripoff for the purpose they were sold... I STILL think one may work for the purpose which I want: to monitor a cordless phone (scan 25 channels ~44MHz) that is plugged into my house wiring... I need to ELIMINATE the neighbors' phone... which is nearly as strong a signal as the target phone... a little static is acceptable... it's better than NO signal at all.

it may not work... but I'm willing to give it a try... if anybody has seen one of these anywhere... better yet, knows how to BUILD one for a couple bucks... drop me a line....

thankx again.... Rob

You have got to be the biggest moron that has ever walked the face of the earth! You dummy!

First off like other have said before me you are bloody damn lucky that the police officer didn't kill you! If it had been me I wouldn't have called for back up I would have found out where you were and had little counseling session with my night stick. Hopefully swating you but enough time would put your brains back into allignment!

Secondly and as important if not more. You and other dummies like you are on of the reason's that restrictive scanner laws are written and passed. You m,ay have just given more ammunition to the let's ban scanners activist in congress! Jesus! why can't people use their toys in a responsible sane manner!

Do a followup and lookup on Cobra CB Radios. Dynascan
used to handle them, too, but may have changed names
and addresses over the years. Who ever does Cobra CB
now is the best bet to support that old SR-15, but
frankly 5-yrs of after -sale support is about all you
can hope for. And that SR-15 dates back to the 80's.

You may have to disassemble that old battery pack
and replace the cells inside of it yourself, so
don't throw it away.

> Right now, it's a 3 legged blob of plastic. Can anybody out there help ?

It's a TK11750, a 3-port regulator with 7.5v in and
5 volts out. Facing the numbers, leads down, the
left pin in IN; middle is ground; right is OUT.

It can probably be replaced by most any 3-port
regulator, but it appears to be of the low-loss
CMOS variety, so a direct replacement is probably
the best bet to keep things stock.

CMOS regulators have lower conversion loss than the
regular kind, and draw less current for internal
operations.

well... the antenna for the shortwave (under 27 MHz ?) should be very
long... i doubt rubber duck will do a job. maybe that's why.

For 40-50 MHz and decent performance elsewhere,
Radio Schloque's #20-014 is probably the best.

I was wondering why most scanners don't come with video screens so I could watch TV! If they had a dish, I would also watch satellite programming or get weather pictures. Heck, if they had wheels and an engine, I wouldn't have to worry about having a mobile scanner, because it would then be a scanner-mobile!

I can tell you why. That would end him forever.
He has no intention of being "ended".

What he wants to do is bind me into a corner
where he can come out under a nomme de plume
and hassle the shit out of me, and then claim
I broke the contract when I hose 'im back.

In other words, he doesn't want me to have
any freedom of response to snotwads like himself.
So he wants it written into the "rules" that
I can't flame anyone regardless of any reason.

No, I won't buy that. Fact is, I won't ever flame
anyone first. That is etched into stone. It is
not so etched that I won't respond in kind......

I don't let others speak for me and I don't speak
for others, so what he wants, he ain't gonna get.
Which is HIS excuse for not agreeing to the simple
deal I offered him. I can ignore the sonofab****
until the cows come home.....which just galds the
bile out of his liver. He _can't_ ignore me for very
long and doesn't want to be bound into a position
where he has to.

That's the issue. Otherwise, why wouldn't he accept
the ironclad, unilateral deal I laid on 'im?

heh heh heh heh heh.......

I was curious to know if anyone out there in scanner land had any RI frequencies.

I just bought the Police Call 1998... and there was no section there for RI......

If you can help....thank you in advance.....
Rock on, Stay safe, Take care, Kick ass.....

Joe

> > says things like you were born without eyelids?

No, I couldn't care less! His eyelids story was funny the first
or second time he posted it. But he posts the exact same
story about once every 2 months, obviously showing a total
lack of imagination & a total lack of desire to maintain on
topic posts on this NG.

> But it's
> my very existence that trips his trigger and fluffs his
> skirts. Geez, I'm not quite ready to check out just yet....

No Bill. Actually, I think your method of existance is
quite pathetic! My only problem with you is when you use
this newgroup for your showcase of flaming & abusing
people. THAT is when I take action towards YOU!

> Again, no fair. You have to BE an adult before you
> can act like one and get away with it.

Is this your excuse Bill, stating that you are not an
adult?

> > Otherwise, stop trying to force feed us your special
> > brand of horsecrap, cause nobody is buying it. Your actions prove the
> > opposite of everything you say.

THIS was an EXCELLENT response directed towards BILL CHEEK!

> reason being I booted Mackey's ass off FidoNet for the

WRONG BILL, I was NEVER booted off of Fidonet by YOU or anyone
else!

Try:

Atlantic Ham Radio - Toronto: www.interlog.com/~ahr/
Norham Radio - Toronto: www.norham.com
Durham Radio - Oshawa (east end of Toronto): http://www.durhamradio.ca/

Since I am in the Toronto area I know these best. I have used Atlantic Ham Radio (most of them are Hams but they understand SWL and Scanning as well). I have heard even better things about Norham but I havent been there myself. Durham hosts the Ontario DX Association web pages which also caters to SWL,Hams and Scanner enthusiasts so I expect they are knowledgeable as well. Unlike the U.S we dont have many options outside of Radio Shack but the stores that exist specialize in HF,VHF,UHF radio only.

So *that's* how he does it. I missed that angle. During one of his stints in your "twit filter" I remember him squawking that you had been recently "causing trouble" after I whacked him for "Cheek-obsessing" even though you hadn't posted a direct "Mackey-attack" for weeks.

You must have been a few threads over, whacking Mackey while he was wearing his funny nose and glasses. I missed it because you were bound by agreement not to write "Mackey"; I assumed they were "one-liner newbie slaps" and cruised right over the subject lines without opening the messages. (Even self censorship has it's pitfalls).

Jeeez,....that means no-one knows the how high a number of posts that friggin loon puts up there in a day. His raving post-per-day count under his "Mackey" handle is high enough to clinically diagnose him as delusional. The actual number may make him a desirable Jerry Springer guest.

One dreary Sunday morning in November I caught three dispatches for
"successful" suicides in my area plus an attempted one. Who says weather
doesnt influence humans? But interspersed with that was some amusing public
transit security dispatches detailing some fare disputes. Got some detail
on them and the reasons for the disputes were very amusing. There are good
and bad days. Weekends are always fun on the police channels. Occasionally
the professionalism breaks down though not often.

> So *that's* how he does it. I missed that angle.

It was the "WiNRADiO" angle. I made a post. Some
unstable sort came out all snotty and rancorous, so
I hosed 'im back. Mackey then tried to use THAT as
me breaking the deal, and used that as an excuse to
come swishing and sacheting back into the center ring.

That's why I made it perfectly clear this time, though
I did last time too, that it was just him and me.
And Ohhhhhhh Nooooo, that won't do. Since he can't
post anything but lies and flames, usually about me,
he'd have nothing to do.

> During one of his stints in your "twit filter" I remember
> him squawking that you had been recently "causing trouble"

Ummmm hummmm, that's probably when he went looking for
an excuse to "come out" again.

> You must have been a few threads over, whacking Mackey
> while he was wearing his funny nose and glasses.

The thing is, he comes in under different accounts that
seemingly give no clue to his real identity. So if I
whacked his arse, it was unbeknownst to me. Of course,
even under the nomme de plume, he couldn't help himself
enough to avoid losing control. So he "came out".....

> Jeeez,....that means no-one knows the how high a number of posts that

Ooooooohhhhh, that would be cool to catch him on the
Springer show and take off his head and spit tobacco

juice down his neck. Ahhhhh, I can see it all now....
Smacksie, The Spitoon.

At least, there'd be a use for 'im......

> can you supply some name of good antenna!

Most Radio Schloque antennas are pretty much the
same in materials: aluminum. Their #20-176
claims to be chrome-coated brass, while #20-043
claims stainless steel.

Of the three materials, aluminum is most easily
attacked by the elements, while chrome is next.
And once there is a pit in the chrome, the brass
will go like melted butter.

Stainless steel is impervious to most acids
and electrolytic processes and generally lasts
the longest. However, inspect all the materials
if you can. Make note of those clamps and other
hardware that might not be stainless steel.

Then decide on which one to snag.

I just wanted to through my 2 cents in. I have the 91 and love it.
It picks up the seattle system with no trouble. Sure the speaker is
whiny but that's an easy fix (attach an external speaker) The unit is
on sale now for the low price of 170 give or take a few bucks. I
would recommend this unit to anyone who already has a gazillion
channel scanner and just wants one for the purpose of listening to the
trunked system. Take care Keith

I agree with you that this is probably not the proper way to connect the radios to an antenna, but I was able to pick up a distant amateur radio repeater that I am familiar with and I can say that it is normally a weak (but readable) station. I was feeding the scanners with a discone antenna. I used this antenna because it was easy for me to switch it over for use with amateur radios. (yes I disconnected the scanners before tranmitting on it.)

PL is the Motorola trade name for CTCSS or Continuous Tone Coded Squelch System. It is used to lock out unwanted signals from other users of the same frequency elsewhere. It also helps to reduce interference created by intermod and other spurious noises. These inaudible tones unlock the squelch on the users radio and are filtered out so that only the intended transmission gets through. Usually you cannot hear the tones on your scanner either, but sometimes they can produce a whine or humming sound.

You're alleging I'm Bill Cheek? Sorry to burst your bubble. I'm on my own. Please feel free to add me to your twit filter. For whatever it's worth, I always post under the same handle within rec.radio.scanner. If someone wants to filter me out of their reader so they won't be forced into obsessively clicking on my posts; have at it. I routinely foster that option by keeping to the same screen handle. No sense in mucking up anyone's twit list. There's plenty of game running around the filters to keep me amused. I don't have to go looking for it.

Can you cite an example of this ? (a statistically significant one).
I can invite you down to my DPW garage we've got 2 MARKED units which
were demolished in rear end collisions by assholes who couldn't stop
in time. Traffic safety estimate the speed of the vehicle which hit
them (based on skid marks), as being about 62 mph - in a posted 45
mph zone.

What's a "slow driver" to begin with ? someone obeying the posted
speed limit ?

>How about the accidents caused by morons who drive slower than the
>other traffic, while camping out in the left lane?

What's the cause of the accident ? the slow driver or the idiot
who can't control his own speed ? In this example both operators
would be at fault. The leadfoot for going too fast, and the other
driver for not keeping right.

>Seems to me, your best bet for better enforcement of the speed laws,
>would be to stop driving around doing wannabee duties, and get those
>old oil changes done on the cars driven by REAL cops back on the
>road quicker!

Yepper, I'm a real wannabe... I have long hair, and a goatee and look
like an outlaw biker.... yep clean cut cop wannabe, who drives an old
80's Buick....

You people remind me of the assholes who want to pollute my breathing
air in public restaurants. The "hell with the rights of others as long

as I'm free to do what I want" attitude. I'll bet you support the right of smokers to foul up the air in government buildings too (the "I paid my taxes, so I should be able to smoke here" logic). The hell with the other non smokers who might be breathing in the foul carcinogenic second hand smoke, and getting the smell permeated in their clothes. They should give you the 'right of way', and leave the area, right ?

As I said before, your rights end, where the rights of others begin.

Actually, the Florida Attorney General has ruled that to be considered "installed" the radio would have to be connected to BOTH an external antenna and the vehicle's power supply, so a handheld connected to one or the other is fine.

And, while there are some exemptions in the law, there are none for EMS, FD or PD personnel in their privately owned vehicles. Silly as it may sound, they are not allowed.

Licensed hams and media folks are allowed to have scanners in the car, however.

You're going to have to walk me through this one. How does the fringe
activity "reduce" the ability to "use the news group"? I mean the
actual mechanics. Do you mean something like a user wades into RRR
looking for a technical tidbit, catches a peek of the fringe activity,
and becomes discombobulated to the point that they forgot what they came
here for?" Could be. Those are precious people; they need to be
protected from the rough edges of the USENET. But that's not my job.
You may *think* it's my job, or *your* job; but I don't agree.

>>Unfortunately, one participant of this ego war namely John Mackey has

> show of absolute disrespect.

Hope he does not resort? That's his standard MO! You don't have any idea who's Mackey and who's not. I've nailed down a few of his personas: "RadioFan, compania, rcl@aol.com, etc." But I really don't know how far it goes. I thought I did. But as a regular audience member, I now realize that friggin' loon has too many different sets of "funny eyeglasses and noses" to track. Lately I've been answering posts allegedly written by myself. Such is the nature of the USENET; especially the unmediated side. I'm amused. You, obviously, are not.

I feel for ya about that filter thingy. If it's any consolation; you can stick my handle in your filter and it won't come out again. If you want a sanitized view of the NG, I respect your decision and won't interfere with the proper operation of your twit filter.

PRE-EMPTIVE MACKEY COMMENT RESPONSE:

I don't have to prove or provide anything.

You friggin loon.

I live in Maine and have found skipping frequencies quite interesting to listen to. I am a fire dispatch buff and love listening to tone-outs of different departments. The two frequencies I have found so far are 33.700 and 33.900 MHZ. I was wondering if there were any other frequencies that skipped a lot during the summer that are fire dispatch frequencies??

Thanks...

>what's so bad about two scanners on the same antenna?

From the Scanner Equipment column I wrote
in 9/1997 Monitoring Times magazine:

"You have one antenna and two scanners. How can you connect them
together so both scanners can use the same antenna simultaneously?
Your first inclination may be to use a $3 "Tee" connector,
an inexpensive but poor solution. Two scanners connected
together without isolation will interact with each other
in at least two ways:

1. Local oscillator energy from one radio can be coupled into
the other, causing birdies.
2. The front end bandpass filtering in one receiver
can "load down" the other receiver, radically reducing sensitivity.

A receiver multicoupler, more commonly known as a "splitter,"
permits one antenna to be shared by two or more receivers.
Unlike a simple T connector, a good multicoupler provides
a degree of isolation between the receivers.
Some signal loss is inherent in any multicoupler,
so it may not be suitable for reception of very weak
signals unless an amplifier is added to compensate for the loss..."

It also works with multiple antennas the same way. In practice a broad band
antenna like a scanner antenna exhibits wide swings of impedance up and down
the band - coupling two togther should be less problem than coupling TV
antennas together - there is no complex AM video signal to "ghost". Multipath
```

can be a problem, but wire in a $3 TV splitter, hook the two antennas in and see what happens.It's not like there's a transmitter to fry here. At worst you can use the same wiring and replace the splitter with a $3 switch if the results with the splitter are bad! It won't take long to compare the problem signals that only come in on one antenna or the otherto see if they all are there with the two hooked together.

There is a lot of VHF propagation in the summer time. Especially early in the morning. Last night I listened to a police department on 154.860 that was well over 100 miles away. The most likely cause for this kind of skip is called troposheric ducting. Ducting is even more common in coastal areas. 100 miles is typical distance that will result from ducting but sometimes you can hear signals from several hundred miles away.

>Is anyone aware of a software SCA decoder for use with a Hamcomm-type
>interface?

Think! Think what you are asking for here. After a SCA-encoded FM
signal went through a Hamcomm data slicer, what would be left for
software to decode from? Data slicing is NOT the first step in decoding
SCA, and doing it to the baseband signal doesn't get you any closer.

Now, a Hamcomm interface on the _output_ of a SCA decoder, for decoding
certain types of digital SCA signals, that has possabilities.

A couple of nights ago I heard two officers discussing another officer's conduct on one of the Sheriff's Department tac channels. It was really late at night, probably between 3 and 4 AM, and the officer telling the other officer what he heard quoted several lines of profanity, which is unusual on a repeater (trunked 800 system here). Great entertainment, but unfortunately I forgot exactly what was said. I do remember that the officer being discussed was quoted as saying "I'll just leave this fucking department then". Woke me up good! Of course I used to hear tons of cussing on the county refuse collection talkgroup a couple years ago. Open mikes are also good for producing great listening, especially when it's a police car with an argumentative prisoner in the back.

Also witnessed my 24th pursuit last night. Stolen Toyota van going 60 mph through well-lit downtown streets. I saw it from a corner. Awesome! Finally, I've heard a couple of pursuits that ended in bad crashes, and when the pursuee crashed I heard "Shit!" or "Oh shit!". The first time that happened I was listening with a friend of mine and he was literally ROFL face down on the floor! Since the only person who crashed was the suspect and no officers were involved, I laughed my ass off too.

Yeah, but UHF is more fun. I talked to a guy in Connecticut on 464.100 with 100

GMRS radios do and can legally operate in 7 of the lower FRS
frequencies. They were GMRS splinter frequencies to begin with and
are shared with FRS. It's not clear if GMRS and FRS units can legally
talk to each other but most opinions I've read seem to think it's ok.

1826. What To Buy? Scanner For Winston Cup Racing - Advice Needed

Newsgroup: rec.radio.scanner
Date: 1998-06-14 00:00:00 UTC
From: pferris@ionet.net
Message-ID: <9806142237.AA18201@mohawk>

Dear Scanner Guru's:

Here's today's query-

I'm planning to attend the Fall NASCAR Winston Cup race at Talladega. This has me considering my scanner options / WANTS / and needs. For full effect, one MUST have a scanner at the track!

A friend suggested I get one of the new Yeasu handheld rigs - right at $300. And it transmits too. Naturally, I have a license (N5KBD). But really, I'd just rather have a real scanner. I don't care about xmit capabilities.

I'm the proud owner of an AOR AR-1500. It's a helluva radio. But not quite handheld, but not impossible either. Problem is, I don't want to have to tote a gel cell for power for it, too.

So, as I look through the various trade/sport rags, several companies specialize in trackside communications - for the fan as well as the driver (RaceScan and Racing Electronics seem to be the major trackside players -- but there are severael well known mail order houses too). The only thing that makes a scanner for a race track "special" is that:

1) Most often during the race, you can have 40+ cars in very close proximity to each other and to your scanner! Antenna is seldom an issue! ;-) A stub or nothing at all is preferred! Aside from the aforementioned 40+ cars x at least freqs each, there are also various vendors ("Hey Billy, get the golf cart guy to bring 20 more kegs of Bud to south concession area..."). Arrrgghh. Bleedover / adjacent rejection IS a big issue.

2) Not only is the RF noise a problem, the acoustic (car!) noise is damn near unbearable w/o hearing protection. So most racing scanners are 'audio modified' for increased output level and usually you can buy an (external) noise cancelling headset with them.

Some specifics:
##################
There seem to be two MAJOR players at the track - Uniden/Bearcat and RELM.

Uniden is very well known. However, I've never been really impressed by their quality and rejection.

RELM on the other hand, I believe, is the 'new & improved' Regency Electronics group. They show cut away photos of their units and brag about their metal shielding in every rig. Whadda YOU think?

What would you buy / bring? Let's say $300 is the limit. A Uniden? A RELM?
Or other?

So, I welcome your suggestions for makes/models and "where-to-buy" sources.

Cheers & Thanks for your time,

--Pete

The box said Windows 95 or better,...So I bought a Mac.

1827. John Mackey(KA0SSF) is known as a "5150" in California.

CALIFORNIA CODES
WELFARE AND INSTITUTIONS CODE
SECTION 5150-5157

5150. When any person, as a result of mental disorder, is a danger to others, or to himself or herself, or gravely disabled, a peace officer, member of the attending staff, as defined by regulation, of an evaluation facility designated by the county, designated members of a mobile crisis team provided by Section 5651.7, or other professional person designated by the county may, upon probable cause, take, or cause to be taken, the person into custody and place him or her in a facility designated by the county and approved by the State Department of Mental Health as a facility for 72-hour treatment and evaluation.
Such facility shall require an application in writing stating the circumstances under which the person's condition was called to the attention of the officer, member of the attending staff, or professional person, and stating that the officer, member of the attending staff, or professional person has probable cause to believe that the person is, as a result of mental disorder, a danger to others, or to himself or herself, or gravely disabled. If the probable cause is based on the statement of a person other than the officer, member of the attending staff, or professional person, such person shall be liable in a civil action for intentionally giving a statement which he or she knows to be false.

5150.1. No peace officer seeking to transport, or having transported, a person to a designated facility for assessment under Section 5150, shall be instructed by mental health personnel to take the person to, or keep the person at, a jail solely because of the unavailability of an acute bed, nor shall the peace officer be forbidden to transport the person directly to the designated facility. No mental health employee from any county, state, city, or any private agency providing Short-Doyle psychiatric emergency services shall interfere with a peace officer performing duties under Section 5150 by preventing the peace officer from entering a designated facility with the person to be assessed, nor shall any employee of such an agency require the peace officer to remove the person without assessment as a condition of allowing the peace officer to depart.
"Peace officer" for the purposes of this section also means a jailer seeking to transport or transporting a person in custody to a designated facility for assessment consistent with Section 4011.6 or 4011.8 of the Penal Code and Section 5150.

5150.2. In each county whenever a peace officer has transported a person to a designated facility for assessment under Section 5150, that officer shall be detained no longer than the time necessary to complete documentation of the factual basis of the detention under Section 5150 and a safe and orderly transfer of physical custody of the person. The documentation shall include detailed information regarding the factual circumstances and observations constituting probable cause for the peace officer to believe that the individual required psychiatric evaluation under the standards of Section 5105.

Each county shall establish disposition procedures and guidelines with local law enforcement agencies as necessary to relate to persons not admitted for evaluation and treatment and who decline alternative mental health services and to relate to the safe and orderly transfer of physical custody of persons under Section 5150, including those who have a criminal detention pending.

5150.3. Whenever any person presented for evaluation at a facility designated under Section 5150 is found to be in need of mental health services, but is not admitted to the facility, all available alternative services provided for pursuant to Section 5151 shall be offered as determined by the county mental health director.

5150.4. "Assessment" for the purposes of this article, means the determination of whether a person shall be evaluated and treated pursuant to Section 5150.

5151. If the facility for 72-hour treatment and evaluation admits the person, it may detain him or her for evaluation and treatment for a period not to exceed 72 hours. Saturdays, Sundays, and holidays may be excluded from the 72-hour period if the Department of Mental Health certifies for each facility that evaluation and treatment services cannot reasonably be made available on those days. The certification by the department is subject to renewal every two years. The department shall adopt regulations defining criteria for determining whether a facility can reasonably be expected to make evaluation and treatment services available on Saturdays, Sundays, and holidays.
Prior to admitting a person to the facility for 72-hour treatment and evaluation pursuant to Section 5150, the professional person in charge of the facility or his or her designee shall assess the individual in person to determine the appropriateness of the involuntary detention.
If in the judgment of the professional person in charge of the facility providing evaluation and treatment, or his or her designee, the person can be properly served without being detained, he or she shall be provided evaluation, crisis intervention, or other inpatient or outpatient services on a voluntary basis.
Nothing in this section shall be interpreted to prevent a peace officer from delivering individuals to a designated facility for assessment under Section 5150. Furthermore, the preadmission assessment requirement of this section shall not be interpreted to

require peace officers to perform any additional duties other than those specified in Sections 5150.1 and 5150.2.

5152. (a) Each person admitted to a facility for 72-hour treatment and evaluation under the provisions of this article shall receive an evaluation as soon after he or she is admitted as possible and shall receive whatever treatment and care his or her condition requires for the full period that he or she is held. The person shall be released before 72 hours have elapsed only if, the psychiatrist directly responsible for the person's treatment believes, as a result of his or her personal observations, that the person no longer requires evaluation or treatment. If any other professional person who is authorized to release the person, believes the person should be released before 72 hours have elapsed, and the psychiatrist directly responsible for the person's treatment objects, the matter shall be referred to the medical director of the facility for the final decision. However, if the medical director is not a psychiatrist, he or she shall appoint a designee who is a psychiatrist. If the matter is referred, the person shall be released before 72 hours have elapsed only if the psychiatrist making the final decision believes, as a result of his or her personal observations, that the person no longer requires evaluation or treatment.
(b) Persons who have been detained for evaluation and treatment shall be released, referred for further care and treatment on a voluntary basis, certified for intensive treatment, or a conservator or temporary conservator shall be appointed pursuant to this part as required.
(c) Persons who have been detained for evaluation and treatment, who are receiving medications as a result of their mental illness, shall be given, as soon as possible after detention, written and oral information about the probable effects and possible side effects of the medication by a person designated by the mental health facility where the person is detained. The State Department of Mental Health shall develop and promulgate written materials on the effects of medications, for use by county mental health programs as disseminated or as modified by the county mental health program, addressing the probable effects and the possible side effects of the medication. The following information shall be given orally to the patient:
(1) The nature of the mental illness, or behavior, that is the reason the medication is being given or recommended.
(2) The likelihood of improving or not improving without the medications.
(3) Reasonable alternative treatments available.
(4) The name and type, frequency, amount, and method of dispensing the medications, and the probable length of time that the medications will be taken.
The fact that the information has or has not been given shall be indicated in the patient's chart. If the information has not been given, the designated person shall document in the patient's chart

the justification for not providing the information. A failure to give information about the probable effects and possible side effects of the medication shall not constitute new grounds for release.

5152.1. The professional person in charge of the facility providing 72-hour evaluation and treatment, or his or her designee, shall notify the county mental health director or the director's designee and the peace officer who makes the written application pursuant to Section 5150 or a person who is designated by the law enforcement agency that employs the peace officer, when the person has been released after 72-hour detention, when the person is not detained, or when the person is released before the full period of allowable 72-hour detention if all of the following conditions apply:
(a) The peace officer requests such notification at the time he or she makes the application and the peace officer certifies at that time in writing that the person has been referred to the facility under circumstances which, based upon an allegation of facts regarding actions witnessed by the officer or another person, would support the filing of a criminal complaint.
(b) The notice is limited to the person's name, address, date of admission for 72-hour evaluation and treatment, and date of release.

If a police officer, law enforcement agency, or designee of the law enforcement agency, possesses any record of information obtained pursuant to the notification requirements of this section, the officer, agency, or designee shall destroy that record two years after receipt of notification.

5152.2. Each law enforcement agency within a county shall arrange with the county mental health director a method for giving prompt notification to peace officers pursuant to Section 5152.1.

5153. Whenever possible, officers charged with apprehension of persons pursuant to this article shall dress in plain clothes and travel in unmarked vehicles.

5154. (a) Notwithstanding Section 5113, if the provisions of Section 5152 have been met, the professional person in charge of the facility providing 72-hour treatment and evaluation, his or her designee, the medical director of the facility or his or her designee described in Section 5152, and the psychiatrist directly responsible for the person's treatment shall not be held civilly or criminally liable for any action by a person released before the end of 72 hours pursuant to this article.
(b) The professional person in charge of the facility providing 72-hour treatment and evaluation, his or her designee, the medical director of the facility or his or her designee described in Section 5152, and the psychiatrist directly responsible for the person's treatment shall not be held civilly or criminally liable for any action by a person released at the end of the 72 hours pursuant to this article.
(c) The peace officer responsible for the detainment of the person

shall not be civilly or criminally liable for any action by a person released at or before the end of the 72 hours pursuant to this article.

5155. Nothing in this part shall be construed as granting authority to local entities to issue licenses supplementary to existing state and local licensing laws.

5156. At the time a person is taken into custody for evaluation, or within a reasonable time thereafter, unless a responsible relative or the guardian or conservator of the person is in possession of the person's personal property, the person taking him into custody shall take reasonable precautions to preserve and safeguard the personal property in the possession of or on the premises occupied by the person. The person taking him into custody shall then furnish to the court a report generally describing the person's property so preserved and safeguarded and its disposition, in substantially the form set forth in Section 5211; except that if a responsible relative or the guardian or conservator of the person is in possession of the person's property, the report shall include only the name of the relative or guardian or conservator and the location of the property, whereupon responsibility of the person taking him into custody for such property shall terminate.
As used in this section, "responsible relative" includes the spouse, parent, adult child, or adult brother or sister of the person, except that it does not include the person who applied for the petition under this article.

5157. (a) Each person, at the time he or she is first taken into custody under provisions of Section 5150, shall be provided, by the person who takes such other person into custody, the following information orally. The information shall be in substantially the following form:

My name is _____.
I am a _____.
(peace officer, mental health professional)
with _____.
(name of agency)
You are not under criminal arrest, but I am taking you for examination by mental health professionals at _____
_____.
(name of facility)
You will be told your rights by the mental health staff.

If taken into custody at his or her residence, the person shall also be told the following information in substantially the following form:

You may bring a few personal items with you which I will have to approve. You can make a phone call and/or leave a note to tell your friends and/or family where

you have been taken.

(b) The designated facility shall keep, for each patient evaluated, a record of the advisement given pursuant to subdivision (a) which shall include:
(1) Name of person detained for evaluation.
(2) Name and position of peace officer or mental health professional taking person into custody.
(3) Date.
(4) Whether advisement was completed.
(5) If not given or completed, the mental health professional at the facility shall either provide the information specified in subdivision (a), or include a statement of good cause, as defined by regulations of the State Department of Mental Health, which shall be kept with the patient's medical record.
(c) Each person admitted to a designated facility for 72-hour evaluation and treatment shall be given the following information by admission staff at the evaluation unit. The information shall be given orally and in writing and in a language or modality accessible to the person. The written information shall be available in the person's native language or the language which is the person's principal means of communication. The information shall be in substantially the following form:

My name is _____.

My position here is _____.

You are being placed into the psychiatric unit because it is our professional opinion that as a result of mental disorder, you are likely to:
(check applicable)
harm yourself ____
harm someone else ____
be unable to take care of your own food, clothing, and housing needs ____
We feel this is true because
_____

(herewith a listing of the facts upon which the allegation of dangerous or gravely disabled due to mental disorder is based, including pertinent facts arising from the admission interview.)

You will be held on the ward for a period up to 72 hours. This does not include weekends or holidays.
Your 72-hour period will begin _____

(day and time.)
During these 72 hours you will be evaluated by the hospital staff, and you may be given treatment, including medications. It is possible for you to be released before the end of the 72

hours. But if the staff decides that you need continued treatment you can be held for a longer period of time. If you are held longer than 72 hours you have the right to a lawyer and a qualified interpreter and a hearing before a judge. If you are

unable to pay for the lawyer, then one will be provided free.

(d) For each patient admitted for 72-hour evaluation and treatment, the facility shall keep with the patient's medical record a record of the advisement given pursuant to subdivision (c) which shall include:
(1) Name of person performing advisement.
(2) Date.
(3) Whether advisement was completed.
(4) If not completed, a statement of good cause.
If the advisement was not completed at admission, the advisement process shall be continued on the ward until completed. A record of the matters prescribed by subdivisions (a), (b), and (c) shall be kept with the patient's medical record.

Hi Wally,
No, sorry. The 2021 doesn`t have the front end to recieve anything above
512mhz. Lots of other mods for it. Bill Cheek has three books that make
most scanners alot better.

Good Luck,
Charlie

Thanks for the suggestion, but I allready thought of that. The
problem with that is that I plan on doing this on the go from my car, and
sometimes even hotel rooms uning handheld scanners. I'd have to either
lug around a full desktop computer system, or dish out $1k for a nice
laptop with a built in soundcard. Either of which for what I want is
pretty impractical.
I've tried a VOX tape recorder, but don't like the performance. I
want to give this kind of interface a try, but don't know much about
designing circuits. I'm hoping someone out there knows something about
this and can help me.

dhunter147@aol.com (DHunter147) wrote:

Dh> what's so bad about two scanners on the same antenna?

It's like connecting two resistors of equal
resistance in parallel - the total resistance
is 1/2 the resistance of one resistor.

In the situation with scanners, the antenna
would be looking down at 1/2 the impedence
of one scanner.

In "my" experience let the market decide what it is worth, I have auctioned off my old stuff, and yes given stuff to students and such, sometimes you are suprised at what it is worth "good or bad".
Couple good auction spots, if you are thinking of selling:

www.ebay.com
www.haggle.com
www.cityauction.com

Of course they charge you a small listing fee plus a commission, but hey I have cleaned out years worth of "stuff" (someone else's treasure) using these avenues. Of course somethings have sentimental value, my first midland 23 channel CB, that I would not take any "reasonable" offer for.

good luck 'n have a blast!

http://www.access.digex.net/~cps/sca.html

Ramsey also has a decoder kit, too.

You will need a "discriminator" output from your WBFM scanner or
FM radio for the SCA receiver to function properly.

BTW: The LM565 is the same as the NE565.

you know, I tried that with tape recorders. they aren't very good at it. even hi quality ones have problems with clipping and whatnot. The *best* solution out there is a program called RecAll. It operates like a VOX recorder with a few improvements: record time is only limited by the size of your hard drive (usually 10+times what you'd get with a measly tape, yech!), and it's start and stop for VOX mode is instantaneous.

Hi all!

Is reliable to connect two antennas (a discone and a 144/432 biband)
on to a single scanner with a T-connector?

Please, send me the answer via email also.
Thanks in advance.

Albert.

Legal. But if you connect an external antenna OR external power, it becomes
illegal. Just another useless law written by our do-gooder politicians to make
it appear as if they have solved some nonexistent problem.

2 kits, built in last few weeks, in excellent condition, work flawlessly
in
there matching enclosures, with all instructions, Need to raise money
to finance A new Sony Scanner.
1. MODEL FR-1 FM Broadcast Radio has the tap for SCA., works great
very sensitive reciever, picks up many many Fm radio stations
Original price new $24:95 Case $14:95
2. MODEL TG-1 Tone Grabber DTMF Decoder Kit, Very COOL device
Plugs into your scanners ext speaker jack and when you scan
cordless
phones, and someone gets a dial tone and dials a number, this thing
instantly tells you what number they dial, Many uses.
Original price new $99:95 Case $14:95
These can be seen at Ramseys Web site Ramsey.com I think
Paid $155 new. Would like to get$100 for all and I will ship .
Thanks
David

I enjoyed that post. It had a great deal of truth about USENET. And of course, the obligatory WHACK! at you. (club tradition and all that).

But seriously dude, do you really think you've got an accurate handle on the number and names of people you've provoked? Are you sure you can remember them all? It no big deal. I'm just using you as a deserving pressure vent. I don't care how persecuted you feel. I don't give a damn what *your* point is. You're the designated twerp of the tree house.

But you vent steam too. The only difference is, that while we only require you with which to vent our evil gribblies; You need the whole friggin' USENET population to keep you properly vented. Perhaps a manisfestation of your own sexual frustration. Since you have all the charm of a sticky doorknob; you must be quite the "rejection-boy" on your local dating circuit. I guess you really need the entire USENET population to vent your frustrations.

You friggin' loon.

I tried doing this with 2 scanners and one world-band. I lost of
boatload of signal until I got rid of all the splitters and ran
dedicated coax to the radio I used most. People on this NG had advised
me on this, and their advice proved to be gold. You wouldn't believe
how much signal is lost through those splitters.

> I set up a store display and hooked up about ten scanners to a single
> outdoor antenna and had no reception problems at all.

Aaaarrrgh.......that isn't something for the
hobbyist to attempt,though. For your demo, it
didn't matter that the signals being received
were the powerful local cop shops and such,
that could be received without an antenna at
all, or a 1" wire in the back of the set, maybe.

Most hobbyists want to hear all there is to
hear around their region, and even two scanners
fed from one antenna is inferior because HALF
the signal goes to one and HALF to the other.

In your case, the signal had to be divided up
ten ways and then the mismatch loss added on
top of that.

It's fine for a store demo on the stronger
signals around town. It is not fine for the
hobbyist in most cases.

This is a 400 channel handheld scanner in mint condition. This scanner covers 25-1300 mhz, but cannot be modified for full 800 coverage. It has a host of features such as auto store and auto sort of frequencies for efficient scanning. It comes with one rechargeable battery pack and original manual. A great deal at $150.

I also have an earlier version of this same scanner with full 800 coverage. That one is mint and comes with the original manual and box. Please e-mail if interested.

That's as bad as two scanners on one antenna;
maybe worse.

First, the impedance is lowered to half (25-ohms).
Secondly, one antenna in the nearfield of another
can interact with and be interacted with to and by
the other. This interaction generally results in
a skewing of the radiation patterns.

Thirdly, there will be phase cancellations
such that some signals that could have been heard
from one antenna won't be heard at all.

Fourth, it is unlikely that two diverse antennas
can be co-located to provide any predictable
beneficial effects.

It's just not worth it.

But if you do it, first do a band scan of each
antenna on a separate receiver. Log the signal
strengths and quality of reception for several
dozen signals. Then you'll have a baseline with
with to compare the new setup.

One antenna per receiver (at a time), one run of coax good quality (no splits), good quality connectors done properly, preservation on the one outside (ie rubber tape) is a good combination. All this depends on the bands you like and your budget on what "good is".

All the above data was obtained from sources:

Arrl handbook
Bill Cheeks Scanner Mod books (1-3)
Various Navy manuals

For those who may care, we have a reader on this
newsgroup who likes to send little nastygrams
anonymously. Of course, he's stupid. Below is
the header of one of his nasties, in case anyone
needs the information.

:-)

1877. FS: PRO-2006 w/232 Interface

Newsgroup: rec.radio.scanner
Date: 1998-06-14 00:00:00 UTC
From: BOSOX <savy@ma.ultranet.com>
Message-ID: <01bd97a4$3319c700$764006d1@savy>
Source record: 157103

Very bright backlight on/off switch not dim switch, cell mods as well
as sound and data squelch. Has 232 interface, separate external box that
I personally never used. Excellent condition...

$450.00, shipped 2 day to 48 US.

Paul

1878. looking for scanner frequencies at or near Amsterdam, NY

Source record: 157105

Just FYI Radio shack is selling these for 99.99 now.

1880. UPDATED PRICE/CORRECTION

Newsgroup: rec.radio.scanner
Date: 1998-06-14 00:00:00 UTC
From: BOSOX <savy@ma.ultranet.com>
Message-ID: <01bd97a7$44a77640$764006d1@savy>
Source record: 157106

The price on this unit is 325.00 shipped anywhere in the 48. Reason
the 232 would need to be upgraded according to Bill Cheeks, it is an early
release, but it can be brought up to date. I will still include, but
basically I am selling
with no value add for the 232 interface...

Paul

Do a search on CALEA. It may not be an actual "law" but there is such
a requirement in effect now.

If you can get ahold of a pre 94 Motorola flip phone, you can do a little (easy) work to get it to read those "ticks", and it'll tell you all the info proccesed on a particular call . E-mail me back and I'll get you this info.
Rich
p.s. if you can get a hold on one of these common phones, you will be surprised at the load of tricks that you can get these phones to do!

I have a Radio Shack PRO 60 HH programmable scanner with the original antennae, a mobile magnet based and an extended portable antennae, ac power cord and dc auto cord. Original box and manual. Bought new in July 1996...used very little, still in excellent condition. 30-999MHz, 210 channels (20 channels x 10 banks - 10 monitor channels) with a scanning rate of 25 channels per sec. I paid $249.00. What is it worth today. I'm interested in selling it to get a new trunk tracker HH or base unit...trades considered.

If you want to try some computer control software try downloading the
demo version of Scancat Gold for windows from www.scancat.com

You will need an RS232 cable which is cheap enough and it will give
you a taster for minimal cost

>I've seen one I can't remember the name. ...

From SCANNER RADIO REVIEW BRIEFS:

[...]

WHAMO-10: Regency's first synthesized scanner. Appearance
more like a crystal scanner, with a single LED per channel.
User has to break off teeth on a metal 'comb' for each
channel according to a code book. See US patent 4,057,760,
granted 11/8/77. External frequency control unit DFS-5K
optional. UHF VCO reference oscillator drifts on some units.
Soldered sheet metal shields around some circuitry make
access to some components difficult for servicing. Comb
sockets prone to bad connections after moderate use. Not
recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every
feature Regency could dream of in one scanner, except
aircraft band. Idle tone bypass feature for mobile phone
stations works about 50% of the time. Weather alert feature.
Service Search in several banks. Search and Store facility
not implemented as well as BC250, but better than none.
Built in clock when radio off or in manual mode. Can be
programmed out of band. Reasonable performance, but
sensitivity could be better. Spring contacts on membrane
keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no
priority feature. Same wood-like cabinet and reasonable
performance as K500. Spring contacts on membrane keyboard
may need soldering after prolonged use.

[...]

But what happens when you, I mean the wannabee starts pulling
over people. Maybe starts raping them, using that wannabee car?

I even have had first hand experience with a wannabee that was
WORKING on a real police car, and raped and killed a young girl.

But, hey, it slowed down traffic.

Yeah, right.

What about people who have lost loved ones, from people who caused
accidents by driving too slow?

How about the accidents caused by morons who drive slower than the
other traffic, while camping out in the left lane?

Seems to me, your best bet for better enforcement of the speed laws,
would be to stop driving around doing wannabee duties, and get those
old oil changes done on the cars driven by REAL cops back on the
road quicker!

1914. Re: CE- 232 vs. opto os 456

Newsgroup: rec.radio.scanner
Date: 1998-06-14 00:00:00 UTC
From: wiggie2@my-dejanews.com
Message-ID: <6lvclc$2u2$1@nnrp1.dejanews.com>
Source record: 157191

<Just cut everything and started anew>

There are benefits to both interfaces. You can pack a OS456, CE-232, PROgramit and other mods into the same scanner if you think that one is more beneficial than the other in certain categories. When I was looking into getting a computerized scanning rig, I wasn't able to find a decent priced Pro-2004/5/6 and went with a Pro-2035. I could get the 2035 for less, get more stock channels and a faster scanning rate. I have a OS535 and PROgramit interfaces in my 2035 and 2042.

The HB-232 (or named the CE-232 later) was a handy dandy computer interface back several years ago and is still a great little device. It is in a sense a smart button pushing interface. It allows the scanner to go about its normal operation scanning through frequencies that you either programmed by yourself into the scanner, or frequencies that you programmed through the HB/CE-232 interface. The scanner's CPU grabs the freq/channel information from the memory chips. It then switches the correct BPFs (Band Pass Filter) and sends the coordinating codes to the PLL circuitry to tune in the desired frequency. The CPU then waits to see if that frequency is active. When the scanner stops on a frequency, the interface grabs information that the scanner's CPU sends to the scanner's LCD driver circuitry. It sends this information to the computer and the program then decodes it and is able to tell you what frequency the scanner is sitting on. The program then is able to search through database information and decide what agency that the frequency is associated with and displays this information on the computer screen. There are other things that the program can do concerning this database lookup also. You have the ability to have the program setup to switch on a recorder to record the transmission, delays, scripting, etc. The scripting can have the program activate other frequency banks, load other frequencies...basically it is up to you to the limit in which you can do with it. The downside of it is that when something is happening, it is a bother for the computer/scanner to be sitting there while the freqs are being downloaded knowing that you are missing some of the action. The HB/CE-232 does allow you to program the scanner's memory from databases stored on the computer. You are limited to how many channels that the scanner has though. Say that you have the stock 400 channels, then you are not going to have anymore to choose from unless you do some modifications to increase this amount. This would require some ICs and the soldering iron.

**** I have extensive knowledge of the OS535 interface, although the OS456 is much the same, please don't discredit my knowledge of the OS456 interface because some small detail of information is not exactly correct. Its just because I don't have the OS456/2006 combo and basing

my knowledge on the OS535/2035or2042 combos that I do have.****

The OS456 works a little differently than the HB/CE-232. The OS456 works similar to a VCR/TV setup. Normally you would have the cable passing through the VCR and going to the TV. You can also have the VCR play a tape which allows you to see have different programming (video tape) viewed on the TV. If you have a OS456 installed, it passes the information from the CPU to the RF circuitry when the OS456 is not activated. It is like the interface isn't even there. When the OS456 is activated it is a whole different story. The interface actually cuts off the information from the CPU and provides its own codes for the PLL circuitry and switches on/off the various BPFs. The interface completely ignores the scanner's keypad, CPU, LCD display and memory chips. The frequency information is kept in the computer. The computer sends information to the interface, the interface decodes this and sends the necessary codes to the PLL circuitry and switches to the correct BPF. The OS456 then waits to see if the freq is active, if not, then the next freq info is sent from the computer. If it is active, then the program the you have operating the OS456 give you the time of day...and then some some. It will tell you the agency, etc. along with what other information is in the database. You have some control about switching on recorders, etc. Depending on what program you have to control the OS456, you can have it do scripting other things. The good part about it is that you don't have to wait to have the computer/interface program additional freqs/channels into the scanner's memory if that is how you have it set up. All of the freq/channel info is on the computer and you can have the computer's power to manage that very efficiently. Since the OS456 isn't in the loop between the scanner's keypad and the CPU or the CPU and the memory chips, then it is unable to program the scanner's memory. Since all of the channel/freq info is on the computer, you are limited to the program's (ScanCat, Probe, ScannerWEAR, etc.) channel limit. I use Probe quite a bit. It is a great program and allows me to have 99 banks of 1,000 channels each. I essentially have a scanner with 99,000 channels. It also allows me to have 4,000 groups I do believe. So basically I have 4,000 scanners with 99,000 channels that can be programmed into each one....its just a shame that I can only have 1 of my 4,000 scanners running at a time.
The HB/CE-232 can live happily with a OS456 installed as long as the HB/CE-232 was installed in the appropriate spot. It isn't the HB/CE-232's fault, it is just that the OS456 needs to go one place and one place only. You can only use one interface at a time also. You can also install a PROgramit interface in the scanner also if you wanted to. The PROgramit interface allows you to program channels/freqs from the computer to the scanner. It is great to have in combination with the OS456 interface but is redundant if you have a HB/CE-232 installed already.
At the current moment, there is new software slated for the HB/CE-232. I have seen some indication of this software at www.steaksandwich.com and then another person has been working on some software and noted this on the newsgroups.

The OS456/535 interfaces have had other pieces of software written for
it
namely software that does the trunking (both Moto and Edacs). I also have a friend that has written software that has considerable scripting capabilities for the OS535. Information for writing your own software is readily available for both interfaces. For trunking capabilities, the OS456/535 would show a bit better benefit due to the face that it can automatically tune the PLL circuitry as the HB/CE-232 would either have to button-push this freq into memory or would have to call up the channel that the frequency has been stored to. Scripting software for the OS456/535 would have the benefit if you happen to have a "flag" frequency that would require several more channels/frequencies to be added because a certain frequency became active. The banks/freqs/channels could be added inside the computer virtually in a split second and fed to the PLL circuitry as needed. The HB/CE-232 would of course have to program these channels/freqs through the backdoor of the scanner's keypad and placed into the scanner's memory. The s-meter and CTCSS is a nice feature that comes stock with the OS456/535. Not everyone is going to want to do the programming. Not everyone is going to be happy if they even have both the OS456 and the HB/CE-232 installed in their system. If you are at that point, then it is best that you know the electronics and programming necessary to enhance the interfaces to the degree that you want.

Wiggie

>about the interfaces, I am now leaning toward the CE-232.
>And no, I have not made up my mind yet....
Well if you do not need any of the tone decoding that the 456 does
the 232 will do more and has some great dos software and the
up-comming Pro-Turbo software fro windows will be a great addition to
the 232. I have been using Pro-Turbo for a while now and it does
everything that I want it to do.
The OS-456 is easier to install but you have to realize that it is
form big company with big pockets, but from what I hear it will not
be available to much longer and you will only be able to get the Lite
version of it which does not have any of the tone decoding in it.
The CE-232 takes more work to install and if you build it from the
kit or from Bill's 3rd book you can then say " I DID IT MYSELF! "

Message-ID: <1998061516011300.MAA06131@ladder03.news.aol.com>
Source record: 156814

For Sale:

Radio Shack PRO-2004 scanner with full 800 MHz coverage

This unit has been sitting unused for the last two years. It's in good condition except that sometimes the on/off switch has to be clicked a couple of times to turn it on. I have the original box and manual. I'm offering it at what I believe is a lower price because of the "sticky" on/off switch.

$180.00

Email me if you are interested.

Message-ID: <%Bbh1.26$uC.57342@pm01nn>
Source record: 156815

Maybe I'm not reading it correctly but my search on the FCC site say
the ICOM Q7 was approved last Wednesday. Paperwork may take a week
to catch up. As of this morning ICOM tech support had no word.
I got it on reasonable authority the price will be under $250.

Anyway if anybody hears anything please holler.

If you have Netscape or Outlook Express, you can just search for an
appropriate test newsgroup by typing it in.

I don't think I should be on your killfile for politely telling you to use a
test newsgroup. If you choose to keep me there, that is your problem. I've
been in radio for eight years (going on nine next month). I feel I haven't
been rude to you, so your choice is your problem.

1947. Need help with 4 level FSK inteface

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: rsais@bigfoot.com
Message-ID: <6m3vo5$f1u$1@nnrp1.dejanews.com>
Source record: 156824

I just have assembled one 2-Level FSK interfase to work with POCFLEX software, but now I made my first 4-Level FSK intefase that came with the program documentation, but doesn't work.

When I cut the retrofeed resistor in the negative peak detector opam, is work only with A & C phases, but when all is connected the program don't decode anything!

I checked the conections, the voltajes in the peak detector opams, and one is complement of the other, the voltajes in the three modem status lines varies from +10 to +12 in DCD, from -12 to +12 in DSR and from -10 to -12 in CTS lines.

What can i do?

How can i use a 2-bit A/D converter chip from Motorola (MC68176) to obtain the phases and then feed it to the program through the COM port?

Help please!

Thanks

1959. FS:Icom PCR1000 Receiver

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: Scott Halligan <halligan@capecod.net>
Message-ID: <35858F89.97D2849@capecod.net>
Source record: 156836
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap,rec.radio.amateur.equipment,alt.radio.scanner

I have for sale an Icom IC-PCR1000 computer controlled receiver. Covers from 150 KHz to 1300 MHz all mode. Radio is approx 3 months old and in mint condition. NO MODIFICATIONS HAVE BEEN MADE WITHIN THE RADIO! Was purchased from Lentini Communications in Newington
Ct. Includes box, manual, and all accessories including software. I have

used the radio with a 486/DX4-75 MHz IBM ThinkPad sub-notebook, a 486/DX4-100 desktop, and a Pentium 200 Desktop with great success. Will include disks of third party software which the buyer will use at his/her own risk!!! For those unfamiliar with this radio, information for it is available at the URL below:

http://www.icomamerica.com/featured/

Reason for selling: I love the radio but am more geared to VHF/UHF/800 conventional and trunked monitoring. Decided I'd try to sell this when I

caught wind of the Optoelectronics Optocom.

Price: $400.00 non-negotiable, plus shipping. This radio is just about brand new, folks, and in mint shape, so I figure $100 off the new price is a pretty good deal.

Method of payment: Pre-pay with POSTAL money order only! Or, I will ship

COD Cash/Postal Money Order only. In either case, you pay all applicable

shipping charges.

Please reply to the E-mail address below only. Do not post replies to the newsgroups! Thanks for reading.

I don't notice a MAJOR problem with mine. It's a 6v 600ma pack. I
get a couple of hours out of it. I found a 4.8v 1200ma pack (EBP-34N)
but I'm not sure if it will fit. That would solve the problem nicely.

As I understand (and cannot confirm it since I don't live in Anchorage
any more) that APD has moved to a trunked *and* encrypted digital
system. If this is true, your scanner will not be able to pick up the
police activity.

Anybody else know about this?

1974. Open Letter To John Mackey

Newsgroup: rec.radio.scanner
Date: 1998-06-15 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <3585C517.4B247829@pacbell.net>
Source record: 156851

Mr. Mackey, while Iï¿½ve tried for sometime to avoid jumping into the ongoing fray between you and several participants within this news group I now feel compelled to address you directly.

First and foremost, you ARE NOT nor will EVER BE some sort of official moderator/equalizer within this group no matter how strongly you feel about it. When Cheek flames, argues, berates or otherwise expresses his opinion and/or feedback to other participants within this ng, ITï¿½S NOT YOUï¿½RE RESPONSIBILITY to respond to him or on the groupï¿½s OR any individual's behalf in any fashion whatsoever.

While I donï¿½t necessarily agree with Cheek and others in their responses, exchanges, feedback, whatever ... itï¿½s a complete dis-service to all involved to further propagate this monotonous, sometimes pathetic feud between you and the world.

I observed in total amazement at your tenacity but I have serious reservations about youï¿½re logic and motivation.

Iï¿½m not defending Cheek nor do I support him in anyway, It was clear his specifications for the most recent truce weï¿½re reasonable, fair and with youï¿½re cooperation, quite workable. You were unwilling to comply because you needed to modify it to serve your own agenda. Specifically Cheeks cannot flame anyone else. I urge to carefully re-read the second paragraph of this post and be advised,: NOBODY participating within this forum requires youï¿½re help in anyway.

While I seriously doubt you will cease and desist with this single request, you must know how wrong you are and have been. I suspect if you actually stopped posting for a couple of weeks, let the residual messages/flames/arguments age out naturally, come back on and did the following:

1.) Post only on topic

2.) Ignore Cheek and others

3.) Stop taking everything and being so personal

You might be more tolerated by youï¿½re legion of detractors. I donï¿½t really know.

From my own "unscientific research" I have determined there are approximately 5200 usenet posts floating around cyberspace from/to and/or about you, give or take a few hundred. Maybe really changing your identity is something you should consider.

Once again, I doubt you will change youï¿½re behavior, but I feel better putting the suggestions forward. As for the Mackey fans (virtual or real if any) please save youï¿½re comments.
